On the mainland another major power project is being constructed. This is the Whatshan Development on the west side of Lower Arrow Lake. This plant is designed for an ultimate capacity of 66,000 h.p. The first of the two 33,000 h.p. stages is expected to be in operation by the end of 1950. Power from this plant will be transmitted 75 miles to Vernon in the Okanagan Valley over a 138 kv. line. As Vernon and Kamloops have already been connected by the Commission with a high voltage line a large area in the interior of the Province will be served by the Commission through water-power.

Table 22 shows the rapid progress achieved by the Commission from 1947 to 1950.

TOTALS.....	168,683,738	100.0

**The Northwest Territories and Yukon.**—The Northwest Territories Power Commission was created by an Act of Parliament in 1948, to bring electric power to points in the Northwest Territories where a need developed and where power could be provided on a self-sustaining basis. By legislation passed in 1949, the Act was extended to include Yukon in its scope.

The Northwest Territories Power Commission has authority to construct and operate power plants as required in a territory having an area of over one and one-half million sq. miles. The Commission is continually investigating power needs in this large area and studying reports on hydro-electric power sites that are available. The total capital investment of the Commission as at June 30, 1950, was over \$4,700,000.

The Commission has in operation a hydro-electric power development at Snare River and power has been supplied from this plant since the autumn of 1948. A diesel generating plant is under construction at Fort Smith and plans are well under way for the construction of a diesel generating plant at Hay River. During the fiscal year 1949-50, the Commission took the necessary steps toward providing diesel electrical power for the two communities mentioned above as well as making arrangements for power from the Snare River plant to augment the electric power supply in the town of Yellowknife.

The Commission conducts investigations throughout the Territories wherever requests are made for power installations or where the Commission itself considers such investigations should be made.

The Mayo River Canyon development (see p. 540) will be constructed by the Commission.

### Subsection 3.—Private Ownership of Central Electric Stations\*

Summary statistics of privately owned central electric stations are given for the years 1939 to 1948 in Table 23.

\* Revised in the Public Finance and Transportation Division of the Dominion Bureau of Statistics.

**23.—Summary Statistics of Privately Owned Central Electric Stations, 1939-48**

Year	Power Plants	Customers	Electric Energy Generated	Power Equipment <sup>1</sup>	
				Water Wheels and Turbines	Total
	No.	No.	'000 kwh.	h.p.	h.p.

1948.....	393	937,385	25,697,293	5,837,670	6,045,218

<sup>1</sup> Exclusive of auxiliary equipment.

The predominant position of Quebec in the electric-power field can be seen from the column in Table 24 showing electric energy generated. Of the total power generated in Canada by all central electric stations in 1948, 44 p.c. was generated by privately owned or commercial stations in the Province of Quebec; this percentage decreased from 57 in 1943 as a result of the transfer in 1944 of the Montreal Light, Heat and Power Company and the Beauharnois Power Company to the publicly owned Quebec Hydro-Electric Commission.

All stations in Ontario produce less than one-half as much power as the Quebec stations and only 18 p.c. of the total for Ontario stations is produced by privately owned stations.

**24.—Privately Owned Central Electric Stations, by Provinces, 1948**

Province or Territory	Power Plants	Customers	Electric Energy Generated	Power Equipment

<sup>1</sup> One hydro-electric station in Saskatchewan, formerly included with Manitoba, is now shown with Saskatchewan although the power is consumed in Manitoba.

### Section 3.—Total Development of Electric Power from All Available Sources

In Section 1 of this Chapter total water-power resources are given with the proportion that has been so far developed. Table 4 of that Section analyses the hydraulic turbine installation by the proportions in central electric stations, in pulp and paper mills, and in other industries. This is useful material, but it does not take into account electric power developed in central electric stations or in other industries from sources other than hydraulic.

Section 2 covers the central electric station industry including those under the public ownership of provincial and municipal governments, and those under private ownership. Neither of these Sections, however, gives a complete presentation of the total electric power developed in Canada. All the hydraulic energy developed is not converted to electric power: there are a number of water wheels and water turbines used for direct drive that are not geared to electric generators. On the other hand, certain central electric stations in the Maritime Provinces and in the Prairie Provinces generate electricity from steam or internal combustion engines. It is the purpose of this Section to show the total electric power generated from all available sources. Most of the power comes, of course, from central electric stations, the figures having been given in Table 5 of Section 2, p. 548. The total kilowatt hours of electric power generated by central electric stations is divided into that generated from water power and that generated from thermal engines of all kinds.

As shown in that table the total electric power generated by central electric stations in 1948 was 42,389,681 kwh. For a complete presentation, the power generated by manufacturing industries for their own use and the power generated by the primary mining industry for use in its own operations must be added. There are a few other sources of electric energy such as electric railways which produced 11,179,700 kwh. during 1948. This production has been taken into the annual total shown in Table 25. There are numerous small lighting and power plants on farms, rural homes, summer resorts, stores, etc., where electricity from central electric stations is not available and for which there are no available data. The following table gives available data separately and as a combined total. Of the total electric power generated in Canada in 1948, 89.7 p.c. is shown to have been developed in central electric stations and of this 3.1 p.c. was generated by thermal engines (see Table 5, Sect. 2), the remainder having been produced hydraulically. Of the 10.3 p.c. generated by industry for its own use, 9.7 p.c. was developed by the manufacturing industries and 0.6 p.c. by the mining industry.

#### 25.—Total Power Generated by Central Electric Stations, Manufacturing and Mining Industries, 1938-48

NOTE.—Figures for the years 1927-37 will be found at p. 516 of the 1948-49 edition of the Year Book.

<sup>1</sup> Includes power generated by electric railways for their own use.

### Section 4.—Power Equipment in Canadian Manufacturing and Mining Industries

Table 26 shows the power equipment installed in the manufacturing and mining industries of Canada from 1941 to 1948. The figures for the eight years show that primary power increased from 2,185,050 h.p. to 2,808,650 h.p., or by 29 p.c., while the installation of electric motors operated by purchased power shows an increase of no less than 1,455,682 h.p. In considering the increase in the latter figures, it must be borne in mind that the shift from belts and shafting to individual motors at each machine does not necessarily mean that an amount of power is used equivalent to the increased capacity: there is always a margin by which installed equipment exceeds the simultaneous load.

Of the total primary power installed in 1948, manufacturing establishments accounted for 91 p.c., while of the total electric motors operated by purchased power, manufacturing accounted for 86 p.c. and mining for 14 p.c.

## 26.—Power Equipment Installed in Manufacturing and Mining Industries, 1941-48, with Details by Provinces for 1948

NOTE.—For figures prior to 1941 see corresponding tables in previous editions of the Year Book.

### Section 5.—Fuel Used in Canadian Industry

Fuel is used quite generally throughout the industrial field for the generation of power by means of steam, and internal-combustion engines. It is used also for the heating of plants and for providing the heat necessary to some manufacturing processes. The most important industries where heat is applied to materials to facilitate or accomplish a desired transformation are: foundries; brick, tile, lime and cement works; petroleum refineries; the glass industry; distilleries; food preparation plants; rubber goods industry; etc. The figures of Table 27 cover fuel used for such heating purposes and for power. Fuels that constitute the raw materials to be transformed, such as coal in the coke and gas industries, crude petroleum in the refining industry and electricity used in such metallurgical processes as the electrolytic refining of non-ferrous metals, are not included.

The value of fuel consumed in the manufacturing and mining industries in 1948 showed an increase of 102 p.c. over 1941. Of the 1948 fuel account, the requirements of Ontario amounted to 48 p.c. of the total, of Quebec 30 p.c., of British Columbia 7 p.c. and of Nova Scotia 5 p.c.

Coal is, of course, by far the most important, on the basis of dollar values, of the various kinds of fuels used in industry, and in 1948 accounted for 50 p.c. of the total.

Fuel oil ranks second with 31 p.c. and gas (manufactured gas 9 p.c. and natural gas 2 p.c.) third in importance. Gas as a fuel is particularly important in Ontario. Natural gas is obtained from the southwestern portion of the Province and coal gas from the coke plants of the steel city, Hamilton, much as the Province of Quebec draws coal gas from the coke plants at Montreal.

The use of natural gas is also relatively important in Alberta in both manufacturing and mining industries; in fact, in the mining industry Alberta used, in 1948, gas which was valued at 51 p.c. of the total value of fuel used in mining operations generally.

The use of fuel oils in industry shows a very rapid rise. Total value of consumption rose from \$19,327,851 in 1941 to \$68,576,536 in 1948.

# 27.—Cost of Fuel Used in Manufacturing and Mining<sup>1</sup> Industries, 1941-48, with Details by Provinces for 1948

NOTE.—For figures prior to 1941 see corresponding table in previous editions of the Year Book.

Year and Province	Coal	Coke	Fuel Oils	Wood	Gas	Other Fuels <sup>2</sup>	Totals

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

This Chapter deals with manufacturing industries in Canada in two Parts. Part I gives general analyses including: the historical development of manufacturing; detailed treatment of current production under various groupings and individual industries; and principal factors in manufacturing production such as capital, employment, salaries and wages and size of establishment. Part II deals with the provincial and local distribution of manufacturing production.

It is impossible to give absolutely comparable statistics over a long period of years. From 1870 to 1915 statistics were collected only in connection with decennial or quinquennial censuses, and there was inevitably some variation in the information collected. The annual Census of Manufactures was instituted in 1917 and, while numerous changes have been made since then in the information collected and the treatment of the data, an effort has been made to carry all major revisions, as far as possible, back to 1917, so that the figures for the period since then are on a reasonably comparable basis.

Canada now ranks among the important manufacturing countries of the world and holds a dominant position in the export of many manufactured products. The forward movement in development has been the result of three great influences: first, the opening of the 'west' at the beginning of the present century which greatly increased the demand for manufactured goods of all kinds, especially construction materials; secondly, the First World War which left a permanent imprint upon the variety and efficiency of Canadian plants; and thirdly, the Second World War with its insatiable demands for food and manufactured products of all kinds. More especially during the Second World War the situation created as a result of Canada's strategic position as a source of food and armaments had far-reaching effects on the magnitude and diversification of Canadian manufacturing production, with the result that Canada, with greatly increased skills and plant capacity, has now entered a new era in manufacturing development.

The manufacturing industries of Canada in 1947 established a new record in gross value of production with a total of \$10,081,026,580. This represents an increase of \$2,045,334,109 or 26 p.c. over the previous year, and \$1,007,334,061 or 11 p.c. over the previous high attained in 1944. In terms of actual physical production, however, the record is not so impressive. The increase of 26 p.c. in the gross value of production is accounted for in large part by an increase of 19 p.c. in the wholesale prices of fully and partly manufactured products, and only for about 6 or 7 p.c. by the actual increase in the physical volume of production.

Manufacturing establishments in 1947 numbered 32,714. They furnished employment to 1,131,750 persons who received \$2,085,925,966 in salaries and wages and produced goods with a selling value at the factory of \$10,081,026,580 from materials costing \$5,534,280,019. The value added by manufacture amounted to \$4,292,055,802.

From the point of view of employment, which more closely reflects changes in the physical volume of production than any other factor, the non-ferrous metal products group with an increase of 13 p.c. reported the greatest increase in production. The wood and paper products group came second with an increase of 11 p.c., followed by the miscellaneous industries group with 10 p.c., non-metallic mineral products 8 p.c., textiles 7 p.c., iron and its products 6 p.c., vegetable products 5 p.c., and chemicals and allied products 3 p.c. The animal products group reported a minor decline of 1 p.c.

Of the forty leading industries in 1947, thirty-five reported increases and only five reported decreases in number of persons employed. The electrical apparatus industry with an increase of 8,738 employees recorded the greatest gain in production. This was followed by sawmills with an increase of 6,073, furniture 5,564, pulp and paper 4,979, cotton yarn and cloth 3,427, machinery 2,917, non-ferrous metal smelting and refining 2,903, primary iron and steel 2,737, automobiles 2,190, agricultural implements 2,147, automobile supplies 2,139, men's factory clothing 1,995, planing mills 1,862, printing and publishing 1,643, synthetic textiles and silk 1,628, hosiery and knitted goods 1,570, etc. The following industries reported decreases in number of employees: hardware, tools and cutlery 934, leather boots and shoes 901, slaughtering and meat packing 810, tobacco, cigars and cigarettes 161, and railway rolling-stock 27.

Percentage changes in manufacturing production of each province between 1944 and 1947 were as follows:—

Provinces	1947 Compared with 1944			1947 Compared with 1946		
	Number of Employees	Salaries and Wages	Gross Value of Products	Number of Employees	Salaries and Wages	Gross Value of Products
Prince Edward Island.....	+ 6.7	+14.3	+18.1	+ 8.6	+17.4	+13.0

## PART I.—GENERAL ANALYSES OF MANUFACTURING

## Section 1.—Growth of Manufacturing

This Section gives a picture of the growth of manufacturing, in general, as shown by comparable principal statistics, i.e., establishments, capital, employees, salaries and wages paid, cost of materials and values of products. Other useful comparisons are made in Table 4 and figures of consumption are given in Table 5.

## 1.—Summary Statistics of Manufactures, 1917-48

NOTE.—Statistics of manufacturing from 1870 have been published, but between that year and 1917 they are not on a comparable basis to the series given below. They will be found at p. 363 of the 1943-44 edition of the Year Book. Statistics of the non-ferrous metal smelting industries were included in manufactures for the first time in 1925.

Year	Estab- lish- ments	Capital	Em- ployees	Salaries and Wages	Cost of Materials	Net Value of Products <sup>1</sup>	Gross Value of Products
	No.	\$	No.	\$	\$	\$	\$
1917.....	21,845	2,333,991,229	606,523	497,801,844	1,539,678,811	1,281,131,980	2,820,810,791

<sup>1</sup> For 1924 and subsequent years the net value of production is computed by subtracting the cost of fuel and electricity and the cost of materials from the gross value. Figures prior to 1924 are not comparable because statistics for cost of electricity are not available. <sup>2</sup> A change in the method of computing the number of wage-earners in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1925 was re-adopted. <sup>3</sup> Not collected.

<sup>1</sup> See footnote 1, Table 1.<sup>2</sup> See footnote 2, Table 1.<sup>3</sup> Not collected.

The figures in Table 4 trace the tendencies in Canadian manufacturing industries as clearly as possible through the past 31 years of development. In analysing statistics of production and materials used, price changes should be borne in mind particularly the inflation of values from 1914 through the immediate post-war period, the drop in prices of commodities during the depressions following 1921 and 1930, and the increase again in the recent war and post-war period. The figure that shows most clearly the trend of development is concerned with the use of power. The total horse-power employed increased from 1,658,475 in 1917 to 7,867,414 in 1948, an increase of about 374 p.c. in 31 years. In the same period, horse-power per wage-earner showed an interrupted trend from 3.06 to 10.82 in 1933 and 9.46 in 1939. With the large increase in the number of wage-earners on war production, and the more efficient utilization of the equipment available, the horse-power per wage-earner dropped to 6.28 in 1944; the increasing installation of power machinery and the decline in employment after the War resulted in a rise to 8.21 in 1948. The significant feature is the increase in both the absolute figures of power employed and the averages per wage-earner during the depression years as compared with 1929, although the large numbers of persons again finding employment since 1933 reduced the averages for the years 1934 to 1937 and again for 1940 to 1945. Other interesting comparisons are the trend of value added by manufacture, per employee, and of average salaries and wages paid since 1929.

Power employed.....	1,658,475	2,068,875	3,855,648	4,135,008	5,045,287	6,498,439	7,399,169	7,867,414
Averages, per establishment.....	76	92	174	174	203	227	226	235
Averages, per wage-earner.....	3.06	3.97	6.67	10.82	9.46	6.28	7.87	8.21

<sup>1</sup> The method of computing the number of wage-earners in 1925-30, inclusive, increased the number somewhat over that which otherwise would have been given. There was, therefore, a proportionate reduction in the averages for 1925-30 per employee and wage-earner. In 1931 the method in force prior to 1925 was re-adopted.

<sup>2</sup> Not collected.

<sup>3</sup> Net values of products; see footnote 1, Table 1.

**Consumption of Manufactured Products.**—One of the beneficial results of adopting the same classification for foreign trade and for production is exhibited in Table 5, where the value of commodities made available for consumption in Canada is derived from these statistics. For example, the value of all manufactured commodities made available in 1947 was \$9,884,536,356, a figure obtained by adding to the value of manufactured products the value of the imports of manufactured and partly manufactured goods and deducting the value of the exports. In this table more accurate statistics could be presented were it possible to exclude from the gross value of manufactured products the duplications involved when the products of one manufacturing establishment become the material worked upon in another. Iron, vegetable, textile, wood and paper, and animal were, in that order, the leading groups in the value of finished products made available for consumption in 1947. Vegetable, animal, wood and paper, and non-ferrous metal products were manufactured in Canada in greater quantities than required for home consumption, providing export balances in these groups.

On balance, Canada in the past imported large quantities of iron and steel, textile and non-metallic mineral products in spite of large home production. The expansion of the iron and steel, chemical and non-ferrous metals industries will enable Canada to meet more of her requirements for home consumption and to export greater quantities in the future.

5.—Consumption of Manufactured Products, Significant Years, 1929-47 and by Industrial Groups, 1947

<sup>1</sup> Figures for the years 1929-38 are for the fiscal year ended Mar. 31 of the following years; for 1939-47 they are for the calendar year. Net imports are total imports less foreign products re-exported.

## Section 2.—Value and Volume of Manufactured Products

**Value of Manufactured Products.**—In the interpretation of manufacturing values over a number of years, variations in the level of prices must be borne in mind, especially when such variations have been as great as those in the period since the annual Census of Manufactures was begun in 1917. The index number of wholesale prices in Canada, on the 1926 base, compiled by the Dominion Bureau of Statistics, stood at 114·3 in 1917, 155·9 in 1920, 97·3 in 1922, 95·6 in 1929, 67·1 in 1933, 84·6 in 1937, 75·4 in 1939 and 129·1 p.c. in 1947. Index numbers of the prices of fully or chiefly manufactured goods on the same base were: 113·5 in 1917, 156·5 in 1920, 100·4 in 1922, 93·0 in 1929, 70·2 in 1933, 80·5 in 1937, 75·3 in 1939 and 117·4 p.c. in 1947.

**Volume of Manufacturing Production.**—Since real income is ultimately measured in goods and services, the growth of the volume of manufacturing production, as distinguished from its value, becomes a matter of great significance. The important thing to know is whether consumers are getting more goods and services, not whether they are expending more dollars and cents.

The indexes of volume (Table 6) are based on quantities of manufactured products reported and the industry indexes are weighted according to the values added by manufacture. The indexes for the years 1923-31 are based on the values added in 1926. The weights and products used were changed in 1931, 1936 and then again in 1941. By thus changing the construction of the index every five years, current changes in production are reflected more accurately.

## GROSS AND NET VALUES OF PRODUCTION, 1948

(IN INDUSTRIES WITH OVER \$60,000,000 NET)

(CLASSIFIED BY NET VALUE)

An analysis of the volume of manufactures since 1929 in relation to population and exports shows that the decline in the depression preceding the Second World War was due chiefly to reduced exports and a cessation in production of capital equipment. As a result of expansion during the War, the physical volume of production in 1943, when production was at an all-time high, was 77 p.c. above 1939 and 85 p.c. above 1929. The chemical and allied products group, with an increase of 262 p.c., reported the greatest production expansion since 1939. This was followed by the iron and its products group with an increase of 222 p.c., non-ferrous metal products 130 p.c., miscellaneous industries 68 p.c., non-metallic mineral products 56 p.c., animal products 40 p.c., textiles and textile products 34 p.c., vegetable products 25 p.c., and wood and paper products 21 p.c. There was also an increase in the volume of consumer goods. As was to be expected, the increase was not so great as that for production of equipment and supplies needed by the Armed Forces. Drink and tobacco increased by 51 p.c., food 27 p.c. and clothing 25 p.c.

In 1946 the index of the physical volume of production at 150.3 represented a drop of 19.9 p.c. from the high mark attained in 1943. Chemicals and allied prod-

ucts had the sharpest decline of 65.2 p.c., followed by iron and its products with 44.7 p.c.; non-ferrous metal products 39.1 p.c.; miscellaneous industries 9.3 p.c.; and textiles and textile products 4.4 p.c. The wood and paper, vegetable, non-metallic mineral and animal products groups on the other hand reported increases in the volume of production. The volume of consumer goods continued to rise with the books and stationery group reporting an increase of 28.3 p.c., followed by drink and tobacco with 26.3 p.c., personal utilities 25.4 p.c., house furnishings 15.8 p.c., food 11.9 p.c. and clothing 5.0 p.c. Industrial equipment and producers materials were both down with declines of 25.7 and 15.1 p.c., respectively. Vehicles and vessels had the greatest decline of 52.1 p.c.

The index for 1947 has not yet been compiled. This will be done as soon as the indexes for 1940 to 1946 have been revised in accordance with supplementary information now available.

#### 6.—Indexes of the Volume of Manufacturing Production, according to Component Material and Purpose Classifications, 1929-46

(1935-39=100)

NOTE.—The indexes for 1940 to 1946 are being revised in the light of supplementary information now available.

##### COMPONENT MATERIAL CLASSIFICATION

Year	Vegetable	Animal	Textiles	Wood and Paper	Iron	Non-ferrous Metal	Non-metallic Mineral	Chemicals	Miscellaneous	All Industries

### Section 3.—Production by Industrial Groups and Individual Industries

For the purposes of the Census of Manufactures, the main detailed analysis is made under a classification in which industries are grouped according to the chief component materials of the goods manufactured. Statistics of individual industries are presented in detail in the report "Manufacturing Industries of Canada, 1947" pp. 20-25. Less detailed analyses are given under the standard classification grouping in Tables 10 and 11, the purpose grouping in Table 12 and origin grouping in Table 13.

#### Subsection 1.—Manufactures Grouped by Chief Component Materials

Table 8 shows the recovery after the depression, the impact of the Second World War and the post-war developments upon the main groups of industries with regard to the numbers employed, the salaries and wages paid, and the gross value of products. These figures should be related to those of Table 6 which shows changes in volume of production. The number of employees in 1944 increased by 86 p.c.

over 1939 as compared with an increase of 70 p.c. in the physical volume of production. Salaries and wages paid were 175 p.c. higher and the gross value of production 161 p.c. higher. Another significant change was the increase in the proportion of women engaged in manufacturing. Whereas in 1939, there were 281 females to every 1,000 males employed, in 1944 this figure jumped to 403.

Significant changes in the nature of manufacturing production took place after the end of the War in 1945. Industries engaged in war production operated at a substantially lower level, while industries producing consumer goods stepped up their production. From the point of view of employment the chemical and allied products group, with a drop of 53 p.c., experienced the greatest decline in production between 1944 and 1947. Iron and its products was second with a drop of 36 p.c., followed by non-ferrous metal products with 8 p.c. and miscellaneous industries 8 p.c. The wood and paper products group reported the greatest gain with an increase in employment of 31 p.c., followed by non-metallic mineral products with 24 p.c., textiles 15 p.c., vegetable products 10 p.c. and animal products 8 p.c. For manufacturing as a whole there was a drop of 8 p.c. in the number of employees with an increase of 3 p.c. in salaries and wages paid. Although there was a drop in the physical volume of production the gross value of products increased by 11 p.c., due to the rise in the wholesale prices of fully and partly manufactured products.

**8.—Percentage Variations in Employment, Salaries and Wages, and Gross Value of Products in the Main Industrial Groups, Compared for Significant Years, 1933-47**

Industrial Group	1939 Compared with 1933			1944 Compared with 1939		
	Em- ployees	Salaries and Wages	Gross Value of Pro- ducts	Em- ployees	Salaries and Wages	Gross Value of Pro- ducts
Vegetable products.....	+31.9	+ 52.1	+ 52.6	+ 31.4	+ 76.4	+ 92.6
Animal products.....	+30.6	+ 46.9	+ 70.4	+ 35.8	+ 89.4	+136.4
Textiles and textile products.....	+26.5	+ 47.1	+ 40.5	+ 26.5	+ 82.8	+ 99.1

### Subsection 2.—Manufactures Classified on the Standard Classification Basis

To provide information of maximum usefulness and to allow for a direct comparison of statistics collected by many government departments and agencies, an interdepartmental committee was set up in 1945 to review the different systems of classification in use and to recommend a standard classification to be used by all government departments in their statistical compilations.

Tables 9 and 10 give statistics for 1946 and 1947 of the manufacturing industries on the standard classification basis recommended by the committee. This classification conforms in large measure to that now recommended by the United Nations Statistical Commission.

### 9.—Principal Statistics of Manufacturing Industries, Classified on the Standard Classification Basis, 1946 and 1947

NOTE.—Comparable figures for 1945 are given at p. 604 of the 1948-49 Year Book.

Year and Group	Estab- lish- ments	Em- ployees	Salaries and Wages	Cost of Materials	Net Value of Products	Gross Value of Products

**Subsection 3.—Manufactures Classified by the Purpose of the Products**

Changes in the type and variety of Canadian manufacturing production are shown by the following table. The producers materials group accounted for 33.2 p.c. of the total gross production in 1947 as compared with 32.5 p.c. in 1939. Industrial equipment also advanced from 15.2 p.c. in 1939 to 17.0 p.c. in 1947 and vehicles

and vessels from 8.0 p.c. to 8.6 p.c. The household furnishings and miscellaneous groups also advanced slightly in this comparison, but all other groups—food, drink and tobacco, clothing, personal utilities, and books and stationery—declined.

**11.—Principal Statistics of Manufacturing Industries, classified according to Purpose of Principal Product, by Main Groups, 1939, 1944, 1946 and 1947**

#### Subsection 4.—Manufactures Classified by Origin of Materials

The distinction made between farm materials of Canadian and of foreign origin is based on whether materials are indigenous to Canada rather than on their actual source. Thus, the industries included in the foreign origin classes are those

depending upon materials that cannot be grown in Canada, such as tea, coffee, spices, cane sugar, rice, rubber, cotton, etc. Industries included in the Canadian origin classes may, however, be using large quantities of imported materials.

The mineral origin group includes, in addition to non-ferrous metals so largely produced in Canada, the manufactures of iron and steel, of petroleum, and of other mineral substances, the raw materials for which are very largely imported. Products of mineral origin, with the exception of fuels, are nearly all durable goods. A high standard of living and advanced industrial organization is usually indicated by a relatively large production and consumption of mineral products. During periods of depression when the production of capital goods is curtailed, employment in the industries of the farm group, which produce mainly consumer goods, exceeds that of the mineral group. The industries of the mineral group in 1947 employed the largest number of persons, and paid out by far the highest amount in salaries and wages. The average salary and wage was \$2,092 for the mineral group and \$1,621 for the farm origin group.

**14.—Principal Statistics of Manufacturing Industries, classified according to Origin of Material Used, by Main Groups, 1939, 1944, 1946 and 1947**

Year and Origin	Estab- lish- ments	Em- ployees	Salaries and Wages	Cost of Materials	Net Value of Products	Gross Value of Products

**Subsection 5.—Manufactures Classified by Type of Ownership**

The present study is the second on the type of ownership under which Canadian manufacturers operate. The figures for 1947 include those for the fish-curing and -packing industry which were not available for the 1946 study. For this reason the figures for the two years are not strictly comparable. However, the inclusion of this industry in 1946 would not have altered materially the percentage distribution of individual ownership, incorporated companies, etc.

Of the 32,734 establishments operating in 1947, 15,195 were under individual ownership, 5,280 were partnerships, 11,222 were incorporated companies and 1,037 were co-operatives.

As is to be expected the smaller establishments, regardless of the type of products manufactured, are carried on under individual ownership. Industries conducted

on a small scale contain a large number of establishments in this category, the percentage decreasing as the scale of operations increases, as shown in the following statement.

Group	Average Number of Employees per Establishment	Percentage of Individual Ownership Establishments to the Total
Wood and paper products.....	19.1	57.8
Animal products.....	22.9	38.1
Vegetable products.....	23.9	59.0
Miscellaneous industries.....	29.4	32.2
Chemicals and allied products.....	37.3	21.0
Non-metallic mineral products.....	41.6	32.1
Textiles and textile products.....	54.7	26.3
Iron and its products.....	106.7	25.5
Non-ferrous metal products.....	120.0	21.5
ALL GROUPS.....	34.6	46.4

The establishments operating under individual ownership are not as important from the point of view of employment provided as their large numbers would indicate. According to Tables 15 and 16, these establishments which comprised 46 p.c. of the total only had 8 p.c. of the total employees. Incorporated companies are by a very wide margin the most important factor in the employment field.

**Subsection 6.—Leading Manufacturing Industries**

In the following statement, the rank of the ten leading industries in 1947, from the standpoint of gross value of production, is compared with their respective ranks in significant years since 1922.

Industry	Rank in—							
	1947	1946	1944	1939	1937	1933	1929	1922
Pulp and paper.....	1	1	5	2	2	1	1	2
Slaughtering and meat packing.....	2	2	1	3	3	3	2	3
Non-ferrous metal smelting and refining.....	3	3	2	1	1	2	9	1
Sawmills.....	4	4	11	8	7	14	5	4
Electrical apparatus and supplies.....	5	7	8	9	8	16	8	17
Automobiles.....	6	9	7	5	4	11	4	6
Flour and feed mills.....	7	5	12	7	5	4	3	1
Butter and cheese.....	8	6	10	4	6	5	6	5
Petroleum products.....	9	8	14	6	9	6	10	9
Primary iron and steel.....	10	13	13	11	12	31	16	20

<sup>1</sup> Did not rank among forty leading industries in 1922.

A prominent feature of Canadian manufacturing development during the past 20 years has been the rapid growth of non-ferrous metal smelting. This industry, based upon the rich base metal resources of the country, has now taken its place among the leading manufactures along with the industries based upon forest, agricultural and live-stock resources. The incidence of the depression resulted in a rearrangement in the ranking of many industries;<sup>1</sup> in some cases this has proved to be temporary. Under the impetus of war production, the industries engaged in producing the equipment needed by the Armed Forces, such as shipbuilding, aircraft, automobiles, miscellaneous chemical products, and primary iron and steel, advanced to higher positions. With the end of the War in 1945, the industries engaged in the production of consumer goods, by reason of the heightened demand for their products, bettered their position. Pulp and paper after a lapse of a number of years resumed its premier position. A notable feature in 1947 was the advance of the primary iron and steel industry from thirteenth to tenth place, automobiles from ninth to sixth place, and electrical apparatus and supplies from seventh to fifth place. Women's factory clothing dropped from tenth to thirteenth place, flour and feed mills from fifth to seventh place, and butter and cheese from sixth to eighth place.

<sup>1</sup> On a broader classification basis, the primary textile industry, which includes the production of cottons, woolsens, synthetic textiles and silk, hosiery and knitted goods, the dyeing and finishing of textiles, narrow fabrics and cordage rope and twine, ranks first in number of employees, first in salaries and wages paid and second in gross value of production.

## Section 4.—Salaries and Wages in Manufacturing Industries

Statistics of earnings and hours of work of wage-earners and salaried employees in manufacturing will be found in Chapter XIX, Labour.

In 1947, 32,734 establishments were covered, and 191,100 salaried employees and 940,650 wage-earners, a total of 1,131,750 persons, were employed. Out of every 1,000 persons employed in manufacturing 169 were classed as salary-earners and 831 as wage-earners; the former earned 23 p.c. and the latter 77 p.c. of the total amount paid out as remuneration for services.

A notable feature during the past few years was the reduction in the disparity between average annual salaries and wages. Whereas in 1939 average annual wages were only 56 p.c. of average annual salaries, in 1943 the percentage rose to 76 and declined to 69 in 1947. This tendency towards equalization was, in part, due to the controls adopted by the Government during the war years which tended to stabilize salaries more so than wages. The increase in average wages was also influenced by the fact that large numbers of wage-earners were employed in the highly paid iron and steel industries and by the increase in number of hours worked, some of it at overtime pay.

### 19.—Total and Average Salaries and Wages Paid in Manufacturing Industries, Significant Years, 1917-47

Year	Salaries				Wages			
	Salaried Employees		Total Salaries	Average Salaries	Wage-Earners		Total Wages	Average Wages

1947.....	135,248	55,852	474,693,800	2,484	721,407	219,243	1,611,232,166	1,713

<sup>1</sup> The averages of wage-earners and earnings for the years 1931 to 1947 are strictly comparable with those for the years up to 1925 but not with those for the intervening years. The figures for the latest years—as for the earliest—represent the earnings for complete man-years of work, with no allowance for periods of unemployment. The difference amounts only to about 3 or 4 p.c. in the total figures and affects chiefly the seasonal industries.

Ontario has a larger proportion of females among its salaried employees than the other provinces. The same situation prevails in Quebec with regard to wage-earners, due, no doubt, to the textile industries of the Province. The importance of the textile industries in providing employment to females is strikingly illustrated by the fact that, of all female wage-earners engaged in the manufacturing industries of Canada in 1947, 41 p.c. were found in the textile group.

The average salary in 1947 amounted to \$2,484, which was \$738 or 42.3 p.c. higher than in 1939. Salaried employees in Ontario with \$2,581 were the highest paid. Those in Quebec were second with \$2,517, British Columbia third with

\$2,403, and Manitoba fourth with \$2,319. The fact that head offices of many large corporations are located at Montreal, Toronto, Winnipeg and Vancouver tends to raise the average salaries in the provinces in which these cities are located.

**20.—Total and Average Salaries and Wages Paid in Manufacturing Industries, by Provinces and Industrial Groups, 1947**

Chemicals and allied products.....	6,956	3,965	28,231,140	2,585	21,627	5,943	49,248,579	1,786
Miscellaneous industries...	2,799	1,608	10,728,720	2,434	11,269	7,898	27,813,547	1,451

The average wage in 1947 amounted to \$1,713 which was \$738 or 75.7 p.c. higher than in 1939. The manufacturing industries of British Columbia paid the highest average wage of \$1,934, followed by Ontario with \$1,792, Alberta \$1,657, Saskatchewan \$1,643, Manitoba \$1,634, Quebec \$1,601, etc. The high figures shown for Yukon and Northwest Territories in regard to average wages are due to the unusual conditions under which industry is carried on in these regions and are not representative.

**Average Annual Earnings in the Forty Leading Industries.**—In only five industries, bridge and structural steel, pulp and paper, breweries, automobiles, and non-ferrous metal smelting and refining, were average salaries above \$3,000 in 1947. In fifteen others they ranged between \$2,700 and \$3,000. These industries, in descending order, were: woollen cloth, primary iron and steel, men's factory clothing, petroleum products, women's factory clothing, synthetic textiles and silk, cotton yarn and cloth, automobile supplies, boxes and bags, paper, brass and copper products, railway rolling-stock, aircraft, iron castings, hosiery and knitted goods, and shipbuilding and repairs. In fifteen others they ranged between \$2,000 and \$2,700, while in the remaining five they were below \$2,000. The sawmill and butter and cheese industries with \$1,089 and \$1,454, respectively, paid the lowest salaries.

# 21.—Salaries and Wages Paid in the Forty Leading Industries, 1947, with Comparative Figures of Average Salaries and Wages Paid in 1946

NOTE.—Industries ranked according to the aggregate salaries and wages paid.

Industry	Salaries					Wages

<sup>1</sup> Average salaries and wages paid in the forty leading industries in 1946; the list of leading industries in that year was not quite the same as the list for 1947.

Wages, above \$2,000, were paid in ten industries, in all of which the proportion of skilled workers is high and the proportion of female workers is low. The pulp and paper industry with \$2,443 was the highest in this group, followed by automobiles with \$2,337, non-ferrous metal smelting and refining \$2,218, petroleum products \$2,159, primary iron and steel \$2,149, shipbuilding and repairs \$2,149, railway rolling-stock \$2,114, aircraft \$2,100, iron castings \$2,026 and breweries \$2,023. In seventeen other industries average wages ranged between \$1,500 and \$2,000, while in the remaining thirteen they were below \$1,500. This latter group includes industries made up of a large number of small establishments in which the proportion of female workers is high.

**Average Annual, Weekly and Hourly Earnings.**—In comparing earnings by provinces or groups, consideration should be given to the type of industries in each case since the distribution of industries has a very definite regional significance. In some industries a labour force possessing deftness and speed or the ability to exercise muscular strength is necessary, in others the labour force must exercise craftsmanship or possess a high degree of technical knowledge. Workers in the latter industries naturally command relatively higher wages than those employed in industries whose employees are routine workers.

The ranking of provinces and industries as regards annual earnings is in many cases different to that of weekly or hourly earnings since the factors of number of weeks worked per year and number of hours worked per week enter into the picture. So that, while in general the same observations apply, a close study of the differences between the averages shown in Tables 20 and 21 will be of value.

The figures for the years 1939 to 1947 given in Table 22 are based on an analysis of a pay-list covering one week in the month of highest employment. For this reason the figures do not refer to any particular month, since the month of highest employment might be May for one firm and October for another; they represent the summation of the different months of highest employment as reported by all the firms. For a particular industry, however, the month of highest employment is more significant as in such case it coincides for a great number of firms engaged in the same industry. The figures for 1946 and 1947 are based on returns received from establishments employing 15 hands or over and refer to the last week in the month of November.

Average weekly earnings of male wage-earners for manufacturing as a whole amounted to \$41.35 in 1947, an increase of \$19.12 or 86.0 p.c. as compared with 1939. Average hourly earnings advanced from 46.2 cents in 1939 to 92.1 cents in 1947, an increase of 99.4 p.c. Annual earnings at \$1,909 were 77.4 p.c. higher.

Female wage-earners received on an average \$23.11 per week in 1947, an increase of \$10.33 or 80.8 p.c. over 1939. Hourly earnings in 1947 at 58.2 cents were 105.6 p.c. higher, while annual earnings at \$1,067 were 72.4 p.c. higher compared with 1939.

## 22.—Average Annual, Weekly and Hourly Earnings of Male and Female Wage-Earners, Employed in Manufacturing Industries, 1939-47

NOTE.—Butter and cheese factories and fish-curing and -packing plants are excluded in the years 1939 to 1945, while sawmills are also excluded in 1945. By including sawmills, weekly earnings in 1945 would have been about \$34.35 for male wage-earners.

Year	Average Earnings			Hours Worked per Week
	Annual	Weekly	Hourly

**Real Earnings of Employees.**—When the index number representing the average yearly wages is divided by the index number of the cost of living, on the same base, a measure of “real” wages is obtained. Index numbers for 1938 to 1947 are given in Table 25.

**25.—Average Yearly Earnings, and Index Numbers of Earnings, Cost of Living and Real Wages of Wage-Earners, in Manufacturing Industries, 1938-47**

NOTE.—Figures for 1931-37 are given at p. 581 of the 1948-49 Year Book.

Year	Wages Paid	Average Wage-Earners	Average Yearly Earnings	Index Numbers (1935-39=100)		
				Average Yearly Earnings	Cost of Living	Real Value of Average Yearly Earnings
	\$	No.	\$

**Percentages of Salaries and Wages to Net Value of Products.**—Table 26 shows the relation between salaries and wages paid by manufacturers and the total net value of production. Figures of gross production are often used in such calculations.

tions, but the values out of which the wages of employees must come in the long run are the values added to the raw materials while they are in the factory. Such added values constitute the real production of the manufacturing plant and are alone available for payment of salaries and wages, interest, rent, taxes, repairs, and all other overhead charges that ordinarily must be met. The percentage declined steadily with the increasing manufacturing production from 1924 to 1929, while from 1931 to 1935 and again in 1938 and 1939, due to decreased industrial activity, the percentage of salaries to value added was above normal. It should be borne in mind, however, that salaried employees increased 173 p.c. during the period 1924-47 while wage-earners increased 125 p.c. The percentage of wages has fluctuated much less than that of salaries. The number of wage-earning employees may be more rapidly adjusted to the activity of the industry and wage levels likewise may be more readily adjusted to the price levels of the products. Of the increase in the net value of production since 1939, 49 p.c. was passed along in increased salaries and wages.

<sup>1</sup> Equivalent to "net value of products"; see footnote 1, Table 1, p. 576.

## Section 5.—Size of Manufacturing Establishments

The size of the manufacturing establishment is generally measured either by the value of product or by the number of employees, but each of these methods has its limitations. The former measure has to be adjusted for changes in the price level and, as between industries, it makes those in which the cost of raw materials is relatively high appear to operate on a larger scale. The latter takes no account of the differences in capital equipment at different times or in various industries and obviously the increased use of machinery may lead to an increase in production concurrently with a decrease in number of employees.

**Size as Measured by Gross Value of Products.**—In 1929, the 719 establishments producing over \$1,000,000 each had an aggregate value of products of \$2,516,064,954, or 62 p.c. of the total for all manufacturing establishments. In 1931 the number of plants in that category dropped to 482, their output being valued at \$1,451,658,954, or 53 p.c. of the total. However, by 1944, war demands resulted in an increase and the number of plants with a production of \$1,000,000 rose to

1,376 with an output of about 75 p.c. of the total value of manufactures. In 1946, after the end of the War and the decline in production of the huge war plants, manufactures of establishments with a production of \$1,000,000 or over declined to 67 p.c. of the total although the number increased to 1,442. In 1947 the number rose to 1,716 and their contribution to the total to 72 p.c.

<sup>1</sup> Includes central electric stations and dyeing, cleaning and laundry establishments.  
of Yukon and the Northwest Territories.

<sup>2</sup> Exclusive

**Size as Measured by Number of Employees.**—In 1929, establishments employing 501 hands or over accounted for 27 p.c. of the total number of employees engaged in manufacturing. The tendency then in evidence of increasing concentration of production into larger units was checked by the depression, the percentage dropping in 1933 to 21 p.c. (central electric stations included) but rising again to 26 p.c. in 1939. The same also holds true for establishments employing 101 hands or over. In 1929 they employed 62 p.c. of the total, in 1933, 56 p.c., and in 1939, 62 p.c.

The effect of the War on the concentration of industries into large units is illustrated by the increase in the number of establishments employing 500 hands or over. In 1939 such establishments numbered 172 and employed 26 p.c. of the employees engaged in manufacturing. By 1944 the number had increased to 383 and the percentage of total employees to 47. In a further subdivision of this group in 1944 it was found that 226 establishments employed between 500 and 999 persons, 56 between 1,000 and 1,499, and 101 employed over 1,500. Altogether there were 12 plants employing over 7,000 persons, the largest having an employment of a little over 13,000.

In 1947 the size of establishment declined. Those employing 1,500 or over numbered only 58 as compared with 100 in 1944 and 80 in 1945. The largest manufacturing plant in Canada, which employed over 13,000 persons in 1944, employed about 12,000 in 1947.

**Size of Establishment in Leading Industries.**—Table 30 summarizes the degrees of concentration in some of the leading industries of Canada. Concentration is extremely marked in the case of automobiles, railway rolling-stock, non-ferrous metal smelting and refining, rubber goods, cotton yarn and cloth, pulp and paper, and primary iron and steel; whereas in the case of bread and bakery products, sawmills, miscellaneous foods, fish-curing and packing, butter and cheese, and women's factory clothing, the degree of concentration is low. This concentration is analysed in detail for each of the twenty-five leading industries in the tables following.

## 30.—Percentage Importance of Establishments, each Employing 200 or more Persons in the Leading Industries, 1947

Industry	Number of Such Establishments	Percentage of Total Number in the Industry	Percentage of Total Production in the Industry

## PART II.—PROVINCIAL AND LOCAL DISTRIBUTION OF MANUFACTURING PRODUCTION

## Section 1.—Distribution of Manufacturing Production

Ontario and Quebec are by far the most important manufacturing provinces of Canada. Their combined production in 1947 amounted to \$7,920, 521, 948 or 79 p.c. of the total gross value of manufactured products. The proximity of Ontario to the coalfields of Pennsylvania, the water power and other varied resources of the two provinces, and their nearness to the larger markets of Canada and the United States have all contributed to the above result.

Table 1 shows the outstanding predominance of Ontario and Quebec in each industrial group. Quebec leads in the manufacture of textiles, but in each of the other groups Ontario has the greater production. British Columbia accounts for 19 p.c. of the gross production of the wood and paper products group compared with 35 p.c. for Ontario and 34 p.c. for Quebec. In each of the other groups Ontario and Quebec lead by a wide margin.

The degree of concentration of manufacturing production in large units is illustrated in Table 2. In the Provinces of Quebec and Ontario 37 p.c. of all persons engaged in manufacturing were employed in establishments having 500 or more employees, as compared with 34 p.c. for Canada as a whole. Nova Scotia ranked third with 32 p.c., followed by New Brunswick with 28 p.c., British Columbia 25 p.c., Manitoba 22 p.c., and Alberta 13 p.c. There were no plants in either Prince Edward Island or Saskatchewan with an employment of 500 or more persons.

### 2.—Concentration of Manufacturing Production in each Province, 1947

### Subsection 1.—The Manufactures of the Maritime Provinces

In Prince Edward Island the predominant fishery and agricultural resources make fish-curing and packing and butter and cheese the leading manufactures of the Province. Nova Scotia is renowned for its coal mines and its fisheries as well as extensive forests and agricultural lands and is favoured with easy access by sea to the high-grade iron-ore supply of Newfoundland. On these resources are based the leading manufactures of fish-curing and packing, primary iron and steel, sawmills, shipbuilding and repairs, pulp and paper, and butter and cheese. In addition, important petroleum refineries and coke and gas plants add to the diversification of manufacturing in the Province. The forests of New Brunswick give a leading

place to its pulp and paper and sawmilling industries, while fish and agricultural products add to the varied output. Sugar refining and the production of railway rolling-stock also form important branches of manufacturing production.

### 3.—Statistics of the Leading Industries of the Maritime Provinces, 1947

<sup>1</sup> Individual statistics cannot be given because there are fewer than three establishments in each industry. Such industries are: in Prince Edward Island—starch and glucose, castings and forgings, sheet metal products, fertilizers, cotton and jute bags and slaughtering and meat packing; in Nova Scotia—cotton yarn and cloth, wire, coke and gas, and petroleum products; in New Brunswick—sugar refineries, railway rolling-stock, cotton yarn and cloth, synthetic textiles and silk, veneer and plywoods, breweries, shipbuilding, and brooms, brushes and mops.

## Subsection 2.—The Manufactures of Quebec

Quebec contributes about 30 p.c. of the total value of manufactured products of Canada. Quebec's forests, water power, minerals, and agricultural lands, and also its geographic position astride the St. Lawrence estuary permitting sea-going vessels to reach its main centres of population, are among the assets that have tended to develop manufacturing industries. In addition, Quebec has a stable and industrious population, which is an important factor in industries such as textiles, clothing, leather boots and shoes, etc., where a large labour force is required. The production of pulp and paper occupies the premier position, accounting for about 11 p.c. of the gross value of Quebec manufactures and about 49 p.c. of the Canadian total for this industry. Other industries in which Quebec predominates are: tobacco, cigars and cigarettes with 91 p.c. of the Canadian total; cotton yarn and cloth 70 p.c.; synthetic textiles and silk 67 p.c.; women's factory clothing 67 p.c.; leather boots and shoes 62 p.c.; men's factory clothing 59 p.c.; fur goods 49 p.c.; railway rolling-stock 48 p.c.; and hosiery and knitted goods 42 p.c. Quebec is an outstanding manufacturing province by reason of her large individual industries and not so much on account of a great diversification of manufacturing activity.

## 4.—Statistics of the Leading Industries of the Province of Quebec, 1947

NOTE.—Sugar refining is also one of the leading industries but statistics cannot be published because there are fewer than three establishments.

## Subsection 3.—The Manufactures of Ontario

The gross value of the manufactured products of Ontario in 1947 represented about 49 p.c. of the total for all Canada. This premier position in manufacturing has been fairly uniformly maintained by Ontario, as the following percentages show: 1926, 52 p.c.; 1918, 53 p.c.; 1910, 50 p.c.; 1900, 50 p.c.; 1890, 51 p.c.; and 1880, 51 p.c. In spite of the rapid industrial development in recent years in other provinces, such as Quebec, British Columbia and Manitoba, Ontario has maintained a manufacturing production roughly equal to that of the remainder of Canada.

The geographic position of Ontario on the Great Lakes waterway system, by means of which the iron ore of Minnesota and the coal of Pennsylvania are readily accessible; the wide range of natural resources of forests, minerals, water power, and agriculture; a large population and excellent water and rail transportation facilities to other parts of the country have all encouraged industrial development. Other factors have been proximity to one of the most densely populated sections of the United States and the establishment within the Province of branch factories of such United States industries as automobile manufacturing.

Ontario also has the greatest diversification of manufacturing production of any province. Certain industries, such as the manufacture of automobiles, agricultural implements, starch, bicycles and carpets, are carried on practically in this province alone. Other important industries in which Ontario leads, with the percentage which the production of each bears to that of the 1947 Canada total are: miscellaneous non-ferrous metal products 97, abrasives 90, soaps and washing compounds 89, leather tanneries 86, rubber goods 83, cordage, rope and twine 80, woollen yarn 80, clay products from imported clay 78, primary iron and steel 76, electrical apparatus and supplies 73, aluminum products 71, salt 70, toilet preparations 61, coke and gas products 61, acids, alkalis and salts 56, flour and feed mills 54, hosiery and knitted goods 52, glass and glass products 49, and furniture 48.

## Subsection 4.—The Manufactures of the Prairie Provinces

The leading industries of the Prairie Provinces are those based on agricultural resources—grain-growing, cattle-raising and dairying areas. Next in importance, generally, are industries providing for the more necessary needs of the resident population, such as the baking of bread, printing and publishing, etc. The extensive railway services require large shops for the maintenance of rolling-stock, especially in the Winnipeg area. The widespread use of motor-vehicles and power machinery on farms has given rise to petroleum refineries in each province. The greatly increased production of crude petroleum in Alberta seems likely to lead to further development of the refining industry. Manitoba, as the early commercial centre of

the prairies, has had a greater industrial development than either of the other provinces. Its natural resources of accessible water power, forests and, more recently, minerals, have given rise to quite a diversification of industrial production.

Considering the Prairie Provinces as an economic unit, slaughtering and meat packing had the largest gross value of production in 1947, amounting to \$178,235,386, followed by flour and feed mills with \$119,264,565, butter and cheese \$75,351,366, and petroleum products \$57,649,999. These four industries accounted for 49 p.c. of the total production of the Prairie Provinces. Other leading industries, in the order of importance, were: railway rolling-stock, breweries, bread and other bakery products, sawmills, printing and publishing, stock and poultry feeds, planing mills, men's factory clothing, miscellaneous foods, cotton and jute bags, etc.

<sup>1</sup> Other leading industries, individual statistics for which cannot be given because there are fewer than three establishments in each industry are: Manitoba; non-ferrous metal smelting and refining, pulp and paper, and bridge and structural steel; Saskatchewan; non-ferrous metal smelting and refining, cotton and jute bags, wood preservation, and vegetable oil mills; Alberta; cement, wood preservation, malt and malt products, sugar refineries, processed cheese, fertilizers, bridge and structural steel, vegetable oil mills, condensed milk, paper boxes and bags, and glass products.

## Subsection 5.—The Manufactures of British Columbia

British Columbia with a gross value of production of \$858,284,592 in 1947 was again the third most important manufacturing province in Canada. About 25 p.c. of that amount was contributed by the sawmilling industry, followed by pulp and paper, fish processing and meat packing. Shipbuilding, which occupied first place during the war years, was in fifth place in 1947. At the height of its productive effort in 1943 it employed 31,238 persons who were paid \$64,939,484 in salaries and wages, while the value of production reached the unprecedented figure of \$155,536,396. In spite of its decline, the shipbuilding industry in 1947 was still the second largest employer of labour and also paid out the third highest amount in salaries and wages. Other important industries include: fruit and vegetable preparations, fertilizers, veneer and plywood, petroleum products, butter and cheese, etc. The varied resources of the Pacific Coast have resulted in a wide diversification of its manufactures.

## 7.—Statistics of the Leading Industries of the Province of British Columbia, 1947

20 Other leading industries <sup>1</sup> .....	7	5,319	12,291,171	84,765,479	25,150,560	112,297,436
<b>Totals, Leading Industries.</b>	<b>2,071</b>	<b>65,933</b>	<b>135,462,475</b>	<b>394,238,224</b>	<b>328,074,449</b>	<b>735,248,846</b>
<b>Totals, All Industries.....</b>	<b>3,040</b>	<b>83,161</b>	<b>167,282,667</b>	<b>453,670,677</b>	<b>388,702,178</b>	<b>858,284,592</b>

<sup>1</sup> Includes distilleries, non-ferrous metal smelting, vegetable-oil mills, sugar refineries, and bridge and structural steel.

## Subsection 6.—Manufacturing Industries in Urban Centres

The prosperity of most of the cities and towns of Canada, especially in the east, is intimately connected with their manufacturing industries, which provide employment for a large proportion of their gainfully occupied population. In the west the cities are more largely distributing centres, though manufactures are rapidly increasing there also.

Table 8, indicating the extent to which the manufacturing industries of Canada are concentrated in urban centres, shows by provinces the proportion of the gross manufacturing production contributed by cities and towns having a gross production of over \$1,000,000 each. In the more highly industrialized provinces of Ontario and Quebec such cities and towns in 1947 accounted for 93.8 p.c. and 92.6 p.c., respectively, of the totals for those provinces, while in the Maritime Provinces and British Columbia, where sawmilling, fish packing, and dairying are leading industries, the proportions fell to 63.3 p.c. and 59.6 p.c., respectively. In the Prairie Provinces manufacturing is confined largely to a few urban centres.

**8.—Urban Centres, each with a Gross Manufacturing Production of over \$1,000,000. Number of Establishments and Production in such centres as a Percentage of the Total, by Provinces, 1947.**

NOTE.—Statistics published in this table are in some cases higher than the figures published in Table 11, since, the table below includes statistics of towns with less than three establishments and production of over \$1,000,000 each. It was not possible to publish this information in Table 11 without disclosing the operations of individual establishments.

Province or Territory	Urban Centres with a Gross Production of over \$1,000,000 each	Establishments Reporting in Urban Centres Producing over \$1,000,000 each	Total Production in Urban Centres Producing over \$1,000,000 each	Total Production in each Province	Production in Urban Centres as a Percentage of Total Production in each Province

# CHAPTER XVIII.—CONSTRUCTION

## CONSPECTUS

	PAGE		PAGE
SECTION 1. THE GOVERNMENT AND THE CONSTRUCTION INDUSTRY.....	631	SECTION 2. CONSTRUCTION OF DWELLING UNITS IN CANADA.....	638
Subsection 1. Public Contracts.....	631	SECTION 3. CONTRACTS AWARDED AND BUILDING PERMITS ISSUED.....	639
Subsection 2. Government Aid to House Building.....	634	SECTION 4. ANNUAL CENSUS OF CONSTRUCTION.....	644

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

The purpose of this Chapter is to co-ordinate available official statistics on the construction industry and to give, as far as possible, a complete picture of construction from year to year. Official statistics, although constantly undergoing improvement, have many gaps and it is necessary to try to bridge these by presenting data from outside sources. For instance, Section 3 carries official figures of building permits issued in leading cities. These figures are useful but have definite limitations and are supplemented by data from outside sources. This Section also contains data from a private source on construction contracts awarded during specified years. These are in the nature of a forecast of the amount of construction work contemplated in a given year. Usually some time elapses after contracts are awarded before work actually is begun and, in the case of contracts of large-scale undertakings, the work is seldom finished within one year.

On the other hand, the official statistics of the annual Census of Construction given in Section 4 cover work of all kinds actually completed in a given year but even the Census of Construction is not all-inclusive. Work done by farmers, which in the aggregate must be considerable, is not included nor is much of the construction work done by railways and other public institutions. So far as the latter groups are concerned an attempt is made in Section 4 to calculate a net figure which, when added to the annual Census of Construction figure, will more nearly approximate total construction (except that done by farmers and other individuals for themselves).

## Section 1.—The Government and the Construction Industry

### Subsection 1.—Public Contracts

Government contracts are let by the various Government Departments, Crown Corporations and other agencies in accordance with the Public Works Act. This Act sets out the regulations pertaining to tender calls, acceptance of bids and approval by the Governor in Council or by the Minister or head of the department or organization concerned.

### The Trans-Canada Highway

The first Federal-Provincial Conference on the Trans-Canada Highway was held during December, 1948, under the Chairmanship of the Minister of Mines and Resources. At this Conference all the Provinces expressed a desire to co-operate in every way and investigations proceeded on both ministerial and technical levels.

The Trans-Canada Highway Act was passed and assented to on Dec. 10, 1949. A second Federal-Provincial Conference was held on Dec. 15-16, 1949, at which sufficient details were discussed and agreed upon to enable the drafting of a uniform agreement to be completed.

Under the terms of the Trans-Canada Highway Act the Minister of Resources and Development\* is authorized to enter into Agreements with the provinces for the construction of this Highway. Contributions may be paid to a Province for new construction up to 50 p.c. of the cost of that construction to the province as determined by the Governor in Council. Similar contributions up to 50 p.c. of the cost to the province as determined by the Governor in Council may also be paid to a province for work done between April, 1928, and the date of the passing of the Act if such work is later incorporated as part of the Trans-Canada Highway. Before contributions can be made for either new or prior construction an agreement must be signed. The total federal contribution is limited to \$150,000,000.

The Trans-Canada Highway is the largest federal-provincial joint project initiated to date and is a major step in the development of a national highway system in Canada. The Act calls for the Highway to be completed by December, 1956.

A third Federal-Provincial Conference was called on Apr. 25, 1950, for the purpose of signing the Agreement. Ontario, Manitoba, British Columbia, Prince Edward Island, Saskatchewan and Alberta signed at the conference table. Nova Scotia indicated its willingness to sign at a later date but Quebec declined to sign because, in that province's opinion, the Agreement did not include sufficient guarantee for the protection of the rights of the Province of Quebec. New Brunswick and Newfoundland, respectively, signed on May 27 and June 23, 1950.

Under the terms of the Agreement each province designates the route of the Highway within its own borders, provided that adjacent provinces agree on locations where it crosses provincial boundaries and that routes selected are the *shortest practical east-west routes*.

The standards will be such as to produce a hard-surfaced two-lane highway, with pavement widths of 22 and 24 feet; ample shoulder widths, bridge clearances and sight distances; low gradients and curvature; eliminations of railway grade crossings wherever possible; and a load-bearing capacity of 9 tons for one axle.

The Special Projects Branch of the Department of Resources and Development is charged with the responsibility of the Trans-Canada Highway from the federal standpoint. It administers the Trans-Canada Highway Act and the federal engineering work relating thereto. It deals with details of routes, after these have been designated by the provinces, and advises the Minister if the definition has been complied with. The Branch is responsible for dealing with and checking all specifications for new work including grading, bridges, and paving; it inspects prior construction to determine the extent of federal contribution and, if appraisals are necessary, arrives at figures of final cost; it passes on all tender calls issued, and after examination, recommends the Minister's approval of contracts awards by the provinces.

The Special Projects Branch in all cases sees that federal interests are protected. At least one field office is maintained by the Branch in each of the provinces that have signed agreements.

\* The Department of Resources and Development was established after the reorganization of the Federal Government Departments on Jan. 18, 1950.

The actual construction for the Highway is under the direct control of the Provincial Highway or Provincial Public Works Departments.

The total length of the Highway, including all provinces, is estimated at 4,933 miles. However, two provinces—Quebec and Nova Scotia—have not at this date finally designated their route. The total mileage in the provinces that have signed the Agreement is 4,119, or if Ontario chooses an alternate route via Thessalon, it would add 136 miles. The mileage estimated for each province is 610 for Newfoundland, 90 for Prince Edward Island, 375 for New Brunswick, 1,297 for Ontario, 299 for Manitoba, 461 for Saskatchewan, 295 for Alberta and 692 for British Columbia. There is also a total of 83 miles of the Highway in the National Parks.

**The 1950-51 Trans-Canada Highway Program.**—The Federal Government's program for 1950-51 is to make a beginning on the construction of the Highway as a joint project in co-operation with the provinces under the Trans-Canada Highway Act. To this end an amount of \$20,000,000 was placed in the Estimates and passed by Parliament to cover federal contributions during 1950-51.

The portion of the \$20,000,000 Vote that may be contributed to provincial construction in 1950-51 depends on the extent to which the provinces have work ready and are able to let contracts. Construction work on the Highway has already begun and all of the eight provinces that have signed the Agreement are actively engaged in arranging their programs for this fiscal year. By June 21, 1950, almost all of these provinces had received federal approval on contracts let for work to commence at once. By that date the provinces had initiated work amounting to \$11,200,000.

In the National Parks through which the Highway runs, an active survey program is planned for 1950-51 by the Development Services Branch. The Highway through the Parks will be constructed entirely with Federal Government funds.

### Subsection 2.—Government Aid to House Building\*

**Federal Government Assistance, 1950.**—Federal Government aid to house-building, as at the middle of 1950, was provided under six measures:—

- (1) The Canadian Farm Loan Act, 1927.
- (2) The Veterans' Rental Housing Program of the Central Mortgage and Housing Corporation.
- (3) The Veterans' Land Act, 1942.
- (4) The Farm Improvement Loans Act, 1944.
- (5) The National Housing Act, 1944.
- (6) The Department of National Defence Housing Program for married members of the Permanent Armed Forces.

*The National Housing Act, 1944*, the Veterans' Rental Housing Program, and the construction end of the housing program of the Department of National Defence are administered by the Central Mortgage and Housing Corporation, established in 1945 as the agent of the Federal Government in the housing field.

*The Canadian Farm Loan Act, 1927.*—Under this legislation federal long-term loan assistance for housing as well as for other farm purposes is provided (see pp. 405-406 of the 1950 Year Book).

---

\* This summary was prepared by the Economic Research Department, Central Mortgage and Housing Corporation.

*The Veterans' Rental Housing Program of C.M.H.C.*—This program represents the continuation of the functions of Wartime Housing, Limited, established in 1941 to construct rental housing for war workers in congested centres (see p. 1145 of the 1950 Year Book). Post-war operations have involved the construction of dwellings for veterans and since 1947 have been carried out by Central Mortgage and Housing Corporation. With the completion of commitments undertaken in 1949 this program comes to an end.

*The Veterans' Land Act, 1942*, is administered by the Department of Veterans Affairs and provides a form of loan and grant assistance to veterans for housing as well as other purposes (see Veteran's Affairs, Chapter XXVIII).

*The Farm Improvement Loans Act, 1944*, provides for guarantees in respect of intermediate and short-term loans made by approved lending agencies to farmers for housing and other purposes (see pp. 405-406 of the 1950 Year Book).

*The National Housing Act, 1944*, as amended, provides various types of assistance to house building (see pp. 650-651 of the 1949 Year Book). Important amendments to the National Housing Act were made in 1949. An Act to amend the National Housing Act, 1944, 13 Geo. VI, c. 30, received Royal assent on Dec. 10, 1949.

Sect. 4 of the Act relating to housing for home owners was substantially revised. Prior to the amendment, the maximum amount of a joint loan was limited to the aggregate of 95 p.c. of the first \$2,000 of lending value, 85 p.c. of the next \$2,000 of lending value, and 70 p.c. of the amount in excess of \$4,000. There was provision in Sect. 4 for a higher ratio loan where the end sale-price was controlled. This higher ratio loan was based on 95 p.c. of the first \$3,000 of lending value, 85 p.c. of the next \$3,000 of lending value, and 70 p.c. of the lending value in excess of \$6,000. The amendments have done away with these graded percentages and have substituted for them a basic joint loan of 80 p.c. of the lending value of the house. The amendments contain a provision under which Central Mortgage and Housing Corporation may make a loan, in addition to the joint loan, amounting to one-sixth of the joint loan. This additional loan is made conditional upon the purchase price of the house, or its cost, being, in the opinion of the Corporation, fair and reasonable. The rate of interest remains at  $4\frac{1}{2}$  p.c. per annum, calculated half yearly, and the terms of repayment remain, generally, the same, both with respect to the joint loan and the additional loan. These amendments to Sect. 4 are calculated to reduce by about 50 p.c. the previous equity requirements for a prospective home owner assisted under the Act.

The legislation relating to loans to co-operatives contained in Sect. 4 was rewritten. The new provisions contemplate two types of co-operatives; one where the co-operative association is formed for building purposes only, with the intention that when the project is completed each member of the co-operative will own one home; and the other where the co-operative association will continue as such, both during construction and thereafter. In the case of the building co-operative, the new legislation provides for a blanket joint loan of 80 p.c. of the lending value of the whole project, with the provision that on completion and upon transfer of each house to a member, the additional one-sixth loan may be made to such member. In the case of the continuing co-operative, a joint loan of 80 p.c. is made in the first instance, with provision for the additional one-sixth loan to be made by the Corporation to the co-operative if each member of such co-operative undertakes, by separate agreement, to be responsible for his share of any deficiency that might result in the event of the mortgage being foreclosed. Prior to the amendments

being introduced, a joint loan to a co-operative association could be made only if each member undertook to be responsible not only for his own portion of the loan, but also for the amounts not paid by any other members.

The new legislation enables the Federal Government and any Provincial Government to undertake housing developments jointly. Sect. 35 provides that the Federal Government and a Provincial Government may acquire and develop land and may construct housing projects for sale or for rent. The capital and operating costs, profits, and losses on such undertakings are to be shared, 25 p.c. by the province and 75 p.c. by the Federal Government. While the legislation is broad and flexible in its terms, provision is made for regulations to be passed by Order in Council respecting the type and cost of land that may be acquired and used, the type and cost of housing that may be built, and the conditions under which such housing may be offered for sale or rent.

Sect. 17 of the Act has been amended to provide for an increase of 25 p.c. in the amount of loans that may be guaranteed for home improvement and home extension. Under the amendment the following amounts of loans may be guaranteed: for home improvement, \$2,500 for a one-family dwelling or \$2,500 for the first family housing unit and an additional \$1,250 for every other family-housing unit in the case of a multiple-family dwelling; for home extension or conversion, \$3,750 for the first family housing unit to be added and \$1,250 for each additional family housing unit to be added. Accordingly, Sect. 19 of the Act has been changed to provide for an increase of 25 p.c. in the aggregate amount of loans that may be guaranteed for home extension and home improvement. An aggregate of \$125,000,000 may now be guaranteed for these purposes instead of \$100,000 as formerly stipulated. As yet, the home improvement provisions of the Act have not been proclaimed.

**Program of the Department of National Defence.**—The Department of National Defence commenced a program of house construction for members of the Armed Forces and employees of the Defence Research Board in 1946. The Central Mortgage and Housing Corporation took over the construction operations of the 1949 housing program of the Department of National Defence, and continued in 1950.

**Federal Assistance in the Housing Program, 1935-49.**—The extent of Federal Government assistance to house-building in Canada over the period 1935-39 is shown in Table 1. The year 1935 marks the passage of the Dominion Housing Act, 1935, and the entry of the Federal Government into the housing field as such, on a continuing basis. This Act was succeeded by the National Housing Acts of 1938 and 1944, and the three Acts together account for the greater amount of federal loan assistance to house building over the period from 1935 (see pp. 650-652 of the 1950 Year Book).

The details by province and by type of assistance under the National Housing Act, 1944, for the years 1945 to 1949 are shown in Table 2. A total of 90,955 dwellings were completed in Canada (excluding Newfoundland), in 1949 (Table 3.). Two out of five buildings completed in 1949 in Canada came under one or another form of Federal Government assistance. Nearly 10,000 were built directly by the Federal Government; 23,000 were built with the aid of federal loans, including joint loans under the National Housing Act, 1944; and 3,000 were built with guarantee assistance by the Federal Government.

## Section 2.—Construction of Dwelling Units in Canada

The number of dwelling units completed in Canada during 1949 is estimated at 90,955, including 3,422 units added by conversions, compared with 79,359 units in 1947. This brings the total number of dwelling units completed in the last five years to 367,470. At the end of 1949 there were more than 58,000 dwelling units under construction in Canada. During 1948 about 79 p.c. of completed dwellings were built in urban centres and approximately 75 p.c. of all completions were single houses. It is estimated that about 32 p.c. were for rental purposes and the remainder were built for owner-occupancy. The following tables summarize the results of surveys conducted by the Dominion Bureau of Statistics and the Central Mortgage and Housing Corporation.

### 4.—New Dwelling Units, by Type, 1947-49

## Section 3.—Contracts Awarded and Building Permits Issued

In this Section statistics are given of work actually in sight either as contracts awarded, or as building permits. These figures are related to those of work performed during the year only so far as the work thus provided for is completed and duly reported in the Census of Construction. Further, values of contracts awarded, and especially of building permits, are estimates (more often underestimates) of work to be done. Obviously these statistics and those of Section 4 cannot be expected to agree, since much work contracted for towards the end of any one year is often not commenced until the next and extends into more than one year especially as regards large contracts or contracts undertaken late in any year. The figures given are, therefore, supplementary to those of Section 4 and are valuable as showing from year to year the work immediately contemplated during the period.

**Construction Contracts.**—The figures published by MacLean Building Reports, Limited, for construction contracts awarded during 1949 showed a total of \$1,143,547,300. This amount represented an increase of 20 p.c. over the \$954,082,400 reported for 1948 and 98 p.c. over the high pre-war level (\$576,651,800) established in 1929.

Of the four main classes of construction shown in Table 6, industrial, engineering and residential showed increases of 39 p.c., 31 p.c. and 25 p.c., respectively, over those of 1948; the business class showed a small increase of 3 p.c.

Regionally, Ontario accounted for the greatest volume with total awards of \$421,098,900, or 37 p.c. of the total, followed by Quebec with 31 p.c. The greatest percentage increases over 1948 were shown by Alberta and British Columbia. Nova Scotia and New Brunswick showed decreases in 1949.

### 7.—Values of Construction Contracts awarded, 1914-49

<sup>1</sup> Nine months.

**Building Permits.**—Statistics of building permits were first collected in 1910, when the series covered 35 urban centres; in 1920 they were extended to cover 58 municipalities, including unincorporated suburban areas as, with the advent of the automobile, a growing percentage of persons working in cities were residing outside the municipal boundaries of the urban centres in which they earned their living. In 1940 the series was again extended to cover 204 municipalities. In 1948 the coverage was expanded further to include 507 municipalities. However, until plans are advanced it is felt desirable in the Year Book to maintain comparability with earlier issues by retaining the '204' list.

Building permits issued in 1949 registered an increase of 15 p.c. compared with 1948.

### 9.—Values of Building Permits issued by 204 Municipalities,<sup>1</sup> 1948 and 1949

NOTE.—Statistics for these series covering years previous to 1946 will be found in the corresponding tables of earlier editions of the Year Book. For the 35 cities marked (•) the record goes back to 1910; the 23 places marked (o) were added in 1920.

<sup>1</sup> Exclusive of the municipalities of Newfoundland.<sup>2</sup> Incomplete returns.

The indexes given in Table 10 show, as far as possible, the fluctuations in building costs and their effect upon construction work and employment. The relative proportions of material and wage costs in general building are difficult to determine since such proportions vary with the type of building and the centres studied. Pre-war experience, the result of a special study made for 15 cities, indicates that the proportions of costs of materials to costs of labour in all construction averaged two-thirds for the former to one-third for the latter. The increase in the cost of recent building operations has probably been much more than is indicated by the increase in the indexes of wholesale prices and wages shown and the proportions of these items to total costs have, no doubt, undergone some variation due to changes in types and methods of construction and to the greater use of machinery.

Four of the largest cities, Montreal, Toronto, Winnipeg and Vancouver, accounted for \$171,047,686 or 28 p.c. of this total in 1949. In 1929 the same cities showed a value of \$126,387,555.

<sup>3</sup> As reported

**Trends of Employment and Aggregate Wages Paid in the Construction Industry.**—In Table 11 the employment figures, shown on a monthly basis, reflect the fact that the industry is not as decidedly seasonal as is sometimes thought. The month of highest employment in the industry as a whole, in 1948, was July with 284,000 wage-earners and the lowest was February with 175,000

### Section 4.—Annual Census of Construction

The annual Census of Construction as taken by the Dominion Bureau of Statistics covers all construction, maintenance and repair work undertaken throughout Canada by contractors, builders and all public bodies with the exception of smaller municipalities. It also includes work done by the maintenance and repair crews of industrial plants, mines, electric power companies and commissions, etc., in organized communities where building permits are required. However, construction and repair work done by farmers and other individuals on their own structures or work not covered by permit is not included in these figures. Further, construction of railway-roadbed, maintenance and repair work on steam and electric railways, telegraph and telephone systems and the lesser public utilities is not included when such work is done by the employees of these concerns in the ordinary way. Table 12 shows the expenditures by steam and electric railways, telegraph and telephone systems with the elimination wherever possible of items that are not germane to construction, such as snow, ice, and sand removal, dismantling of property, depreciation and retirement charges. By subtracting the work sublet to contractors from the expenditures, duplication with the Census of Construction figures is eliminated.

**12.—Expenditures by Steam and Electric Railways, and Telegraph and Telephone Systems on Road Construction, Maintenance of Way and Structures and Maintenance of Equipment, together with Totals of Annual Census of Construction, 1946-48.**

**Statistics of Construction.\***—A census of construction was made by the Dominion Bureau of Statistics for 1934, but the basis of compilation was not standardized until 1935; comparable statistics are now available for the years 1935-48. Returns are received from general trade and subcontractors, owner-builders, municipalities, the Harbours Board, and Federal and Provincial Government Departments. The figures in Tables 13, 14 and 15 cover alterations, maintenance and repairs, and new construction. No direct relationship exists between the total value of construction shown in these tables, and the value of contracts awarded as indicated in Tables 7 and 8 of Section 3, p. 640. In the latter case all values are included as soon as awards are made, irrespective of whether the contract is completed or even begun in that year, whereas the following tables cover construction work carried on and actually performed in the calendar year.

\* Revised in the Construction Section, Industry and Merchandising Division, Dominion Bureau of Statistics.

## 13.—Principal Statistics of the Construction Industry, 1945-48

1948.

<sup>2</sup> Included in Federal Government Departments for

The value of work performed by the construction industry in 1948 amounted to \$1,665,561,000 as compared with \$1,256,535,677 in the preceding year an increase of 33 p.c.

The value of building construction, exclusive of trade construction, increased from \$658,383,053 in 1947 to \$825,622,000 in 1948. The construction of industrial buildings increased from \$193,053,068 to \$242,832,000 while "other building" increased from \$7,534,016 to \$39,540,000. The value of residential building advanced from \$233,303,589 to \$255,756,000, institutional from \$73,361,869 to \$121,421,000 and commercial from \$151,130,511 to \$166,073,000. Construction work involving engineering, harbours, rivers, etc., increased from \$417,664,643 in 1947 to \$577,573,000 in 1948.

In the industry as a whole, employment was provided for a total of 284,000 persons in 1948 recording an increase of 33,499 over the total for the preceding year while the aggregate of salaries and wages at \$605,496,000 was \$122,588,774 higher. The cost of materials used in 1948 was \$835,917,000 an increase in expenditure for this purpose of \$180,920,775.

### 15.—Principal Statistics of the Construction Industry, by Provinces and Disposition, 1948

NOTE.—Comparable figures from 1935 are given in the corresponding table of previous Year Books beginning with the 1937 edition.

Province or Group	Employees	Salaries and Wages	Cost of Materials	Values of Work Performed		
				New Con- struction	Alterations and Repairs	Total
Province	No.	\$'000	\$'000	\$'000	\$'000	\$'000
Prince Edward Island.....	829	1,587	2,821	4,660	764	5,424

Totals.....	284,000	605,496	835,917	1,383,553	282,008	1,665,561

<sup>1</sup> Included in Federal Government Departments in 1948.

<sup>2</sup> New construction and alterations

and repairs data available in total only for all government forces in 1948.

Table 16 classifies the various types of construction carried out in 1948. The term "Trade Construction" covers such items as bricklaying, carpentry, plumbing, heating, electrical work, etc., reported by contractors who confine themselves to a specific type of work. Details by provinces and more complete information regarding the industry will be found in the construction industry reports of the Dominion Bureau of Statistics.

### 16.—Values of New and Other Construction Classified by Type, 1948

NOTE.—Comparable figures from 1935 are given in the corresponding table of previous Year Books beginning with the 1937 edition.

### Section 1.—The Government in Relation to Labour

#### Subsection 1.—The Federal Department of Labour

The Department of Labour of Canada was established in 1900 by the Conciliation Act which provided machinery to aid in preventing and settling labour disputes, and required the Department to collect, compile and publish statistical and other information. The Department assumed, too, the administration of the Fair Wages Policy which was adopted in the same year for the protection of workmen employed in the execution of Federal Government contracts and on works aided by grants from public funds.

At present, in addition to the statutory duty of disseminating information concerning labour and industrial matters, the Minister of Labour is responsible for the administration of certain statutes; Conciliation and Labour Act, 1906; Fair Wages and Hours of Labour Act, 1935; Vocational Training Co-ordination Act, 1942; Unemployment Insurance Act, 1940; Reinstatement in Civil Employment Act, 1946; Government Annuities Act, 1908; Industrial Relations and Disputes Investigation Act, 1948; Government Employees Compensation Act, 1947; and Merchant Seamen Compensation Act, 1946.

**Fair Wages Policy.**—Wages and hours of work on contracts for the manufacture of equipment and supplies for the Federal Government and for construction were governed for some years by a Resolution of the House of Commons (1900) which was later incorporated in an Order in Council and amended from time to time. Contracts for construction are now regulated under the Fair Wages and Hours of Labour Act, 1935, and by an Order in Council of June 7, 1922, as amended

\* Except as otherwise noted, this Chapter has been prepared or revised under the direction of A. MacNamara, C.M.G., Deputy Minister of Labour, Ottawa.

Apr. 9, 1924, and May 2, 1949 and consolidated in November, 1949. Hours on such work are limited to eight per day and 44 per week except in an emergency or in special cases where exemption is granted by Order in Council; wages to be paid are those current for the type of work in the district concerned or, if there are no current rates, fair and reasonable ones determined by the Minister.

Wages and hours for work on contracts for equipment and supplies are regulated by the Order in Council of 1922 as amended on Dec. 31, 1934, and May 2, 1949. The hours on such work must be those fixed by the custom of the trade in the district where the work is performed, or fair and reasonable hours. The wages must be current or fair and reasonable, but in no event shall they be less than those established by statute or regulation of the province in which the work is being performed.

**The Industrial Relations and Disputes Investigation Act.**—This legislation came into effect by proclamation on Sept. 1, 1948, revoking the Wartime Labour Relations Regulations, P.C. 1003, in effect since March, 1944, and repealing The Industrial Disputes Investigation Act which had been in force from 1907 until suspended by the Wartime Regulations in 1944. The Act protects proceedings commenced and decisions, orders and certifications made under the wartime legislation in so far as these involves services authorized by the Act.

The Act applies only to industries within federal jurisdiction, viz., navigation, shipping, interprovincial railways, canals, telegraphs, steamship lines and ferries both international and interprovincial, aerodromes and air transportation, radio broadcasting stations, and works declared by Parliament to be for the general advantage of Canada or two or more provinces. However, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to employees within provincial jurisdiction and make mutually satisfactory arrangements with the Federal Government for the administration of such legislation by the federal authorities.

In general, the Act in its important features provides that employees and employers shall have the right to organize and bargain collectively, that trade unions may be certified as bargaining agents for groups of employees, and that trade unions and employers are required upon notice to bargain collectively in good faith. The Act provides for invoking collective bargaining negotiations and for the mediation of conciliation officers and conciliation boards in reaching collective agreements. Employees may change bargaining agents at times under conditions specified in the Act which also prescribes conditions affecting the duration and renewal of collective agreements. Collective agreements are required to contain provision for the arbitration of disputes concerning the meaning or violation of such agreements and where such a provision is lacking application may be made for its establishment. The Act prohibits unfair labour practices, i.e., the interference with or domination of trade unions by employers or interference, discrimination and coercion in trade union activity. The conditions precedent to strike and lockout action are provided in the Act. Industrial inquiry commissions may be appointed to investigate industrial matters or disputes.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the provisions affecting the appointment of conciliation officers, conciliation boards and industrial inquiry commissions, consent to prosecute and complaints that the Act has been violated or that a party has failed to bargain in good faith.

The Canada Labour Relations Board administers provisions concerning the certification of bargaining agents, the writing of a procedure into a collective agreement for the final settlement of disputes concerning the meaning or violation of such agreement, and the investigation of complaints made to the Minister that a party has failed to bargain collectively.

Detailed statistics concerning activities under the Act may be found in the Annual Report of the Department of Labour. In brief, the Canada Labour Relations Board has received 180 applications for certification since Sept. 1, 1948, 87 being granted, 36 rejected, 31 withdrawn and 26 pending as of Sept. 30, 1950.

Of the 71 industrial disputes dealt with under the conciliation provisions of the Act, 43 were settled by conciliation officers and conciliation boards, 14 were not settled, 8 lapsed and 6 were pending at Sept. 30, 1950.

### Subsection 2.—Provincial Labour Departments

Labour legislation in Canada is, for the most part, a matter for the Provincial Legislatures since it usually governs, in some respects, the contract of service between employer and employee or the contract between members of a trade union which forms the basis of the union, or it regulates conditions in local work-places. The right to contract is a civil right and the British North America Act, which distributes legislative powers between the Parliament of Canada and the Provincial Legislatures, grants to the provinces power to enact laws in relation to "civil rights" and, with certain exceptions, "local works and undertakings".

In each province, except Prince Edward Island, a special Department or Bureau is charged with the administration of labour laws. In Alberta, the Board of Industrial Relations under the Minister of Industries and Labour administers statutes concerning wages, hours and labour welfare, and the Department of Public Works has charge of factory legislation. Other provinces have Departments of Labour. Legislation for the protection of miners is administered by Departments dealing with mines.

Factory legislation in eight provinces and shops legislation in several provinces prohibit child labour, regulate the hours of women and young persons, and provide for safety and health. Other labour statutes in most provinces include minimum-wage legislation and maximum-hours laws, laws for the settlement of industrial disputes, legislation to ensure freedom of association and promote collective bargaining, and laws to provide for apprenticeship and the licensing of certain classes of workmen. The Industrial Standards Acts in Saskatchewan, Ontario, New Brunswick and Nova Scotia, the Alberta Labour Act and the Fair Wage Act in Manitoba enable the wages and hours of work agreed upon by representatives of employers and employed in designated trades to be made legal throughout the trade concerned. The Quebec Collective Agreement Act permits agreements between employers and trade unions to be made binding on all in the industry. Workmen's compensation laws in all provinces are administered by independent boards except in Newfoundland where claims for compensation are settled in the Courts. A new Act in Newfoundland similar to those in all other provinces, and providing for a Workmen's Compensation Board, has not been proclaimed.

For information regarding individual Provincial Departments of Labour, reference should be made to the annual reports of the Departments concerned or to the Deputy Ministers of Labour of the Provincial Governments.

### Subsection 3.—Provincial Labour Legislation in 1949-50

**Newfoundland.**—Seven labour Acts were passed by the Newfoundland Legislature. The *Labour Relations Act, 1950*, is similar to the Federal Industrial Relations and Disputes Investigation Act except that check-off of union dues is mandatory on an employer on the request of a member of a certified union.

The *Trade Union Act, 1950*, sets out rights and obligations of trade unions. The rules of a trade union must contain provision for an annual audit, and financial statements must be made available to all members. Certain returns must be made to the Minister of Labour, on request. Trade unions which do not comply with the Act cannot enjoy the benefits of the Act or of the *Labour Relations Act*.

The *Workmen's Compensation Act, 1950*, establishes a collective liability system similar to that in effect in other provinces. It will be administered by a three-member Board. A *Blind Workmen's Compensation Act* similar to those in several other provinces was also passed. The latter two Acts will come into force on proclamation.

A new *Minimum Wage Act, 1950*, provides for a Board equally representative of employers and workers, to make recommendations to the Lieutenant-Governor in Council as to minimum rates of wages, minimum overtime rates, and other conditions of work for any classification of employees.

The *Boiler and Pressure Vessel Act, 1949*, covers steam boilers and pressure vessels and steam, compressed gas and refrigeration plants in the Province.

The *Industrial Statistics Act, 1949*, gives the Deputy Minister of Labour authority to collect industrial statistics, including such information as amount of capital invested, and quantity of goods manufactured, as well as number of persons employed, hours of work, and rates of pay.

**Prince Edward Island.**—The *Workmen's Compensation Act, 1949*, was amended in 1950 to give the Board power to order the installation, within a fixed time, of safety devices for the prevention of accidents or diseases in any employment under the Act. Where an accident is, in the opinion of the Board, due to the failure of the employer to comply with any such order, the Board may levy upon the employer a special contribution to the Accident Fund not exceeding one-half the amount of compensation payable in respect of the injury.

**Nova Scotia.**—The *Workmen's Compensation Act* was amended to increase minimum compensation for permanent total disability from \$15 per week to \$75 per month. Compensation will not be payable at the increased rate for any period before May 1, 1950.

**New Brunswick.**—The *Municipal Employees Pension Act* authorizes a municipality, by by-law, to adopt a pension or superannuation plan for its permanent employees and to define "permanent employee" for purposes of the plan.

**Quebec.**—An *Act respecting Public Order, 1950*, provides that a professional syndicate, union of such syndicates or group of employees, is not qualified to negotiate or be a party to a collective agreement nor to be recognized by the Labour Relations Board as representing a group of employees, if it admits to its ranks members of a municipal police force or persons who are at the same time members of such police force and of a municipal department of firemen and if it is not exclusively composed of employees of the same category and in the service of the same municipal corporation.

A collective agreement between such an association and a municipal corporation which is in force when the Act comes into effect is to remain in force, with respect to salaries and other conditions of employment, for two years or for the duration of its term, whichever is less.

**Ontario.**—The *Labour Relations Act, 1950*, replaces the Act of like title passed in 1948 and continues the Labour Relations Board established under that Act. The new Act safeguards the right of association; defines and prohibits unfair practices; sets out procedure for determining the proper bargaining agent for employees; requires an employer and a certified trade union to negotiate in good faith and endeavour to reach an agreement; provides for conciliation services to assist the parties if bargaining is unsuccessful; prohibits strikes and lockouts during the life of a collective agreement; requires all agreements to provide for settlement by arbitration of disputes arising out of the interpretation of the agreement and sets out an arbitration clause which automatically becomes part of any agreement lacking such a provision.

Amendments to the *Fire Departments Act* and the *Police Act* add pensions to the matters which may be made the subject of collective bargaining between a municipal council and members of the fire department or police force.

The *Silicosis Act, 1950*, which will come into effect on proclamation, requires every person employed in an industrial process involving silica exposure, as defined by the regulations, to have a health certificate, unless the process in which he is engaged is exempted by the Minister of Labour.

**Manitoba.**—An amendment to the *Labour Relations Act* changes the section which determines the effect on certification and a collective agreement when the ownership of an employer's business passes to another employer, or when the businesses of two or more employers are merged.

Another change would allow the Minister to refer complaints of alleged violations of the Act to the Labour Relations Board as well as to an Industrial Inquiry Commission or a conciliation officer.

The *Factories Act* was amended to provide that fifteen days notice must be given to the Minister of Labour before a substantial change is made in the type of operation carried on or before alterations or additions to a factory building or equipment are begun. A permit is required before these changes may be made.

The *Workmen's Compensation Act* was amended in respect to the definition of industrial disease. The definition has now been broadened to cover any disease peculiar to, or characteristic of, an industrial process, also any of the diseases specified in the Act. Another change brought a "learner" under coverage of the Act.

The *Vacations with Pay Act* requires every employer to notify each of his employees who becomes entitled to a vacation of the date on which the vacation begins.

The *Fair Wage Act* was changed to provide that the draft schedule of wages and hours drawn up by the Fair Wage Board for public and private construction works shall be made available to the public so that representations concerning it may be made to the Minister of Labour before he approves the schedule, as well as after he has issued the order. The Minister must allow at least ten days for such representations to be made. A further amendment stipulates that the employer must pay wages in full within five days after the end of the pay period for which the wages are payable.

**Saskatchewan.**—The *Workmen's Compensation (Accident Fund) Act* was amended to shorten the waiting period before compensation may be paid for a disability. The workman may now be paid from and including the day following the accident. The minimum payment for workmen in permanent total disability cases has been raised from \$15 to \$20 a week. Benefits in death cases have been increased by raising the maximum for burial expenses from \$125 to \$175 and monthly payments to each child under 16 years are now \$15 instead of \$12 a month.

The *Trade Union Act* was amended to give the Labour Relations Board more specific authority to make Orders determining whether an unfair labour practice has been engaged in; requiring an employer to reinstate an employee discharged under circumstances determined by the Board to constitute an unfair labour practice or otherwise contrary to the Act; determining the monetary loss suffered by such employee; and requiring the employer to pay the employee the amount so determined. Where an employer disposes of his business, his employees and their new employer are bound by any subsisting collective agreement and by Orders of the Board determining the appropriate bargaining unit for such employees and requiring the employer to negotiate with the certified bargaining agent.

The *Apprenticeship and Tradesmen's Qualification Act* is a revision of the Apprenticeship Act with added provisions requiring persons other than apprentices who work in a designated trade in any city or in Estevan or Melville or within a five-mile radius of those places, to have certificates of qualification.

The *Electrical Inspection and Licensing Act* was amended to prohibit any person from making electrical installations unless he holds a licence issued under the Act.

The *Minimum Wage Act* was amended to permit the Minimum Wage Board to extend the application of the Act to groups of persons employed in an industry, business, trade or occupation instead of to the entire industry, business, trade or occupation as formerly.

Changes in the *Hours of Work Act* provide that where the weekly overtime and the total of daily overtime differ, the employer must make payment in respect of the greater amount.

**Alberta.**—Changes in the *Alberta Labour Act* provide that where a business is sold, the purchaser is bound by all proceedings relating to collective bargaining and conciliation, and employees' holidays with pay are to be computed as if their employment had been continuous; that industrial standards schedules may include terms relating to holidays with pay; that a company-dominated union may not be certified as bargaining agent; and that employees in managerial and supervisory positions and those who are members of a profession shall be excluded from collective bargaining. A Conciliation Commissioner is now to report to the Board of Industrial Relations instead of to the Minister, and, failing settlement, is given power to make recommendations as to the advisability of appointing a Board of Arbitration. Appointment of such a Board is not now automatic in cases where conciliation has failed. The Board of Industrial Relations has the responsibility of recommending, or refraining from recommending, the appointment of a Board of Arbitration. As formerly, employment of children under 15 years in factories, shops and office buildings is forbidden. Children under 15 years may not be employed now in any other employment except with the consent of the Board.

The *Quarries Regulation Act* requires the operator of a quarry to have a permit from the Director of Mines, authorizes the Lieutenant-Governor in Council to make safety regulations, provides for the reporting of accidents and for inspection, and enables an inspector to order withdrawal of workers when he finds dangerous conditions.

**British Columbia.**—The *Annual Holidays Act* was amended to change the method of computing holiday pay or pay in lieu of holidays. The amount due to the worker is now 2 p.c. of his total wages for the period of his employment in the working year. Previously, he was entitled to his regular pay for a week's work. The "working year" is now defined as at least 225 days of actual work instead of 250 days as formerly.

The *Boiler Inspection Act* now named the *Boiler and Pressure Vessel Act*, covers the inspection and registration of hot water boilers, steam boilers and of pressure vessels.

A new Act entitled the *Pension Fund Societies Act* authorizes the incorporation of pension fund societies to establish and administer pension funds for the payment of pensions to employees.

**Northwest Territories.**—An *Ordinance respecting Employment Agencies, 1949*, forbids under penalty any person to carry on an employment agency for fee or reward. It also prohibits the receipt of compensation for furnishing information with respect to employers seeking workers or workers seeking employment.

An *Ordinance respecting Billiard Rooms and Bowling Alleys, 1949*, fixes a minimum age of 18 years for employment but allows pinsetters between 14 and 18 years to be employed up to 9 p.m. with the written consent of parent or guardian.

## Section 2.—Occupations of the Gainfully Occupied Population

Detailed statistics on the occupations of the people of Canada in 1941 will be found in Vol. VII, Census of Canada, 1941. A special review of this subject, based on the 1941 Census figures, appears at pp. 1062-1073 of the 1943-44 Year Book, and further information at pp. 1168-1169 of the 1945 edition.

The following analyses of the gainfully occupied in Newfoundland are summarized from Vol. I of the Eleventh Census of Newfoundland, 1945, recently published by the Dominion Bureau of Statistics.

### 1.—Gainfully Occupied Males and Females, 14 Years of Age or Over, in Newfoundland, by Age Groups, 1945

Age Group	Numbers			Percentages of Population 14 Years or Over		
	Male	Female	Total	Male	Female	Total
14 years .....	280	68	348	0.3	0.1	0.2
15-19 years .....	10,484	4,877	15,361	9.4	4.6	7.1

## Section 3.—Employment and Unemployment

### Subsection 1.—Labour Force Surveys\*

During the War it became increasingly apparent that up-to-date information on the size and characteristics of the labour supply was a necessity. The possibility of disturbed economic conditions in the post-war period emphasized the need for a current and periodic analysis of the state of employment in Canada. It was clear that frequent periodic enumeration of the whole population would be too expensive and time consuming and that sampling techniques should be used. Designed to meet this need, the first Labour Force Survey on a sample basis was conducted in the autumn of 1945, and quarterly surveys have been carried out since that time.

A multi-stage area sampling was used involving the selection of progressively smaller sample areas, and ultimately households. Random methods of choice were used at every stage of selection so that all members of the population had an equal chance of inclusion.

The estimates of the labour force are restricted to the civilian labour force, since net strength of the Armed Forces is obtainable directly from official sources. Inmates of institutions and Indians living on reservations are also excluded because they are not in the competitive labour market.

The present sample includes about 30,000 households in over 100 different areas in Canada. These areas include the 27 cities having a population of 30,000 or over, in addition to some of the smaller cities and various rural areas. Once a year, at the midsummer survey, the sample in the metropolitan areas of cities of 30,000 and over is doubled in order to improve the estimates of inter-provincial migration obtained from the sample.

\*Revised in the Special Surveys Division in co-operation with the Labour and Prices Division, Dominion Bureau of Statistics.

The Labour Force Surveys provide a classification of persons 14 years of age or over on the basis of their activity during a specified week, which is, in each case, the week which precedes the beginning of the survey. Information on the part of the population not in the labour force is also collected. These non-workers are classified as keeping house, going to school, retired or voluntarily idle, too old or permanently unable to work.

The information gathered on the labour force is divided for presentation into two groups: (1) persons with jobs, (2) persons without jobs and seeking work.

The estimates of the persons with jobs are classified by region, sex, age, hours worked, occupation, industry and occupational status. Special estimates are given for women employed in domestic service and employed women by marital status. Included in the estimate of persons with jobs are those who worked during the survey week, as well as those temporarily absent from their jobs because of illness, vacation, bad weather, labour disputes or temporary layoffs.

The estimates of persons without jobs and seeking work are classified by region, sex, age and number of months looking for work.

The estimates obtained from the Labour Force Surveys are all subject to sampling error, which tends to increase as the size of the estimates decreases. Accordingly, the reliability of the smaller estimates is less than that of the larger estimates. Estimates of less than 10,000 persons should not be used without careful reservation.

Data in the following table for June 1, 1946 to 1950 are compiled from the results of quarterly Labour Force Surveys conducted in late May or early June of those years. The information for years prior to 1946 is taken from estimates prepared in the Labour and Prices Division of the Dominion Bureau of Statistics. These estimates were based upon 1931 and 1941 Census data rearranged according to the definitional system used in the Labour Force Surveys, the revised census benchmarks being linked with the June, 1946, survey on the basis of monthly and annual employment and unemployment data.

### 3.—Estimates of the Civilian Labour Force and its main Components, June 1, 1931-50

Year	Civilian Population <sup>1</sup> (14 years of age or over)	Civilian Labour Force 14 years of age or over						Persons not in the Labour Force (14 years of age or over)	
		Persons with jobs				Without Jobs and Seeking Work	Total Labour Force <sup>1</sup>		
		Non-Agriculture			Agri- culture				Total (with jobs)
		Paid Workers	Employ- ers, Own Account and Family Workers	Total (non-agri- culture)					
	'000	'000	'000	'000	'000	'000	'000	'000	
1931....	7,039	2,006	421	2,427	1,203	3,630	475	4,105	2,934

<sup>1</sup> Exclusive of persons in institutions, remote areas and Indian affairs.

<sup>2</sup> Include the following figures for Newfoundland: civilian population, 234,000; civilian labour force, 115,000; persons not in the labour force, 119,000.

**Main Characteristics of the Canadian Labour Force, 1931-50.\***—The population 14 years of age and over (exclusive of persons in institutions) increased, in the period June, 1931—June, 1950, by about 2,650,000 persons or at the rate of about 125,000 persons a year. The strength of the Armed Forces rose very considerably from 5,000 in 1931 and 9,000 in mid 1939 to 779,000 at June, 1944 and then fell off to 45,000 at June, 1950. Consequently, the civilian non-institutional population, which increased very little from June, 1939, to June, 1940, actually

\* For the purpose of the following comparisons Newfoundland data have been subtracted from 1950 totals: thus all statements made are on the basis of the nine older provinces.

declined in size until, in mid 1943, it contained almost 240,000 fewer persons than in 1939. During 1944 there was a small increase in the civilian population (59,000) as the rate of increase of the Armed Forces levelled off. In 1945, 1946 and 1947 the civilian population increased markedly as a consequence of the rapid demobilization of the Forces.

In contrast, the civilian labour force maintained its strength in the face of large withdrawals to the Forces during the war years (June, 1942, being 102,000 greater than June, 1941, and June, 1945, 66,000 greater), mainly by recruiting replacements from among those who would normally be outside the labour force. The group classed as "not in the labour force" usually represents a fairly constant percentage of the population, but during the war years this category reached a low point in 1943 (162,000 fewer than in 1939) increased by 74,000 between mid 1943 and mid 1944 and then moved sharply upward with the decline in wartime employment (the increase was: June, 1944 to June, 1945, 160,000; and June, 1945 to June, 1946, 381,000).

The number of civilian jobs increased markedly during the War as compared with pre-war experience (despite a decline in agricultural employment) reaching a wartime peak of 4,447,000 in June, 1943 (422,000 greater than June, 1939). After registering a decline to 4,411,000 during the readjustment period represented by June, 1945, the number of jobs continued to increase in post-war years to the all-time high, for that month, of 5,083,000 in June, 1950.

### **Subsection 2.—Employment and Unemployment Statistics of the Census**

Detailed statistics of earnings, employment and unemployment of the people of Canada as at June 1, 1941, will be found in Vol. VI, Census of Canada, 1941.

### **Subsection 3.—Employment and Payrolls as Reported by Employers, 1949\***

For over 25 years the Dominion Bureau of Statistics has made monthly surveys of employment in the eight major industries, excluding agriculture, domestic and personal service and government administration. The broad industrial groups now covered by the surveys are: logging, mining, manufacturing, construction and maintenance, transportation and storage, communications, trade, services (chiefly hotels, restaurants, laundries and dry-cleaning plants) and finance. Early in 1941, the surveys of employment were extended to cover the current earnings of those in recorded employment and, since late in 1944, monthly data have been collected on man-hours and hourly earnings also. Inquiries into the sex distribution of the persons on the payrolls of reporting establishments were undertaken on a monthly basis commencing Feb. 1, 1946, replacing the annual and semi-annual surveys of the immediately preceding years. The data are tabulated by industry, province† and larger cities.

\*Revised in the Employment Section, Labour and Prices Division, Dominion Bureau of Statistics.

†Data for Newfoundland are not yet available.

For practical reasons associated with problems of collection,\* the current inquiries are limited to firms and branches ordinarily employing 15 or more persons. The restriction results in the inclusion of industrial samples of varying size in the monthly survey, the variation depending upon the organization of the industry in large or in small units; from the equally important geographical aspect, however, much greater uniformity exists in the provincial coverage of total employees. It is important to note that in all cases the coverage is large; it is estimated that the more than 21,000 firms co-operating in the nine major industrial groups in 1949 employed approximately 82 p.c. of the total wage-earners and salaried employees in the same industries throughout Canada.

Employment continued to increase in 1949, the annual index for the eight leading industries at 196·2 (1926=100) was, however, only 0·2 p.c. above the 1948 figure, indicating some levelling-off in activity. Demand for producer and consumer goods remained at a high level as labour income and industrial production were well maintained. Reductions in the rate of income tax, extended welfare benefits and return of wartime compulsory savings all tended to bolster purchasing power. On Mar. 31, 1949, Newfoundland formally entered Confederation; data for this province are not yet available. There were 17 fewer labour disputes in 1949 than in 1948 but, the number of workers involved increased by 20 p.c., and the number of working days lost was 20 p.c. higher. The major strike in the Quebec asbestos mines was largely responsible for the substantial increase in the time lost due to industrial disputes. The devaluation of the British pound sterling led to a measure of uncertainty in some lines of business. The later devaluation of the Canadian dollar had a favourable effect upon the economy. Exports to the United States were well maintained in 1949 and the recession early in 1949, in employment in that country was not reflected to any extent in Canada.

As in preceding years, the trend of employment in Canada in the early months of 1949 was retrogressive. There was considerable recession in industrial activity at Jan. 1, repeating the seasonal movement for this time of year, when outdoor activity is curtailed and plants are shut down for the holiday season, or inventory purposes. There was further seasonal contraction in industrial employment at Feb. 1. Activity in some sections was hampered by unfavourable weather during these early months. Partly as a result of the industrial disputes in the Quebec asbestos mines, employment at Mar. 1 was slightly lower than at Feb. 1, but the index, at 188·9 was the same as the Mar. 1, 1948 figure. Seasonal curtailment in logging was largely responsible for the further decline of 1·3 points at Apr. 1.

At the beginning of May, the index started to advance with seasonal expansion in some industries, particularly construction.

The level of activity in manufacturing in 1949 was practically unchanged as compared with the preceding year; the 1949 annual index at 205·2 was 0·1 p.c. above the 1948 figure but was appreciably below the 1943 all-time maximum of 226·2. Employment in the durable manufactured goods section declined by 1·3 p.c.

---

\*The methods used in preparing the current statistics of employment and payrolls are explained in the Monthly Bulletin on these subjects issued by the Dominion Bureau of Statistics.

It is interesting to note the change in the proportion of workers reported in the two groups in the past few years. In 1939, about 40.4 p.c. of all employees in the co-operating manufacturing plants were engaged in producing durable goods. During the year of peak wartime production, 1943, approximately 57.1 p.c. of manufacturing employees were reported in durable manufactured goods. The percentage declined in subsequent years and in the year under review 47.9 p.c. of the employees reported in manufacturing were employed by plants producing durable manufactured goods.

In the non-manufacturing industries taken as a unit, employment increased in 1949 over 1948. During 1949, expansion in activity was reported in all industries with the exception of logging. Communications was the only industry in which the increase in employment was more than the advance recorded in 1948 as compared with 1947. The maximum employment figures on record in 1949 were reported in mining, communications, trade and services.

The proportion of women per 1,000 workers at Oct. 1, 1949, was 224, compared with 219 at Oct. 1, 1948, 253 at Oct. 1, 1945, and 235 at Oct. 1, 1942. In manufacturing, there was a gain of 1.7 p.c. in the number of women at Oct. 1, 1949, as compared with one year earlier; the number of men declined by 1.4 p.c. in the same period. The proportion of women in the durable goods division of manufacturing remained constant at 105 per 1,000 workers. In non-durable goods industries, the ratio of women workers per 1,000 employees increased from 344 to 350 workers. A higher proportion of women workers was reported in numerous non-durable industries, fur and fur products, textiles, tobacco and beverages being the exceptions.

There were increases in the proportion of women workers in all non-manufacturing industries with the exception of mining, construction and maintenance, and trade. Provincially, the highest proportion of women workers was in Ontario, where 241 employees out of each 1,000 reported were female workers. In the three Maritime Provinces taken as a unit, the ratio of women workers to total employees was 146 persons per 1,000 at Oct. 1, 1949. The ratios of female workers in the major industry groups are given in Table 4.

The 1949 annual index of payrolls for the eight leading industries was 214.5 as compared with 199.6 in 1948. The relatively small increase for 1949 indicates some levelling-off in wage revisions, while changes in the industrial distribution of the workers were also a factor. (See Table 6, p. 663.)

Average weekly salaries and wages continued to increase in 1949; the annual figure of \$43.05 for the eight leading industries was 7.3 p.c. above the 1948 annual average (see Table 5, p. 662). Average weekly earnings in manufacturing, at \$44.23, were 8.1 p.c. above the 1948 per capita figure for the industry.

The 1949 per capita weekly earnings in Ontario, Alberta and British Columbia, at \$44.45, \$44.67 and \$45.85, respectively, were above the average earnings for Canada as a whole; in part this was associated with the industrial distribution of the employees in the provinces. The most substantial increase in the period under review was a gain of 7.7 p.c. in the per capita earnings in Ontario as compared with 1948.

As in earlier years, the highest figure of average weekly salaries and wages for the leading cities was reported at Windsor (see Table 6, p. 663).

#### 4.—Percentage of Women Employed in leading Industrial Groups as at Oct. 1, 1944-49

Industrial Group	1944	1945	1946	1947	1948	1949
	p.c.	p.c.	p.c.	p.c.	p.c.	p.c.
Manufacturing <sup>1</sup> .....	28.3	26.0	24.1	22.9	22.6	23.2
Durable goods.....	18.8	13.8	11.7	10.9	10.5	10.5
Non-durable goods.....	40.2	37.6	35.1	34.4	34.4	35.0

Services <sup>2</sup> .....	58.2	57.6	54.4	53.6	51.5	51.6
Trade.....	49.3	46.8	41.9	40.2	39.0	38.1
Finance.....	53.9	53.3	46.7	47.1	46.9	47.5
<b>Nine Leading Industries<sup>3</sup>.....</b>	<b>27.1</b>	<b>25.3</b>	<b>23.2</b>	<b>22.0</b>	<b>21.9</b>	<b>22.4</b>

<sup>1</sup>In 1939, the proportion of female employees in all manufacturing establishments reporting to the Annual Census of Industry was 22 p.c.      <sup>2</sup>Consisting mainly of hotels, restaurants, laundries and dry-cleaning establishments.      <sup>3</sup>These industries include also logging, mining and construction in which the number of female workers is very small.

#### 5.—Man-Hours Worked and Average Hourly and Weekly Earnings in leading Manufacturing Industries, 1947-49

Industry	Average Hours Worked			Average Hourly Earnings			Average Weekly Wages		
	1947	1948	1949	1947	1948	1949	1947	1948	1949
	No.	No.	No.	cts.	cts.	cts.	\$	\$	\$
Manufacturing.....	42.5	42.2	42.3	80.3	91.3	98.6	34.13	38.53	41.71
Durable manufactured goods.....	42.7	42.3	42.5	87.2	98.4	106.5	37.23	41.62	45.26
Non-durable manufactured goods....	42.3	42.0	42.0	73.4	84.0	90.6	31.05	35.28	38.05

Statistics of average hours worked and average hourly earnings are tabulated for those industries in which considerable numbers of employees are paid at hourly rates, namely, manufacturing, mining, local transportation, building construction, highway construction, hotels and restaurants, and laundries.

The average hours worked in manufacturing were insignificantly longer in 1949 than one year earlier, this is mainly interesting because it is contrary to the trend in the past few years. The increase was confined to one-fifth of an hour in the durable goods industries. The average working time in the non-durable goods division remained the same as in 1948. (See Table 5.) In the major non-manufacturing industries for which data are tabulated, shorter working time was reported in services (hotels, restaurants, and laundries). The average working week in highway construction increased by one hour and three-tenths, and advances of two-fifths and one-fifth of an hour were reported in local transportation and building construction, respectively.

There were substantial increases in average hourly earnings in 1949. The highest average hourly earnings for the main manufacturing industries was 117.7 cents, reported in non-metallic mineral products. The hourly earnings in pulp and paper products, rubber, beverages, electrical apparatus, iron and steel products, non-ferrous metal products were above the average for manufacturing as a whole.

Statistics of average hourly earnings are tabulated for manufacturing in the provinces and leading cities. Since the collection of man-hours and hourly earnings commenced in 1944, the average hourly earnings in British Columbia, 118.4 cents,

have been the highest in Canada. In the other provinces, the average hourly earnings varied from 88·7 cents in New Brunswick to 103·3 cents in Ontario. In the larger cities, the highest average hourly earnings were reported at Vancouver, where the figure was 116·4 cents (see Table 9, p. 668).

**6.—Annual Index Numbers of Employment, Payrolls and Average Earnings of leading Industrial Establishments, with Average Weekly Salaries and Wages of their Employees, 1948 and 1949.**

Geographical and Industrial Unit	Index Numbers (June 1, 1941=100)						Average Weekly Salaries and Wages Reported

<sup>1</sup> Exclusive of Newfoundland.

<sup>2</sup> Includes the following industries: iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments, clay and glass and stone products. The non-durable group includes the remaining manufacturing industries with the exception of electric light and power.

<sup>3</sup> Mainly hotels, restaurants, laundries and dry-cleaning establishments.

# EMPLOYMENT BY ECONOMIC AREAS

1939 - 49

1926 = 100

INDEX

INDEX

The average hourly earnings in all the non-manufacturing industries for which data are tabulated were above the 1948 figures.

**Employment and Payrolls by Economic Areas.**—As previously stated, in 1949 there was an insignificant increase in the annual index of employment in Canada as a whole as compared with the preceding year. The annual employment index for 1949 was lower than the 1948 figures in Prince Edward Island, Nova Scotia, New Brunswick, Quebec and British Columbia. (See Table 7.) These were the first declines in the annual indexes since the post-war reconversion period of 1946. For all regions taken together, the annual indexes of employment for 1949 were 196.2 in comparison with 113.9 in 1939.

The indexes of aggregate payrolls continued to increase in all regions during 1949. Although new high levels were generally reached, the gains over the preceding year were less on the whole than that reported in 1948 over 1947.

The slight falling-off in industrial activity in Prince Edward Island, Nova Scotia and New Brunswick in the year under review was largely dependent on export trade. These provinces felt, early in the year, the effect of the limited buying power of some countries and later the devaluation of the pound sterling. The declines in employment were particularly marked in logging, lumber and pulp and paper industries. Employment in manufacturing generally and transportation was also at a lower level than in 1948. Production in the coal mines was uninterrupted, and the employment index for the mining industry as a whole remained constant. With the demand for new industrial and residential buildings, employment in construction was maintained at as high a level as in 1948. Increased activity in retail trade in 1949 was largely the result of the maintenance of domestic purchasing power and a busy tourist season. The average weekly earnings of employees on the staffs of leading establishments in the eight leading industries in Prince Edward Island, Nova Scotia and New Brunswick as a unit increased by 4.8 p.c., to reach \$37.71 in 1949.

#### 7.—Index Numbers of Employment as reported by Employers in Economic Areas, by Months, 1948 and 1949, with Yearly Averages, 1929, 1933 and 1939-49

NOTE.—These indexes are calculated as at the first day of each month, on the base 1926=100. The relative weights show the proportion of employees reported in each economic area to the total reported by all employers making returns in Canada at Dec. 1, 1948. Averages for the years 1921-38 are given at pp. 613-614 of the 1947 Year Book.

<sup>1</sup> Exclusive of Newfoundland.

Industrial activity was well sustained in Quebec in the year ended Dec. 1, 1949. Advances in the annual averages were reported in communications, construction, services and trade. There was a substantial decline in employment in logging, due to the curtailment in export demand. Expansion in mining in the year under review was retarded by the labour dispute in the asbestos mines, which were closed from mid-February to late in June. An insignificant decline of 0.3 p.c. was reported in the manufacturing index for the year. The annual average of weekly earnings reported in Quebec was \$41.21 in 1949, as compared with \$38.45 for 1948.

Employment continued to expand in Ontario during 1949, higher employment was reported above the 1948 figure in all eight leading industries with the exception of logging. This decline was partly a result of a falling-off in demand for wood products and partly a result of unfavourable weather conditions during the cutting periods in 1949. The average weekly earnings in the eight leading industries in Ontario stood at \$44.45 in 1949, compared with \$41.29 in the preceding year.

The annual index of employment for the Prairie Provinces reached a new all-time high in 1949, expansion was reported in each of the provinces, the greatest increase, 6.8 p.c. being recorded in Alberta where growth in the production of gas and oil acted as a stimulus to business generally. It is interesting to note that, except for a decline of only 0.9 p.c. in 1945 as compared with 1944, the annual index of employment for the Prairie Provinces taken as a unit has increased steadily since 1933. Gains in employment in 1949 were reported in all the major industries for which data are published for the Prairie Provinces. The average weekly earnings of persons in recorded employment in the Prairies increased from \$40.50 in 1948 to \$43.35 in 1949.

In 1949, industrial activity in British Columbia was slightly lower than in 1948. General improvement was reported by firms engaged in mining, communications, transportation, construction and trade, but slackening of demand and very extreme weather conditions in the winter months accounted for the drop of 20.6 p.c. in the annual index for employment in logging during the period under review. The average weekly earnings as reported by the larger employees in the eight leading industries in British Columbia increased from \$42.62 in 1948 to \$45.85 in 1949.

**Employment and Payrolls by Cities.**—Approximately 44.6 p.c. of the employees reported by the larger employers in the eight leading industries in Canada in 1949 were employed in the eight leading cities. The gain in employment in 1949 was slightly greater in these cities as a unit than in Canada as a whole. In the smaller cities and rural areas the index for the year declined by 1.3 p.c. An increase in employment was reported in all industries except transportation in the eight larger cities taken as a unit. With this exception, the city trend in the industries for which data are tabulated was similar to that in Canada but a greater increase was reported in manufacturing, communications and construction and slightly smaller increases in services and trade.

As can be seen from Table 6, improvement in employment in 1949 over 1948 was reported in all eight leading cities with the exception of Quebec and Vancouver. The decline of 1.0 p.c. in employment in Quebec City was largely the result of the falling-off in activity in shipbuilding and repairing. Curtailment in this industry was also partly responsible for the decline in the annual employment index in Vancouver; lower employment was also reported in lumber products, transportation and services.

The 1949 annual index of weekly payrolls for the eight leading cities as a unit was 10.4 p.c. above the 1948 figure. An advance of 7.5 p.c. was recorded in the general index number of payrolls for Canada in the same period. The increases in 1948 over 1947 had been 15.3 p.c. for the eight leading cities and 15.6 for the general index. The lower rate of increase in the year under review indicated a change in industrial distribution as well as some levelling-off in wage revisions.

The 1949 average weekly salaries and wages were higher than in 1948 for all the larger cities.

### 8.—Index Numbers of Employment as reported by leading Employers in certain Cities, by Months, 1948 and 1949, with Yearly Averages 1929, 1933 and 1939-49

NOTE.—These indexes are calculated as at the first day of each month on the base 1926=100. The relative weights show the proportion of employees reported in each city to the total reported by all employers making returns in Canada at Dec. 1, 1948. Averages for 1921-28, inclusive, are given at p. 772 of the 1938 Year Book and for 1930-38 at p. 615 of the 1947 edition.

Vancouver.....	38.5	37.5	37.3	95.3	107.0	116.4	36.69	40.13	43.42

Statistics of average weekly wages of hourly-rated wage-earners in leading manufacturing establishments are published monthly for several of the larger industrial centres. In the year under review, average weekly wages increased in all five of the larger cities for which data are published. The most substantial advance was in Hamilton where the average wages were \$4.26 per week higher than in 1948, longer working time and wage revisions in some of the major industries accounting for the advance. Increases in the other cities varied from \$1.17 in Montreal to \$3.20 in Vancouver.

**Employment and Payrolls by Industries.**—Employment was at a higher level in 1949 than in 1948 in all of the eight leading industries with the exception of logging. The slight increase in employment in manufacturing in the year under review took place mainly in the non-durable goods. Especially substantial gains in 1949 were made in fur products, paper products, printing and publishing, textiles and beverages. A decline in activity was reported in edible animal products, pulp and paper mills and rubber. Employment in this latter industry was affected by an industrial dispute in the closing months of the year. Employment in the durable goods industries consisting of iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments, clay and glass and stone products, were at a lower level of employment in 1949 as compared with 1948 in each of the groups in this category with the exception of the last four. Employment in the iron and steel industry declined by 1.0 p.c. in 1949 largely as a result of a falling-off in employment in agricultural implements and steel shipbuilding and repairing. The annual index for automobiles and parts increased by 7.1 p.c. With expansion to meet heavy demands for power, employment in electric light and power plants increased by 12 p.c.

The index number of weekly salaries and wages in manufacturing rose by 8.2 p.c. in 1949 to reach 208.2, the maximum on record. Increases in the indexes were reported in both the durable and non-durable divisions taken as a unit, the index for the durable goods industries increasing by 7.3 p.c., and that for the non-durable goods by 8.3 p.c. Wage revisions, increased cost-of-living bonuses, and the changing industrial distribution of workers contributed to the advance in earnings. The average weekly salaries and wages in manufacturing in 1949 were \$44.23, an increase of 8.1 p.c. over the 1948 figure of \$40.91. Average earnings in the durable goods division increased by 8.5 p.c. and in the non-durable goods by 7.8 p.c. In comparing the average earnings in the various industries, as shown in Table 11, differences in the sex, age and occupational distributions of the workers must be kept in mind.

The 1949 annual average of employment in logging was 26.7 p.c. below the preceding year, and 31.8 p.c. below 1947, the year of peak employment in logging. The cut of logs was down in some areas as a result of unfavourable weather and poor logging conditions. At the same time, there was a lighter demand for pulpwood with the decline of overseas markets and the United States recession during the earlier months of the year. The average weekly salaries and wages in the logging industry in 1949, at \$40.62, were 3.9 p.c. above the 1948 average earnings.

In 1949, expansion in employment was reported in the mining industry. There was a greater availability of workers. The increased activity was confined to coal and metallic ores, the index of employment for non-metallic minerals (excluding

coal) declined by 1.1 p.c. The industrial dispute in the Quebec asbestos mines early in the year was largely responsible for the lower index in non-metallic minerals in 1949; the index at Dec. 1, 1949, was, however, above that of Jan. 1, 1949. Much of the expansion in this period was the result of increased activity in the Alberta oil-fields. The per capita weekly earnings in the mining industry as a whole, at \$51.49 in 1949, were 5.6 p.c. higher than the average reported for 1948.

### 10.—Index Numbers of Employment, by Industrial Groups and by Months, 1948 and 1949, with Yearly Averages, 1929, 1933 and 1939-49

NOTE.—These indexes are calculated as at the first day of each month, on the base 1926=100. The relative weights show the proportion of employees reported in each industry to the total reported by all employers making returns in Canada at Dec. 1, 1948. Averages for 1921-28, inclusive, are given at p. 773 of the 1933 Year Book and for 1930-38 at p. 617 of the 1947 edition.

Percentage distri- bution of em- ployees reported in the leading industries as at Dec. 1, 1949.....	50.5	3.5	4.1	2.6	8.8	12.1	3.6	14.8	100.0

<sup>1</sup> Consists mainly of hotels and restaurants, laundries and dry-cleaning establishments.

Employment in communications continued to expand during 1949; the index for the year was 192·3, the 1948 index being 177. The heavy demand for telephone service and improvements accounted for most of the advance. The annual index of employment for telephone companies increased in the period under review. The average weekly earnings in the communication industry as a whole were \$40·40, as compared with \$37·66 for 1948. When comparing the per capita figures in communications with the averages for other industries, it must be kept in mind that the proportion of women in this industry is very high. Only a slight improvement in employment over 1948 was indicated in transportation, the gain in the street railway and cartage section being offset by declines in steam railway operation, shipping and stevedoring. The 1949 average indexes of payrolls for the industry as a whole were higher than the 1948 figures in all three main groups. The per capita weekly earnings in transportation increased by 6·1 p.c., to reach \$51·57, a new maximum.

The 1949 annual employment index in construction, at 175·1, exceeded the 1948 figure. With fewer supply difficulties, 1949 was a record year for the construction industry, particularly building construction, in which the employment index advanced from 1948. Included in building construction are the important hydro-electric construction projects in which employment expanded substantially throughout the year. Employment in highway and railway construction and maintenance declined by 3·3 p.c. and 0·8 p.c., respectively, in the year under review. The annual indexes of payrolls increased in all branches of the industry, the most substantial gains being made in building construction. The annual average of weekly earnings in the construction industry as a whole was \$41·34 for 1949, as compared with \$38·31 for 1948.

There was slight improvement in the service industries in the period under review; an increase in employment in laundering and dry-cleaning establishments was almost offset by declines in hotels and restaurants. The average weekly earnings in the service industry as a whole were \$28·05 in 1949, as compared with \$25·87 in 1948. The per capita earnings in the industry are affected by the employment of large numbers of female and part-time workers. The trend of employment in trade continued favourable throughout 1949; the index for the year was above the 1948 figure. The per capita weekly earnings in retail trade rose from \$32·03 in 1948 to \$34·58 in 1949, while in wholesale trade the average earnings were \$42·98, as compared with \$40·26 in 1948.

#### Subsection 4.—Earnings and Hours of Work of Male and Female Wage-Earners and Salaried Employees in Manufacturing\*

In 1946, the Employment Section of the Dominion Bureau of Statistics instituted annual surveys of hours and earnings of male and female wage-earners and salaried employees in manufacturing establishments, usually employing 15 or more persons, which superseded somewhat similar surveys conducted by the Census of Manufactures from 1932 to 1945.† The earlier surveys collected data from practically all manufacturers for one week in the month of highest employment in each establishment: the later series is limited to the larger plants, and covers one week in the autumn of each year. The comparability of the two series is also reduced by differences in the material collected and tabulated. More than 85 p.c. of the employees reported annually to the Census of Manufactures, by virtually all establishments in the industry, are included in the present series.

\*Prepared in the Employment Section, Labour and Prices Division, Dominion Bureau of Statistics.  
†Figures derived from these surveys appeared at pp. 567-574 of the 1948-49 Year Book.

The data published in Tables 11-14 relate to all wage-earners and salaried personnel in the employ of leading manufacturers in the weeks surveyed, except travelling salesmen, homeworkers, charwomen and workers engaged on new construction. Proprietors and firm members are also excluded, as are employees engaged in the distribution of products where the sales offices are organized as separate units. The reported hours include short-time, full-time and overtime hours actually worked, plus any hours of paid absence in the periods covered by the surveys. The wages and salaries represent gross earnings for the week, before income tax, unemployment insurance and other deductions are made; they comprise regular wages and salaries paid on a time or piece-work basis, regularly paid commissions, incentive or production bonuses, overtime earnings, etc. In 1948, the period of the survey was changed from the last week in November, as in 1946 and 1947, to the last week in October. Except for a few seasonal industries, this change did not materially affect the comparisons.

The tables show average hours and average earnings of wage-earners and salaried employees of both sexes for the weeks surveyed in 1946, 1947 and 1948, in Canada, in eight provinces, and in the principal manufacturing industries defined according to the new standard industrial classification coming into use by government departments. Earnings continued to rise in the eleven-month period ended Oct. 31, 1948, although, in general, not so sharply as between 1946 and 1947. The average working time showed little change. Variations in the general provincial averages are closely related to the industrial distributions of the workers. Factors influencing levels of earnings in different industries include: type and size of the manufacturing operation; proportions of women employed; occupational variations; seasonal influences; proportions of short-time, part-time and casual workers; amounts of overtime work done; extent of labour turnover and absenteeism in the week reviewed; and location of the plant in areas where pay levels tend to vary from the average. Differences in type and size of the industrial units also affect salary levels, as well as varying requirements for highly paid executive and professional personnel, the number and size of head offices, and the organization of distributive operations.

The percentages that women constituted of the reported wage-earners and salaried staffs in Canada and eight provinces, and the proportions that their earnings formed of men's earnings in November, 1947, and October, 1948, are shown in Table 13. Differences in pay-levels of men and women reflect not only variations in rates for each sex, but also other factors such as occupational differences, the higher proportion of women employed in industries in which pay levels are generally below average, the tendency for women, on the average, to be younger and less experienced workers, the shorter hours of women workers, and the higher incidence of part-time work and absenteeism.

Table 14 gives the percentage distribution of wage-earners of each sex in five main groups of hours for the last week in November, 1947 and for October, 1948. The proportions of employees working less than 45 hours tended to increase in 1948; in most areas the variations were not extensive. As in preceding years, a high percentage of the women worked less than 40 hours. The general provincial figures for manufacturing are influenced by the industrial distributions of workers, by variations in the standard working week, and by differences in amounts of short-time, part-time and overtime work, due to seasonal and other causes.

"Earnings and Hours in Manufacturing, 1948", published by the Dominion Bureau of Statistics, provides more complete information on these subjects for Canada, by provinces and the 22 large industrial cities. Statistics are given in the

publication for the three surveys, for additional industries and industrial divisions of manufacturing, compiled by the new standard industrial classification instead of by the classification formerly used.

### Subsection 5.—Unemployment as Reported by Trade Unions

Quarterly statistics on unemployment are compiled and published in the Labour Gazette by the Department of Labour. These are based, at the present time, on returns received from about 2,500 local trade union branches, having an aggregate membership of over 500,000 workers. 'Unemployment' means involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or idle because of illness, are not considered as unemployed, while union members retired and members of unions involved in industrial disputes are excluded from the tabulation. As the number of unions making returns varies from one date to another, with consequent variation in the membership upon which the percentages of unemployment are based, it should be understood that the figures for each date have reference only to the reporting organizations.

### 15.—Percentages of Unemployment in Trade Unions, by Provinces, half-yearly, 1939-49 and March, 1950

NOTE.—For percentages of unemployment as at June 30 and Dec. 31 from 1915 to 1930, see p. 827 of the 1934-35 edition of the Year Book; for percentages from 1931 to 1942 see p. 751 of the 1946 edition. For monthly data from 1921, see successive issues of the Year Book commencing with the 1922-23 edition.

### Section 4.—Unemployment Insurance

The Unemployment Insurance Act, which came into operation on July 1, 1941, applies to all employed persons with the following exceptions: workers in specified industries or occupations such as agriculture, fishing, Armed Forces, permanent public service of the Federal Government, Provincial Governments and municipal authorities, private domestic service, private-duty nursing, certain director-officers

of corporations, workers on rates other than hourly, daily or piece rates if earning more than \$4,800 per year and (except by consent of the Commission) employment in a hospital or charitable institution not carried on for gain. All employees paid by the hour, day or on piece rate (including a mileage rate) are insured regardless of amount of earnings, together with all employees who receive \$4,800 or less per annum under weekly, monthly or yearly rates.

**Unemployment Insurance Fund.**—Employers and employees contribute to the Fund, the total paid by each group being equal. The Federal Government contributes an amount normally equal to one-fifth of the combined employer-employee contributions and assumes the cost of administration. From July 1, 1941, to Apr. 30, 1950, employers and employees contributed \$653,798,947 to the Fund and the Federal Government added \$130,765,972. Interest and profit on sale of securities amounted to \$63,197,669 and fines of \$43,215 made a total revenue of \$847,805,803.

Benefits first became payable on Jan. 27, 1942, and from that date to Mar. 31, 1950, total benefit payments amounted to \$267,477,528, leaving a balance of \$580,328,272 in the Fund. Reserves of the Fund are invested in Government of Canada bonds and, as at Mar. 31, 1950, the par value of bonds held amounted to \$563,987,500.

WEEKLY RATES OF CONTRIBUTION AND BENEFIT UNDER THE UNEMPLOYMENT INSURANCE ACT

Earnings	Weekly Contributions <sup>1</sup>		Value of Weekly Stamp <sup>2</sup>	Weekly Benefits <sup>3</sup>	
	By Employee	By Employer		Single Person	Person With One or More Dependents
	cts.	cts.	cts.	\$	\$
Less than \$9.00.....	18	18	36	4.20	4.80
\$ 9.00 to \$14.99.....	24	24	48	6.00	7.50
\$15.00 to \$20.99.....	30	30	60	8.10	10.20
\$21.00 to \$26.99.....	36	36	72	10.20	12.90
\$27.00 to \$33.99.....	42	42	84	12.30	15.60
\$34.00 to \$47.99.....	48	48	96	14.40	18.30
\$48.00 or more.....	54	54	1.08	16.20 <sup>4</sup>	21.00 <sup>4</sup>

<sup>1</sup> The daily rate of contribution in respect of each class is one-sixth of the weekly rates. <sup>2</sup> Unemployment insurance stamps combine both employer and employee contributions. <sup>3</sup> Rates calculated on the average daily contribution for the last 180 days in the two years preceding claim. Daily benefit for an insured person without dependants is 34 times the average of his 180 most recent daily contributions, and 45 times the average daily contribution less ten cents per day in the case of a person mainly or wholly maintaining one or more dependants. The daily rate is one-sixth of the weekly rate. <sup>4</sup> Payable as from July 1, 1951.

No benefit is payable during the first eight days of unemployment in a benefit year. After that time, the duration of benefit is related to the employment and contribution history of the employee, the number of days' benefit being equal to one-fifth the number of contribution days during the previous five years, less one-third the number of benefit days in the previous three years. Insurance benefit is paid as a right on fulfilment of the following statutory condition:—

The payment of not less than 30 weekly (or 180 daily) contributions within two years, while in insured employment; and the payment of at least 60 daily contributions within the immediately preceding 12 months, or 45 daily contributions within the immediately preceding 6 months. (These periods of two years, 12 months and 6 months may be extended under certain circumstances.)

Disqualifications for benefit include: loss of work due to a labour dispute in which the contributor is participating or directly interested; unwillingness to accept suitable employment; being an inmate of any prison or an institution supported out of public funds; refusal to attend a course of instruction or training if directed to do so; residence outside Canada unless otherwise prescribed. Disqualification of a claimant for a period not exceeding six weeks may be made if an employee is discharged by reason of his own misconduct or leaves the employment voluntarily without just cause or refuses suitable employment.

Supplementary benefits at a slightly lower rate are payable to certain classes whose benefits have been exhausted or are not entitled to ordinary benefit during the period Jan. 1 to Mar. 31 in each year.

**Statistics of Unemployment Insurance.\***—Benefits under the Unemployment Insurance Act first became payable late in January, 1942, but no applications for benefit were received until early February. Except for unusual periods such as the months following the cessation of hostilities in Europe in the spring of 1945, monthly totals of claims received have shown a definite seasonal variation, rising in the late autumn and winter and falling again in the spring. Monthly averages of initial and renewal claims filed have been as follows: 1942, 2,244; 1943, 3,055; 1944, 7,575; 1945, 24,699; 1946, 40,722; 1947, 36,904; 1948, 54,091 and 1949, 77,821.

Since September, 1943, a record has also been maintained of the number of claims on the live unemployment register on the last working day in each month. This provides a measure of recorded unemployment among insured persons on one day of each month. Monthly averages of ordinary claims on the live register at the end of the month have been: 1944, 10,454; 1945, 41,139; 1946, 96,760; 1947, 68,254; 1948, 88,909 and 1949, 135,624.

Monthly statistics on the operation of the Unemployment Insurance Act also provide data on the number of days that claims on the live unemployment register at the end of each month have been continuously on the register, the number of claimants considered entitled and not entitled to benefit, chief reasons for non-entitlement, number of beneficiaries, number of days benefit paid and amount of benefit paid.

In addition to the monthly material on the operation of the Act, annual tabulations of the persons employed in insurable employment are prepared from returns covering the book exchange at Apr. 1, and annual data are published on benefit years established and benefit years terminated.

The number of persons insured under the Unemployment Insurance Act, shown in Table 16, was assumed to be those working in insurable employment as at Apr. 1, as indicated from returns on those receiving insurance books and contribution cards at that time.

Table 17 presents information on the persons for whom current benefit years were in existence during 1948. A benefit year is established under the Unemployment Insurance Act when an insured person, upon becoming unemployed, submits a claim and proves that at least 180 daily contributions have been made on his behalf during the preceding two years. Because of other provisions of the Act or because

\* Statistics of Unemployment Insurance are compiled and published by the Unemployment Insurance Section, Labour and Prices Division, Dominion Bureau of Statistics, from material supplied by the Unemployment Insurance Commission. A more detailed analysis of these data, by sex and province, is available in the publication "Annual Report on Current Benefit Years Under the Unemployment Insurance Act" issued by the Dominion Bureau of Statistics.

he may regain employment before he actually receives benefit, the setting up of a benefit year does not necessarily result in the receipt of benefit payments. When a benefit year is established it means, merely, that the claimant's right to receive benefit at a certain rate at any time during the succeeding twelve months is determined. Thus, although 595,556 persons held benefit years current in 1948, only 387,770 actually drew benefit in that year.

The benefit year remains in existence either until the authorized benefit rights are exhausted or until 12 months have passed since the date of its establishment, whichever occurs first. Some benefit years established in 1947 were carried over into 1948 so that, although 392,128 persons established benefit years in 1948 a total of 595,556 persons held benefit years currently available in 1948.

The amount of benefit paid, as presented in Table 17, is secured by multiplying each daily rate of benefit by the number of days paid at that rate on the cards representing benefit years upon which benefit was drawn in 1948.

Table 19 classifies those who drew benefit by the daily rate at which they were paid. The daily rate of benefit is determined by the amount of the daily average contribution paid on behalf of the claimant during the most recent 180 contribution days and by whether or not he has a dependant within the meaning of the Act.

#### 16.—Persons Insured under the Unemployment Insurance Act, by Industrial Groups and Sex, 1947 and 1948

NOTE.—These figures include only those who exchanged an unemployment insurance book or were issued a book for the first time in April. They, therefore, represent an estimate of the number employed in insurable employment as at Apr. 1.

<sup>1</sup> Subject to adjustment for errors and omissions in final payments. The total of this column is the summation of the benefit paid to each individual during the calendar year. This is the accepted annual figure to be used in conjunction with the data on persons establishing benefit years and benefit days paid, and is obtained from the daily rate authorized at the time the benefit year is established and the number of benefit days paid during the calendar year. This total is greater than the total of the 12 monthly figures published for the year 1948. The difference, 0.5 p.c., is due largely to the fact that the daily rate for some claimants changes during the life of the benefit year as the claimant gains or loses a dependant within the meaning of the Act.

**Employment Service.**—The Unemployment Insurance Commission operates a free employment service under authority of the Unemployment Insurance Act, 1940. The public employment offices, which had functioned under a joint Dominion-Provincial arrangement for more than two decades, were taken over on Aug. 1, 1941, and added to by the Commission in all provinces, except Quebec. The Commission also established offices in Quebec and the Provincial Government thereupon reduced the number of its own offices.

## Section 5.—Vocational Training\*

### Subsection 1.—The Vocational Training Program of the Department of Labour

The Federal Department of Labour, in co-operation with the Provincial Governments in 1949, carried on the following types of training: (1) youth training; (2) assistance to students; (3) apprenticeship; (4) unemployed workers; (5) assistance to the provinces for vocational schools; (6) training of military personnel; (7) training of discharged members of the Forces.

The Vocational Training Advisory Council, appointed under the authority of the Vocational Training Co-ordination Act, 1942, continued to advise the Minister of Labour on the general aspects of training plans. Two meetings were held during the year. The Council is representative of employers, organized labour, vocational education, veterans' and women's organizations.

#### 24.—Federal Government Allotments for Vocational Training for the Year Ended Mar. 31, 1950, and Claims Paid<sup>1</sup> to Apr. 30, 1950

<sup>1</sup> Claims paid include commitments from previous years.

**Youth Training.**—Each province submitted to the Department of Labour a list of the various courses proposed for Youth Training. These, on approval by the Minister of Labour, were incorporated into appropriate schedules which set forth the regulations governing the operation of the different courses. As in previous years, the training consisted for the most part of various general and specialized courses for rural young people in agriculture, home craft and handicrafts, and other related subjects.

\* Full information on this subject is given in the "Canadian Vocational Training Annual Report, 1949-50", Department of Labour, Ottawa.

**Assistance to Students.**—Under the Youth Training Division of the Vocational Training Agreement with each province, assistance was provided for nurses-in-training at hospitals and university students in courses leading to a degree, who had good academic standing but who, without financial assistance, could not continue training. At the discretion of the provincial authorities, assistance could be given in the form of a grant or loan, or a combination of the two.

The value of Federal Government assistance to students at universities and nurses-in-training may be assessed from the following approximate amounts which have been paid to the provinces for that purpose during 1948-49.

<u>Province</u>	<u>Amount</u>	<u>Province</u>	<u>Amount</u>
	\$		\$
Prince Edward Island.....	5,000	Manitoba.....	3,650
Nova Scotia.....	9,300	Saskatchewan.....	19,500
New Brunswick.....	10,800	Alberta.....	11,300
Quebec.....	75,500	British Columbia.....	24,800
Ontario.....	60,000		

Total federal payments in the last eleven years have been over \$1,850,000, to over 20,700 students.

During the fiscal year 1949-50, Federal Government expenditures for assistance to students and nurses amounted to \$130,000 in the form of grants, and \$89,850 in the form of loans. Financial help was given to 591 nurses-in-training and 2,150 students at universities. Included in the total number of university students were 425 taking courses in medicine, 85 in dentistry, 395 in engineering, 64 in agriculture, and 746 in arts and science.

**Apprentice Training.**—Apprenticeship Agreements continued in effect with all provinces except Newfoundland, Prince Edward Island and Quebec. Very few changes were made in the trades designated under Provincial Acts. The main emphasis was given to building and construction trades. With the completion of the veteran's training program, the number of discharged members of the Forces as apprentices has decreased very substantially and has not been fully compensated for by the number of young civilians entering designated apprentice trades. The result was that the total number of apprentices registered in the seven provinces decreased from 10,976 on Mar. 31, 1949, to 10,427 on Mar. 31, 1950.

Increasing importance has been placed on the class training of the apprentices. In some provinces, certain categories of apprentices are taken in for full-time training of a practical, as well as technical, nature for a period of one to three months each year. For other categories, part-time training is given either in afternoon or evening classes for about seven months in the year.

In 1950 an experiment was commenced in basic or pre-employment training, following the experience gained in the rehabilitation program for veterans. This training was given prior to the young men taking up work with an employer and usually lasted for six months, commencing about October. Training of this kind has been commenced in Nova Scotia, New Brunswick, Manitoba, Alberta, and will be commenced shortly in Saskatchewan. Following the completion of the course, each apprentice is trade tested and given time credit according to the skill attained.

Provision was made for more adequate supervision of apprentices, while working 'on-the-job' with employers, by the appointment of instructor-supervisors whose time was spent for approximately six to eight months instructing in full-time classes, and in supervision for the remaining part of the year. The results have been satisfactory.

Increasing use is being made also of trade advisory committees. Costs approved under the Agreement are shared equally between the province and the Federal Government.

**Training of Unemployed Persons.**—An amendment to the Canadian Vocational Training Co-ordination Act in 1948 expanded the provisions for the training of unemployed persons so that those who were not in receipt of unemployment insurance benefit would be eligible. Greater authority and responsibility were given to the provinces in the selection of trainees, the decision in regard to starting classes, and the operation of such classes. The approved costs were shared equally between the provinces and the Federal Government, with each province recommending to the Minister of Labour the scale of training allowances that should be paid.

The schedule covering the training of unemployed persons was accepted by all provinces. Training was not carried out in Prince Edward Island, Quebec or Ontario, where it was considered that the necessity for it had not developed.

In the fiscal year 1949-50, approximately 114,000 days' training was given to 1,733 individuals, nearly all of whom were in Nova Scotia, New Brunswick, Manitoba, Saskatchewan and Alberta. On Mar. 31, 1950, 627 were under training. The largest enrolment was in classes for nurses' aides. No training under this schedule was given for the designated apprentice trades.

**Training of Military Personnel.**—Authority was obtained to amend the Vocational Training Agreement by adding Schedule "K" to provide for the training of service tradesmen in such categories as might be requested by the Department of National Defence, and for whom the Provincial Governments had the necessary training facilities.

The training was on a comparatively small scale, with an enrolment of 656 trainees in the Provinces of New Brunswick, Quebec, Ontario, Manitoba and Saskatchewan. The greater part of the training was given to driver mechanics or motor-vehicle mechanics. The cost of this type of training was paid solely by the Federal Government.

**Discharged Members of the Forces.**—There was a further marked decrease in the numbers of veterans given training. The new enrolments were composed of pensioners or individuals who, for various reasons, had to delay their entrance to training. Only 694 veterans received training during the year, of whom 270 were still under training on Mar. 31, 1950. No veterans were enrolled in either Prince Edward Island or Saskatchewan at the end of the year. Since the outset of Rehabilitation Training, the total enrolment is 134,722. The costs were borne solely by the Federal Department of Labour, and expenditures have amounted to over \$25,800,000.

**Assistance to the Provinces for Vocational Schools.**—The ten-year agreement for vocational school assistance signed in 1945 continued in operation in nine provinces, and a new agreement was made in the latter part of this fiscal year with Newfoundland. The following payments are made by the Federal Government:—

- (1) An annual grant of \$10,000 to each province;
- (2) an annual allotment of \$1,965,800, allotted among all ten provinces in accordance with the number of young persons in each province in the age group fifteen to nineteen years;
- (3) a special allotment of \$10,292,250, to be used for capital expenditures for buildings and equipment, and distributed among the provinces on the same basis as the annual allotment.

All federal allotments, except the annual grant under item (1), must be matched by an expenditure of equal amount by the Provincial Government.

The assistance given by this agreement has resulted in a great expansion of vocational training facilities across the country. Federal approval has been given to 103 vocational building projects, consisting of new schools or vocational additions to existing schools. Of these, 66 had been finished on Mar. 31, 1950, and 14 were still under construction. A notable contribution has been the provision for young people in rural areas of facilities for training in homemaking and related subjects, vocational agriculture and farm mechanics. Table 25 gives the amount of the federal annual and capital allotment to each province, together with the amount of claims paid during the fiscal year 1949-50. Since the beginning of the agreement, the total federal payments under the annual allotment in the five-year period had amounted to approximately \$8,400,000, and total capital payments for buildings and equipment to approximately \$6,077,500.

**Subsection 2.—Vocational Training of Veterans**

The vocational training of veterans which was authorized under the provisions of the Veterans Rehabilitation Act and under which more than 90,000 veterans were approved for training to assist in their rehabilitation in civil life, has, apart from some types of long-term training, come to a close.

For further details of Vocational Training of Veterans see pp. 704-5 of the 1950 edition of the Year Book.

## Section 6.—Industrial Accidents and Workmen's Compensation

### Subsection 1.—Fatal Industrial Accidents

Statistics of fatal industrial accidents have been compiled by the Federal Department of Labour since 1903. The data are now obtained from provincial Workmen's Compensation Boards, the Board of Transport Commissioners and other government authorities, from departmental correspondents and press reports.

#### 26.—Fatal Industrial Accidents, by Industries, 1946-49

**Causes of Fatal Accidents.**—Preliminary figures indicate that during 1949, 422 fatal accidents to gainfully employed persons were caused by moving trains, vehicles, etc. Falls of persons resulted in 204 fatalities and by falling objects 159. Other fatal accidents included 148 caused by dangerous substances, 57 by striking against or being struck by objects, 26 by working machines, 23 by hoisting apparatus, 19 by handling objects, 16 by prime movers, 16 by animals, and 3 by tools. Included in the category "other causes" were 251 fatalities of which 132 were due to industrial disease, strain, etc. The number of accidents, fatal and non-fatal, dealt with by the provincial Workmen's Compensation Boards are shown in Subsection 2.

### Subsection 2.—Workmen's Compensation\*

In all provinces legislation is in force providing for compensation for injury to a workman by accident arising out of and in the course of employment, or by a specified industrial disease, except where the workman is disabled for less than a stated number of days. The Acts of all provinces provide for a compulsory system of collective liability but the Newfoundland Act passed in 1950 has not yet been proclaimed in effect. To ensure payment of compensation, each provincial Act provides for an accident fund, administered by the province, to which employers are required to contribute at a rate determined by the Workmen's Compensation Board in accordance with the hazards of the industry. A workman to whom these provisions apply has no right of action against his employer for injury from an accident during employment. In Ontario and Quebec, public authorities, railway and shipping companies, and telephone and telegraph companies are individually liable for compensation as determined by the Board, and pay a proportion of the expenses of administration.

\* More detailed information is given in "Workmen's Compensation in Canada, A Comparison of Provincial Laws", issued by the Department of Labour.

A federal Act provides for compensation for accidents to Federal Government employees according to the conditions laid down by the Act of the province in which the accident occurs. Seamen who are not under a provincial Workmen's Compensation Act are entitled to compensation under the Merchant Seamen Compensation Act, 1946.

Free medical aid is given to workmen during disability in all provinces.

Compensation is payable in all provinces for anthrax and for poisoning from arsenic, lead, mercury and phosphorus, and silicosis is compensated under certain conditions. Other diseases compensated vary according to the industries of the provinces.

**Scope of the Workmen's Compensation Acts.**—The Acts vary in scope but in general, they cover construction, mining, manufacturing, lumbering, fishing, transport and communications and the operation of public utilities. Undertakings in which not more than a stated number of workmen are usually employed may be excluded, except in Alberta.

**Benefits.**—Under each Act, a fixed period must elapse between the date of the accident and the date when compensation begins but, in all cases, medical aid is given from the date of the accident. This waiting period varies from one to seven days and in all provinces compensation is paid for the waiting period, if disability continues beyond it except that in Saskatchewan where the waiting period is only one day, compensation is payable from and including the day after the accident.

Benefits under the Newfoundland Act are to be prescribed by regulations. In the other provinces, at present, compensation in fatal cases is paid as follows:—

Burial expenses, \$150 in Nova Scotia, New Brunswick, Manitoba and British Columbia, \$175 in Quebec, Saskatchewan and Alberta, \$125 in Ontario, and \$100 in Prince Edward Island. In certain cases costs of transporting the body are also allowed.

To a widow or invalid widower, or to a foster mother, as long as the children are under the age limit, a monthly payment of \$50 in Nova Scotia, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia, of \$45 in Quebec, and of \$40 in Prince Edward Island and New Brunswick; in addition a lump sum of \$100 is paid in all provinces.

For each child in the care of a parent or foster mother receiving compensation, a monthly payment of \$10 is made in Prince Edward Island, New Brunswick and Quebec; of \$12 in Ontario and Manitoba; of \$12·50 in Nova Scotia and British Columbia and of \$15 in Saskatchewan and Alberta. In Alberta an additional payment of \$10 a month is made, and in British Columbia the monthly payment of \$12·50 is continued to children between 16 and 18 years of age who are attending school.

To each orphan child, \$25 a month is paid in Saskatchewan, \$22·50 in Nova Scotia, and \$20 in Prince Edward Island, New Brunswick, Ontario, Manitoba and British Columbia and \$15 in the other provinces (in Alberta, an additional payment, not exceeding \$10 a month, may be given), with, in Nova Scotia, a maximum of \$90 per month to one family.

Except in the case of invalids, payments to children are not continued beyond the age of 16 years in Prince Edward Island, Nova Scotia, Ontario, Manitoba and Saskatchewan, 18 in Quebec, Alberta and British Columbia, and in New Brunswick 18, or the age when they leave school. In Prince Edward Island, Nova Scotia, Ontario, Manitoba and Saskatchewan payments for children may be made up to the

age of 18 if it is desirable to continue their education. In Ontario, Manitoba and British Columbia payments to invalid children are continued until recovery, while the other provinces make payments only for the length of time the Boards consider that the workman would have contributed to their support.

Where the only dependants are persons other than consort or children, all the Acts provide that compensation is to be a reasonable sum proportionate to the pecuniary loss but the total monthly sum to be paid to all such dependants is limited to \$100 in Ontario, \$60 in Manitoba, \$85 in Alberta, \$45 in Prince Edward Island and Nova Scotia and \$55 in British Columbia. In British Columbia, however, if there are also dependants such as a widow, an invalid widower or children, the maximum payable to other dependants is \$40 per month. In all provinces, compensation to dependants other than consort or children is continued only for such time as the Board considers that the workman would have contributed to their support.

Except in Ontario, Saskatchewan, Alberta and British Columbia, maximum benefits payable to dependants in case of death of the workman are two-thirds of the earnings. In Ontario and Saskatchewan the average earnings are the maximum amount payable.

The minimum payable to a consort and one child in Quebec is \$55 per month, \$65 if there is more than one child; in Manitoba the minimum is \$12.50 per week, or if there is more than one child, \$15 per week. In Saskatchewan a widow with one child must be paid at least \$65 a month and if there are more children, \$75.

The rate for total disablement in all provinces except Ontario and Saskatchewan is a weekly payment for its duration equal to  $66\frac{2}{3}$  p.c. of the average weekly earnings; in Ontario and Saskatchewan it is 75 p.c. Except in New Brunswick, the Acts fix minimum sums that must be paid. The weekly minima are \$12.50 in Prince Edward Island and British Columbia; \$15 in Quebec, Manitoba and Alberta and \$20 in Saskatchewan. In Nova Scotia the minimum is \$75 per month and in Ontario \$100 per month. If, however, average earnings fall below such minima, a sum equal to earnings is paid in all provinces except Nova Scotia and Saskatchewan. For partial disablement, similar provision is made in all provinces except New Brunswick, Ontario, Saskatchewan and Alberta, i.e., two-thirds of the difference in earnings before and after the accident. In Ontario and Saskatchewan it is 75 p.c. of the difference. In New Brunswick and Alberta, the amount is determined by the Board according to the impairment of earning capacity, but in New Brunswick two-thirds of the diminution of earnings is payable for temporary partial disablement. In all provinces except British Columbia, if the difference is 10 p.c. or less, and in New Brunswick in any case where the Board considers it would be to the advantage of the workman, a lump sum may be given.

The average earnings on which compensation is based must not exceed \$3,000 in Ontario and Saskatchewan, and \$2,500 in all the other provinces. If the workman's earnings at the time of the accident are not considered a proper basis for compensation, the Board may use as a basis the average earnings of another person in the same grade of work. Compensation paid workmen under 21 years of age may be raised later, if it appears likely that their earning power would have increased had the injury not occurred.

The statistics of workmen's compensation published by the provincial boards are not on a comparable basis and are, therefore, presented in a series of tables.

**Section 7.—Wages and Hours of Labour****Subsection 1.—The Regulation of Wages and Hours of Labour**

The regulation of wages and hours of persons in private employment in Canada is within provincial jurisdiction, and all the provinces, except Prince Edward Island, have legislation on the subject.

In Nova Scotia the minimum wage law applies only to women, while in Ontario, though the Act applies to both sexes, the Orders apply only to women. In Manitoba, New Brunswick and Alberta there are separate Orders for men and women and also in British Columbia but in the latter Province certain Orders cover both sexes. In Quebec and Saskatchewan, Orders apply to both sexes. The Newfoundland Minimum Wage Act, 1950, applies to both male and female workers and is similar to the Acts in the other provinces.

In Quebec, under the Collective Agreement Act, hours and wages, and also apprenticeship, vacations with pay and family allowances provisions established by a collective agreement voluntarily entered into by employers and trade unions or groups of employees may be made legally binding by Order in Council on all

employers and employees in the industry in the district covered by the agreement, if the parties are sufficiently representative of the industry. At Mar. 31, 1948, 121 agreements had been generalized to apply either throughout the Province or to a certain district. These agreements covered 204,428 work people and 18,362 employers. The agreements in force throughout the Province apply to the following industries: building materials; the manufacture of women's cloaks and suits, dresses, millinery, men's and boys' clothing, men's and boys' hats and caps, fine gloves and work gloves, shoes, furniture, paints, corrugated and uncorrugated paper boxes; the tanning industry and the lithographing industry and elevator construction. Other agreements concern industries in particular cities or parts of the Province including all building trades and printing trades in the large urban centres and many rural districts. In 1949, three new agreements were extended for the first time and four affecting bakery employees, checkers (ocean navigation), lithographers, and shoemakers were repealed.

The Industrial Standards Acts of Nova Scotia, New Brunswick, Ontario and Saskatchewan and the Alberta Labour Act provide that wages and hours agreed upon at a conference of representatives of employers and employees, called by the Minister of Labour or his representative, may be made legally binding by Order in Council on the industry in the area concerned. The Nova Scotia Act applies only to construction work at Halifax, Dartmouth and Sydney.

In Nova Scotia, 10 schedules for individual building trades were in force during 1949. These included six which were renewals of previous schedules and two others which were made for the first time in one zone, and two others which were previously in effect during 1948 in another zone. In New Brunswick, one schedule made in 1949 for one building trade in one zone was a renewal of the previous schedule; one other schedule for another building trade in the same zone terminated

In Ontario, there were 132 schedules in force at the end of 1949. Throughout the Province, schedules were in effect for brewery workers, cloakmakers, the men's and boys' clothing industry and the hard furniture industry. In the construction industry, one schedule covered several building trades in one city, and 55 schedules, each for a single trade in a single locality, covered one or more trades in 28 localities. In other industries also, schedules were in effect only for certain zones: for bakers in one zone, for soft furniture manufacturing in one, for coal hoisting in one, for the coal industry in one, for taxi-drivers in one, for the retail gasoline service industry in four and for barbers in 63 zones. Of the above, 13 were new schedules and two were schedules made for the first time in 1949.

In Saskatchewan, 16 schedules were in effect at the end of 1949. These included one for barbers covering the whole Province; others covered bakers and salesmen, carpenters, electrical workers, painters, shoe repairers, and beauty culture operators, in one or more areas. During 1949 three new schedules, including one schedule made for the first time, were made binding and three were rescinded.

In Alberta, 21 schedules were in effect at the end of 1949. These included in one or more areas, bakers and bakery salesmen, certain individual building trades, dairy employees, garage and service station employees, radio service employees, laundry and dry-cleaning employees and barbers. During the year, four new schedules, including one schedule made for the first time, were made binding and two were revoked.

Part II of the Manitoba Fair Wage Act provides similar machinery for fixing wages and hours in any business, trade or undertaking, except agriculture. Under this legislation, Orders in Council have been passed fixing wages and hours for the baking industry and for the barbering and hairdressing trades.

Legislation in all provinces, except Prince Edward Island, which applies to mines, factories and, in some cases, to shops, restricts the hours of work of women and young persons or, in some provinces, of all workers. In Nova Scotia, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia, there are also statutes dealing only with hours of work. The Nova Scotia Act is not in force. Several Minimum Wage Acts give authority for the regulation of hours as well as wages.

**Minimum Wage Regulations.**—Table 35 shows the minimum rates in effect in June, 1950, for several classes of establishments in the principal cities. In New Brunswick, Alberta and British Columbia the rates for all workers and in Manitoba the rates for men, apply throughout the Province. In other provinces, and with respect to women in Manitoba, lower rates are in effect outside each of the indicated urban areas of the Province. The rates given apply to the hours specified or, except at Montreal and Winnipeg, to the normal work-week of the establishment, if less.

**35.—Minimum Weekly Rates for Experienced Workers in principal Cities, June, 1950**

Item and Type of Establishment	Halifax <sup>1</sup>	Saint John <sup>1</sup>	Montreal	Toronto <sup>1</sup>	Winnipeg <sup>2</sup>	Regina <sup>3</sup>	Edmonton <sup>4</sup>	Vancouver <sup>5</sup>
Hours per week . . .	44-48	48	48-60 <sup>6</sup>	48	44	44	48	44
	\$	\$	cts. per hour	\$	\$	\$	\$	\$
Factories.....	15	14.40	35	16.80	19.50	21	20	0.40 <sup>7</sup>
Laundries, etc....	15	14.40	35	16.80	19.50	21	20	0.40 <sup>7</sup>
Shops.....	15	14.40	35	16.80	19.50	21	20	18
Hotels, restaurants, etc.....	15	0.28 <sup>7</sup>	30 <sup>8</sup>	16.80	19.50	21	20	18
Beauty parlours...	15	14.40	35	16.80	19.50	21	20	20
Theatres and amusement places	15	14.40	35	16.80	19.50	0.55 <sup>7</sup>	0.50 <sup>7</sup>	18
Offices.....	15	14.40	35	16.80	19.50	21	20	18 <sup>1</sup>

<sup>1</sup> Females only. For Saint John a revision of rates, effective Sept. 1, 1950, establishes an hourly rate of 35 cents in all classes except hotels, restaurants, etc.

<sup>2</sup> Females; 50 cents for men applying to 48-hour week.

<sup>3</sup> Rates apply to 36 hours or more.

<sup>4</sup> Females; \$25 for men over 21 years.

<sup>5</sup> In hotels, beauty parlours, theatres and amusement places, rates apply to 40 hours or more; in shops to 39 hours or more; and in offices to 36 hours or more.

<sup>6</sup> Rates apply to 48 hours in factories and offices, except in specified cases; 54 hours in laundries, shops, beauty parlours and theatres; 60 hours in hotels.

<sup>7</sup> Hourly rates.

<sup>8</sup> Head waiters and kitchen help, 35 cents; cooks, 40 cents.

**Regulation of Hours and Annual Holidays.**—In Ontario and Alberta there is a maximum eight-hour day and 48-hour week for the workers to whom the statutes apply. In British Columbia hours are limited to eight in a day and 44 in a week. In Saskatchewan an Act of 1947 requires time and one-half to be paid for work after eight hours daily and 44 hours weekly. This Act covers all workers employed in, or within a five-mile radius of any city, workers in all factories in the Province, and in shops and offices in the towns or villages within the scope of Minimum Wage Orders. In the other three above-mentioned provinces the Acts apply to most workers, except farm labourers and domestic servants.

A Manitoba Act of 1949 requires time and one-half to be paid for work done after eight hours in a day and after 48 hours in a week for men workers and 44 for women. The Act covers most industrial workers in the Province.

In all provinces that have Acts regulating hours, longer hours may be worked in an emergency or by permission of the administrative authority.

In Nova Scotia and Alberta time and one-half is payable for all work in excess of 48 hours or of the regular work-week if less, but in Nova Scotia the provision applies only to women and only where the legal minimum rate is being paid. In British Columbia time and one-half must be paid after 44 hours. In most classes of industrial establishments in Quebec, time and one-half is payable after 48 hours. In hotels and restaurants and other workplaces in the larger towns and villages of Saskatchewan time and one-half is payable after 48 hours.

Six provinces have provided for annual holidays with pay for workpeople in most industries. In five of these provinces—Quebec, Ontario, Manitoba, Alberta and British Columbia—workers are entitled to a week's holiday with pay after a year of employment. Two weeks' holiday is given in Saskatchewan after a year of employment and, in Alberta, after two years of employment. A worker employed for less than a year is entitled, in Quebec, to a half-day for each month of employment and in Saskatchewan to one day for each month.

Coal miners in Alberta are entitled to a one day holiday with pay for every 20 days worked in a month but not more than two weeks holiday in a year.

Excluded from the holiday provisions are farm workers in all provinces, and domestic servants in all but Manitoba and Saskatchewan. The Manitoba Act also excludes independent contractors and railway and express companies under federal jurisdiction. In addition, Quebec exempts forest operations, public corporations, janitors and watchmen and certain part-time workers; Ontario, professional workers, funeral directing and embalming; Manitoba and Saskatchewan, ranching and market gardening; and British Columbia professional workers and horticulture.

### Subsection 2.—Statistics of Wage Rates and Hours for Various Classes of Labour\*

Statistics of rates of wages and hours of labour have been collected for many years by the Federal Department of Labour and are published in the *Labour Gazette* and, later, in annual reports supplementary to the *Labour Gazette*. The first report was issued in 1921 but the records begin, in many cases, with the year 1901. The index numbers show the general movement of wage rates for the main industrial groups as well as for individual industries, but these cannot be used to compare wage rates in one industry with those in another. The statistics are average straight-time wage rates or average straight-time piece-work earnings and therefore do not include overtime or other premium payments.

Tables 36 and 37 show the index numbers of wage rates by main industrial groups and by industries. From 1930 to 1933 there was a general decrease in wage rates but increases have been general each year since that time. During the period 1939-49, the rise in the index number of wage rates amounted to 105.1 p.c.

\* For more detailed information see "Wage Rates and Hours of Labour in Canada", published by the Department of Labour as a supplement to the *Labour Gazette*.

**36.—Index Numbers of Wage Rates for certain Main Groups of Industries, 1939-49**

(1939=100)

NOTE.—Figures back to 1901 may be obtained from the report "Wage Rates and Hours of Labour in Canada, 1948", published by the Department of Labour as a supplement to the *Labour Gazette*. Figures for 1921-38 are given at p. 650 of the 1947 Year Book.

**Wages of Farm Labour.**—Changes in farm wage rates were varied in 1949. During the forepart of the year they continued the general upward climb which has been in evidence since 1940. In August, however, some levelling-off and decline occurred in Eastern Canada and British Columbia. Average wage rates are shown on the basis of rates paid with board provided by the employer and without board. The information is provided by a corps of volunteer farm correspondents located throughout Canada.

## 42.—Average Wages of Male Farm Help per day and per month, as at Jan. 15, May 15 and Aug. 15, 1947-49

NOTE.—Figures for 1940-42 are given at pp. 732-733 of the 1943-44 Year Book and for 1943-46 at pp. 653-654 of the 1947 edition.

### Section 8.—Workers Affected by Collective Agreement

Statistics on the number of workers affected by collective agreements in Canada are compiled by the Department of Labour. Table 43 gives figures for the principal industrial groups. It shows in the second column the number of workers affected by agreements extended under the Quebec Collective Agreement Act (see Sub-section 1, p. 696). Any duplication of the numbers of workers covered by agreements under this Act and by other agreements is eliminated in the third column. Of the total number of workers affected by agreements, 92 p.c. are represented by international or national unions. A more detailed table in the *Labour Gazette*, December, 1949, as well as studies of agreements in certain industries are available from the Department of Labour.

## Section 9.—Organized Labour in Canada

Information concerning trade unions is published in the Annual Report on Labour Organization in Canada, issued by the Department of Labour, Ottawa.

At the end of 1949 there were 1,005,639 trade union members in Canada. This represents an increase of 3 p.c. over the figure for the previous year, resulting chiefly from advances by some of the international unions and the inclusion of the Province of Newfoundland in the survey for the first time. The majority of the unions in Canada are affiliated with a central labour congress, the membership of which are listed in Table 46. In addition the three largest congresses are discussed individually below.

*Trades and Labour Congress of Canada.*—The Trades and Labour Congress of Canada is the oldest of the central labour organizations in Canada. After the disbanding of the Canadian Labour Union, which had drawn together local unions in Ontario from 1873 to 1877, inclusive, there was no central organization until 1883 when the Trades and Labour Council of Toronto called a conference of local unions and plans were made to establish a national organization which was formally set up in 1886.

Affiliated with the Trades and Labour Congress at the present time are 'international' trade unions, almost all of which are also affiliated with the American Federation of Labour, a number of Canadian or 'national' unions and a number of directly chartered labour unions.

*Canadian Congress of Labour.*—This Congress was organized in September, 1940, when the All-Canadian Congress of Labour, formed in 1927, amended its constitution to permit the affiliation with the Congress of the Canadian branches of those international unions which, in the United States, are affiliated with the Congress of Industrial Organization. The Canadian Congress has also among its members a number of unions to which it has granted charters.

*Canadian and Catholic Confederation of Labour.*—National Catholic Unions in Canada date from 1901. In 1921 these local Catholic Syndicates, which are grouped in federations according to industry as far as possible, formed a central organization, the Canadian and Catholic Confederation of Labour.

### Section 10.—Strikes and Lockouts

Statistics of strikes and lockouts in Canada have been collected by the Federal Department of Labour since its establishment in 1900.

A complete review of strikes and lockouts during 1948 and 1949, with analyses of statistics under various headings, will be found in supplements to the *Labour Gazette* for April, 1949, and April, 1950.

**Strikes and Lockouts in Recent Years.**—There were no significant changes in the 1949 record of industrial disputes which resulted in work stoppages as compared with the previous year. The number of strikes and lockouts declined, being the lowest recorded for any year since 1939. The number of workers involved showed an increase of 8,617 over 1948, and the time loss was greater by 177,874 days. Strike statistics of the last two years indicate an improvement in industrial relations as compared with the preceding two-year period, the time loss for 1948 and 1949 being less than one-third of that in 1946 and 1947. The small number of work stoppages in existence during 1949, 137 strikes and lockouts, involving 51,437 workers, reflects the progress made in collective bargaining without resort to strike action. The latest figures available show that in 1948 collective agreements in effect covered more than 1,200,000 workers. The great majority of these contracts have been renewed by peaceful negotiations.

For the past four years the demand for increased wages has been the predominant cause of strikes and lockouts as workers sought to maintain their purchasing power and offset rising prices with increased wage rates. In 1949, this demand for higher

wages, frequently accompanied by other issues affecting unionism and working conditions, was the main cause of 63 p.c. of the work stoppages, affected 56 p.c. of the workers, and caused 84 p.c. of the total time loss. In 1948, 83 p.c. of the idleness resulted from disputes over wage increases, 91 p.c. in 1947, and 96 p.c. in 1946. Pension and welfare plans were not an important cause of strikes and lockouts in 1949. Accident and hospitalization, pension and welfare funds were listed as issues in some six work stoppages but they appeared to be less important in all cases than the question of increased wages, which was the major demand.

The greatest amount of time lost in 1949 was in the mining industry, caused by a strike of asbestos miners and mill workers in various centres in Quebec. This strike alone accounted for almost one-half the total time lost during the year. Strikes in the coal mining industry were few and caused little time loss. In 1947, the largest amount of time loss was also in the mining industry, because of a prolonged strike of coal miners in Nova Scotia and New Brunswick. With the exception of 1949 and 1947, during the last eight years the time loss in manufacturing, with the largest working force of any industry, has been greater than in all other industries combined.

Settlement of 62 of the 137 strikes and lockouts in 1949 was brought about by direct negotiations, in some cases with provincial conciliators acting in an advisory capacity at some stage of the negotiations. Twenty-nine stoppages were settled following reference to provincial conciliation, labour boards, commissioners, arbitration, etc., and 27 by return of workers and replacement, the latter being a factor in five cases.

#### 47.—Strikes and Lockouts, 1940-49

Year	Number Beginning During the Year	Strikes and Lockouts in Existence During Year

## Section 11.—Canada and the International Labour Organization

The Department of Labour is the officially designated liaison agency between the Canadian Government and the International Labour Organization. The I.L.O. was established in 1919 in association with the League of Nations under the Treaties of Peace with the object of improving labour and social conditions throughout the world by international agreement and legislative action. Under an agreement approved by the General Conference of the International Labour Organization at its 29th Session at Montreal, Que., on Oct. 2, 1946, and by the United Nations General Assembly on Dec. 14, 1946, the Organization became a specialized agency of the United Nations, although retaining its autonomy.

An association of 62 nations, financed by their governments and controlled by representatives of those governments and of their organized employers and workers, the Organization comprises: (1) the General Conference of representatives of the Member States; (2) the International Labour Office; and (3) the Governing Body. The Organization's structure and field of activity has been considerably extended since 1945 by the establishment of eight tripartite committees to deal with problems of major world industries.

The Conference in normal times meets at least once a year, and is composed of four delegates from each Member State, two representing the government, one representing the employers, and one the workers. Decisions of the Conference are in the form of Conventions or Recommendations. The former, when given legislative effect and ratified by Member States, are legally binding on them. The enforcement of Conventions within such countries is a matter for annual consideration by the Conference. The I.L.O. Constitution requires, however, that every Convention must be brought before the competent authority or authorities for legislative or other action. In Canada, the competent authorities in respect to the subject matter of most of the Conventions and Recommendations are the Provincial Legislatures. Amendments to the Constitution adopted by the Conference in 1946 included new provisions concerning the obligations imposed on federal countries with respect to the manner of dealing with Conventions and Recommendations. These changes in procedure are expected to facilitate the adoption of Conventions and Recommendations by the constituent States or provinces of federal countries.

The International Labour Office acts as the permanent secretariat of the Organization and as an information centre and publishing house with respect to all questions on industry and labour.

The Governing Body consists of 32 persons, 16 government representatives, eight employers' and eight workers' representatives, of whom all but the representatives of the eight States of chief industrial importance, while holding permanent seats, are elected triennially by the Conference. The Governing Body, which usually meets quarterly, has general supervision of the International Labour Office, frames its budget and fixes the agenda of the Conference when the Conference itself does not do so.

There have been 33 sessions of the Conference at which 98 Conventions and 83 Recommendations have been adopted covering a wide range of subjects: freedom of association; hours of work; weekly rest; holidays; minimum wage for employment;

night-work of women and young persons; health and safety; workmen's compensation; seamen's conditions; insurance against unemployment, sickness, old age and death colonial labour problems; protection of migrant workers; and many other aspects of the protection of workers' rights and interests. There have been 1,146 ratifications of these Conventions.

During 1950 Canada registered its ratification of an International Labour Organization Convention dealing with employment service organization.

Thirteen International Labour Conventions have been given legislative effect by the Federal Parliament and have been ratified by the Government, seven of which are Maritime Conventions. During 1949 the International Labour Conference held its 32nd Session at Geneva; five of the Industrial Committees held sessions (Coal Mining; Inland Transport; Iron and Steel; Metal Trades; Building, Civil Engineering and Public Works); three sessions of the Governing Body were held at Geneva and one at San Francisco; the Permanent Agricultural Committee and the Permanent Migration Committee met; there was an American Regional Conference, and a Conference of Labour Statisticians; and meetings of experts were held on Safety in Coal Mines, and Statistics.

In the first half of 1950, the International Labour Conference held its 33rd Session at Geneva; there have been three sessions of the Governing Body; the Chemical Industries Committee held its third session; and there have been meetings of experts on Vocational Training of Adults, Social Security, Pneumoconiosis, and Migration.

Canada was represented at all these meetings, full accounts of which are to be found in the *Labour Gazette*.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Canada, more than 3,000 miles in length from east to west, with the main topographic barriers running in a north-south direction, and a relatively small population of 13,921,000 (Sept., 1950 estimate) unevenly distributed along the southern strip of this vast area, presents unusual difficulties from the standpoint of transportation. Different parts of the country are shut off from each other by Cabot Strait, the Strait of Belle Isle, by areas of rough, rocky forest terrain, such as the region lying between New Brunswick and Quebec, the areas north of Lakes Huron and Superior, dividing the industrial region of Ontario and Quebec from the agricultural areas of the prairies, and the barriers interposed by the mountains of British Columbia. To such a country with a population so dispersed and producing for export, as well as for consumption in distant areas of the country itself, cheap transportation is a necessity of life.

In order to appraise the value of each of the agencies of transportation, this Chapter of the Year Book, after treating of government control over agencies of transportation and communication in Part I, deals with the four main agencies, namely, carriers by rail, road, water and air, in Parts II, III, IV and V, respectively.

Scarcely less important than transportation, from the social and economic viewpoints, is the development of communications in a country so vast and with population centres so scattered. Telegraphs and telephones have done much to

lessen distances and make for closer relationships—the rural telephone being of particular social and economic benefit in country districts. The Post Office has been a great factor in promoting solidarity among the people and this same objective is being further aided by radio. In recent times, radio reception and various forms of radio communications have taken a very important place in cultural development and in the economic field generally. The press, assisted by cheap telegraph and cable rates, and by low second-class mail rates to all parts of the country, has been helpful in developing national sentiment. These means of communication are dealt with in Parts VI, VII, VIII and IX.

## **PART I.—GOVERNMENT CONTROL OVER AGENCIES OF TRANSPORTATION AND COMMUNICATION**

### **Section 1.—Government Control Over Agencies of Transportation\***

Carriers by rail, road, water and air are, or should be, inter-related parts of an integral whole where each agency has its place in the efficient provision of necessary transportation. The Federal Department of Transport was organized on Nov. 2, 1936, under authority of c. 34 of the Statutes of 1936, to unify in one Department the control and supervision of railways, canals, harbours, marine and shipping, civil aviation, radio and meteorology.

Roads and highway development is, mainly, under provincial or municipal control or supervision, see Part III.

The business of transportation and communications is, generally speaking, a 'natural monopoly', i.e., a type of enterprise in which service can be more efficiently and economically rendered to the public where one or a few concerns control a particular type of service throughout the country. For this reason there has been a strong tendency toward consolidation and amalgamation over the past half century. The outstanding example of consolidation in Canada in recent years is the concentration of control of the railways of the country in the hands of the Canadian Pacific Railway Company and the Canadian National Railway System.

Such control may bring with it elements of monopoly and possible over-charge, and it has been deemed advisable in Canada, as in other countries, to set up authorities to control the rates to be charged and other conditions under which services to the public are to be rendered by common carriers. This control, so far as the railways under charter or within the jurisdiction of the Federal Government are concerned, is now in the hands of the Board of Transport Commissioners. From time to time the regulatory authority has been extended to a limited extent to other utilities (see under "Air Transport Board", pp. 715-716).

Besides the Board of Transport Commissioners, there exist, in several of the provinces, bodies that undertake among their duties the supervision and control of local public utilities operating under the jurisdiction of the provinces, and the regulation of their rates for service. Among these are the Ontario Department of Municipal Affairs (formerly the Railway and Municipal Board of Ontario, estab-

---

\* This material has been compiled in co-operation with the Board of Transport Commissioners, the Air Transport Board and the Department of Transport.

lished in 1906), the Quebec Commission of Public Utilities established in 1909, the Nova Scotia Board of Commissioners of Public Utilities and the Public Utilities Commission of Manitoba. In the three most westerly provinces these same duties are performed by provincial Departments of Railways.

**The Board of Transport Commissioners for Canada.**—An explanation of the situation that led to the introduction of railway regulation by commission in Canada, as well as other information relating to the organization of the Board of Transport Commissioners' procedure, judgments, etc., is given at pp. 633-634 of the 1940 Year Book.

*Powers of the Board.*—With regard to transport by rail, the powers of the Board cover matters relating to the location, construction and operation of railways. The most important of these has to do with rate regulation. Passenger rates are divided into standard and special; freight rates into standard, special and competitive. Standard rates are maximum rates and the only ones that must be approved by the Board before they are applied. Special and competitive rates, being less than maximum rates, may be applied by railways without the Board's approval, provided that a change of rates has been advertised. Important rate adjustments, however, usually come to the notice of the Board, for a changed rate alters the extent of the territory in which a shipper can compete and on this account he is likely to appeal the case to the Board.

The Board now has jurisdiction over the railways in Newfoundland. These railways have come to form part of the Canadian National Railway System, following the entry of Newfoundland into Confederation, Apr. 1, 1949.

By an amendment to the Railway Act, the regulation of telephone, telegraph and express rates was given to the Board, but with narrower powers than were given to it in dealing with railways. Such rates in Newfoundland also come under the Board's jurisdiction.

Under the Transport Act, 1938, and proclamations of the Governor General in Council made thereunder, the Board has power to issue licences to ships engaged in the transportation of passengers or goods on the Great Lakes, the Mackenzie River and the Yukon River. The Board is required to perform the functions vested in it under the Transport Act and the Railway Act with the object of co-ordinating and harmonizing the operations of all carriers engaged in transport by railways and ships. The Board may require every applicant for a licence under the Transport Act to establish public convenience and necessity to its satisfaction and take into consideration the financial responsibility of a licensee or applicant. The Board may, in the licence, state the ports between which the ships named therein may carry goods or passengers and the schedule of services to be maintained; every standard tariff and every amendment and supplement thereto requires the approval of the Board before it becomes effective.

In 1948 legislation was enacted giving the Board of Transport Commissioners jurisdiction over interprovincial and international pipe lines.

**The Air Transport Board.**—The Air Transport Board was established in September, 1944, as a result of an amendment to the Aeronautics Act (8 Geo. VI, c. 28). The main function of the Board is the economic regulation of commercial air services in Canada, which includes the issue of licences to all such services and

the subsequent regulation of the licensees in respect of tariffs and schedules, public liability, and standards of service to the public. Regulations respecting commercial air services made by the Air Transport Board, under the Aeronautics Act, were approved by Order in Council P.C. 972 of Mar. 25, 1947, and became effective on Apr. 9, 1947. These Regulations, which were made pursuant to amendments to the Aeronautics Act of Dec. 15, 1945 (9-10 Geo. VI, c. 9), deal with the classifications of air carriers, applications for licences, accounts records and reports, traffic, tolls and tariffs, and other related matters. The Aeronautics Act was further amended in 1950; in pursuance thereof new Regulations are (October, 1950) in process of preparation. Detailed regulatory instructions are issued by the Board in the form of directives, which are made consistent with the Regulations. In addition, the Board advises the Minister in the exercise of his duties and powers under the Act in all matters relating to civil aviation.

Consequent upon union of Newfoundland with Canada, commercial air carriers in the new Province came under the jurisdiction of the Air Transport Board in June, 1950. The scheduled air services, heretofore operated by Trans-Canada Air Lines to Newfoundland, were then integrated with the carrier's domestic system. Four other air carriers in the Province have since been licensed by the Board to conduct non-scheduled air services. Furthermore, foreign scheduled air carriers operating through the international airport at Gander came under the jurisdiction of the Air Transport Board, and at Sept. 1, 1950, five of these carriers had been licensed to serve Newfoundland on their transatlantic operations.

The Board takes an active part in the proceedings of the International Civil Aviation Organization, a member of its staff being the Canadian Council Member.

The Board consists of three members, including the chairman, and the staff comprises a Secretary's Branch, which includes the Administration and Licensing Division; an Executive Director who is Legal Adviser to the Board and to the Government of Canada on all matters of domestic and international air law; an Examiner who conducts public hearings by order of the Board; a Traffic Branch; and a Research Aeronautical Engineering Branch.

Financial and operating statistics are collected under authority of the Board's Regulations by the Bureau of Transportation Economics which was established in 1947 under the administration of the Board of Transport Commissioners and serves that Board as well as the Air Transport Board.

Up to Dec. 31, 1949, the Board had issued 31 licences for domestic scheduled commercial air carriers, 14 licences for Canadian international air services, 246 licences for domestic non-scheduled air services and 24 licences to domestic commercial air carriers not involved in transport of passengers and goods. In addition, 17 licences had been issued to foreign scheduled air carriers and 629 permits to foreign non-scheduled air carriers. The following statement shows traffic revenue miles flown during the year 1949.

<i>Service</i>	<i>Total Route Miles</i>	<i>Passenger Miles</i>	<i>Ton Miles</i>	<i>Mail Ton Miles</i>

**The Royal Commission on Transportation.**—The Royal Commission on Transportation was established by Order in Council P.C. 6033 dated Dec. 29, 1948. The terms of reference of the Commission are briefly:—

- (1) To review and report upon the effect of economic, geographic or other disadvantages under which certain sections of Canada find themselves in relation to the various transportation services therein.
- (2) To review the Railway Act with respect to such matters as guidance to the Board in general freight-rate revisions, competitive rates, international rates, etc.
- (3) To review the capital structure of the Canadian National Railway Company and report on the advisability of establishing and maintaining the fixed charges of that Company on a basis comparable to other major railways in North America.
- (4) To review the present-day accounting methods and statistical procedure of railways in Canada, and report upon the advisability of adopting measures conducive to uniformity.
- (5) To review and report on the results achieved under the Canadian National-Canadian Pacific Act, 1933, and amendments thereto.

The Commission held regional hearings beginning June 1, 1949, and terminating Sept. 29, 1949, at the cities of Winnipeg, Man., Regina, Sask., Calgary and Edmonton, Alta., Victoria and Vancouver, B.C., Halifax, N.S., Fredericton, N.B., Charlottetown, P.E.I., Quebec City and Montreal, Que., Toronto, Ont., and St. John's, Nfld. Hearings were also held at Ottawa, Ont., from Nov. 1, to Dec. 16, 1949, and from Feb. 6 to May 31, 1950.

All the provinces, except Ontario and Quebec, submitted representations before the Commission either at the regional or Ottawa hearings. The railways and railway associations, and public bodies and private companies also appeared before the Commission. A list of those appearing before the Commission can be obtained from the Secretary of the Commission if required.

The report of the Commission is expected to be ready for presentation to Parliament early in 1951.

## Section 2.—Government Control Over Agencies of Communication\*

The development and control of radio-communication in Canada from the beginning of the century is outlined at pp. 644-646 of the 1945 Year Book.

The present phase of national radio broadcasting in Canada was entered upon in 1936, when, with the passage of the Canadian Broadcasting Act, the Canadian Broadcasting Corporation replaced the Canadian Radio Broadcasting Commission (see p. 808). The new Act gave the Corporation much wider powers in the operation of the system, and was modelled very largely along the lines of the Act governing the British Broadcasting Corporation. The technical control of all broadcasting stations reverted to the Minister of Transport, who was also empowered to make regulations for the control of any equipment liable to cause interference with radio reception.

Under the Radio Act, 1938, radio stations, including broadcasting stations, may be established only under, and in accordance with, licences granted by the Minister of Transport and, with the exception of those matters covered by the Canadian Broadcasting Act, 1936, radio-communications are regulated under the Radio Act, 1938, and Regulations. Licences for radio stations may be issued only to British subjects or to companies or corporations created or incorporated under the laws of Canada or any of the provinces thereof or any country of the Commonwealth.

\* Revised under direction of G. C. W. Browne, Controller, Radio Division, Department of Transport, Ottawa.

In addition to the requirements of these Acts and Regulations, all radio-communication matters are administered in accordance with the provisions of the International Telecommunication Convention and Radio Regulations annexed thereto, as well as such Regional Agreements as the Inter-American Telecommunications Convention and Inter-American Agreement, and the North American Regional Broadcasting Agreement.

By Order in Council P.C. 2526, dated June 8, 1948, responsibility for telegraph and telephone services formerly operated by the Federal Department of Public Works was transferred to the Minister of Transport. The general object of these services is to furnish wire communications for outlying and sparsely settled districts where commercial companies do not enter into the field and where the population must receive adequate communication services in the public interest.

A Crown Company, Canadian Overseas Telecommunications Corporation, was created by Act of Parliament (Dec. 10, 1949) to acquire for public operation all external telecommunication assets in Canada, in keeping with the Commonwealth Telegraph Agreement, signed May 11, 1948. This Agreement was designed to bring about the consolidation and strengthening of the radio and cable communication systems of the Commonwealth.

Landline telegraph and telephone tariffs and tolls, charged by companies incorporated by the Federal Government, are regulated by the Board of Transport Commissioners under the provisions of the Railway Act.

Tariffs and tolls charged to the public by individuals or companies, for radio telephone or telegraph communications within Canada, are likewise regulated by the Board of Transport Commissioners, under the provisions of the Railway Act, and the Regulations made under the Radio Act, 1938.

As of July 1, 1950, the name of the Radio Division of the Department of Transport is changed to Telecommunications Division.

## PART II.—RAILWAYS\*

The treatment of rail transportation is divided into three Sections dealing, respectively, with steam railways, electric railways and express companies.

### Section 1.—Steam Railways

The steam railway is the most important transportation agency from the standpoint of investment and of traffic handled and the statistical field is more completely covered for this form of transportation than for any other.

**Historical.**—A brief historical sketch of the development of steam railways in Canada is given at pp. 635-638 of the 1940 Year Book. Other details are given at pp. 616-623 of the 1922-23 Year Book, at pp. 601-603 of the 1926 Year Book and at pp. 694-698 of the 1934-35 Year Book. An article at pp. 648-651 of the 1945 edition deals with the wartime role of the steam railways of Canada.

---

\* Revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics. More detailed information is given in the annual reports of the Division. Certain of the financial statistics are compiled in co-operation with the Department of Transport.

## Subsection 1.—Mileage and Equipment

Although construction was begun in 1835 on the first railway in Canada—the short link of 16 miles between Laprairie and St. Johns, Que.—there were only 66 miles of railway in operation by 1850. The first great period of construction was in the 1850's when the Grand Trunk and Great Western Railways, as well as numerous smaller lines, were built. The building of the Intercolonial and the Canadian Pacific Railways contributed to another period of rapid expansion in the 1870's and 1880's. In the last period of extensive railway building from 1900 to 1917, the Grand Trunk Pacific, National Transcontinental and Canadian Northern Railways were constructed.

## 1.—Steam-Railway Mileage, 1900-49

NOTE.—Corresponding figures of total mileage of single track for the years 1835 to 1899 are given at p. 546 of the 1941 Year Book.

Total Mileage (Single Track)						Mileage, by Provinces

<sup>1</sup> As at June 30 for this and previous years.

<sup>2</sup> As at Dec. 31 for this and later years.

Construction of the Newfoundland Railway was begun in 1881 but it was not until 1896 after many difficulties that the transprovincial line from St. John's to Port aux Basques was completed. The railroad now extends over about 705 miles of narrow gauge track—3'6" compared with the standard gauge of 4'8½" in use in the other provinces. Its operations also include coastal steamer service and a dry dock. The railway and steamship services were taken over from private interests by the Government in 1923 in return for a lump settlement of \$2,000,000. The provision of rail and steamship services for the widely scattered population has rarely been profitable, except during the recent war years. When Newfoundland became a province of Canada, Mar. 31, 1949, the Canadian National Railways was entrusted with the operation of the Newfoundland railway facilities and thus added about 4,200 personnel to its payroll.

During the past decade, there has been a tendency for railway mileages to decline slightly because of the abandonment of unprofitable lines. Of the 42,979 miles of single track operated in 1949, over half were Canadian National Railway lines.

**Rolling-Stock.**—The figures in Table 2 may be supplemented by the statement that between 1920 and 1949, the average capacity of box cars increased from 34·779 tons to 43·409 tons, of flat cars from 33·459 to 42·892 tons, of coal cars from 43·404 tons to 59·287 tons, and of all freight cars from 35·141 tons to 45·338 tons. The average tractive power of the locomotive increased from 31,112 lb. in 1920 to 41,923 lb. in 1949.

## 2.—Rolling-Stock of Steam Railways, as at Dec. 31, 1943-49

<sup>1</sup> Includes 46 steam and 3 diesel locomotives, 98 passenger cars and 1,004 freight cars in service in Newfoundland District. <sup>2</sup> Includes Pullman Company cars in Canadian service. <sup>3</sup> Includes 3 auto-railers.

## Subsection 2.—Finances

The tables in this Subsection deal with capital liability, capital investment, earnings, operating expenses, employees and their earnings, and Government aid to steam railways. The financial statistics of the Government-owned railways are given in Subsection 4. Further statistics of revenue are included in Table 9, where they are shown in relation to traffic. Statistics of individual railways, covering single-track mileage, capital, earnings and operating expenses, may be found in the annual report, "Statistics of Steam Railways of Canada", published by the Dominion Bureau of Statistics.

**Capital Liability.**—After 1922 a great increase in the capital liability of the steam railways of Canada took place due to the inclusion of all Government loans to railways and investment in road and equipment of Government railways as part of the capital liability of the railways. The reduction after 1937 was brought about by the Canadian National Capital Revision Act (c. 22, 1937), explained at p. 644 of the 1939 Year Book.

### 3.—Capital Liability<sup>1</sup> of Steam Railways, 1930-49

NOTE.—Figures for the years 1876 to 1925, inclusive, are given at p. 649 of the 1927-28 Year Book and those for 1926-29 at p. 662 of the 1947 edition.

Year	Stocks	Funded Debt	Total	Year	Stocks	Funded Debt	Total
	\$	\$	\$		\$	\$	\$
1930...	1,431,324,003	2,595,145,308	4,026,469,311	1940...	1,762,473,489	1,617,561,683	3,380,035,172

1939...	1,834,329,209	1,533,373,521	3,367,702,730	1949...	1,576,734,292	1,692,898,968	3,269,633,260 <sup>2</sup>

<sup>1</sup> Does not include Canadian railway capital owned by Canadian railways.  
debt due to railways in Newfoundland, approximately \$40,000,000, is not included.

<sup>2</sup> Assumption of

**Capital Investment.**—The increase in capital liability during 1949 of \$19,293,756 from 1948 as shown in Table 3 compares with an increase in investments in road and equipment of \$102,749,522 as shown in Table 4 and reflects improvements made during the year. The investment account in recent years has been affected by write-offs for lines abandoned, transfers of property to other Government Departments, etc., as well as by higher gains in earnings during the war years.

<sup>1</sup> Details of this item are given in the annual report "Statistics of Steam Railways of Canada" issued by the Public Finance and Transportation Division of the Dominion Bureau of Statistics.  
<sup>2</sup> Includes expenditures for Newfoundland from Apr. 1, to Dec. 31.

**Earnings and Expenses.**—The operating ratio, or ratio of expenses to revenues, of Canadian railways increased from around 70 p.c. to over 90 p.c. between 1917 and 1920, and remained high thereafter, due largely to declining revenues without corresponding reductions in expenses during the depression period. The period from 1938 to 1943 showed a sharp decline in this ratio, due primarily to the greatly increased freight traffic occasioned by the Second World War and a subsequent acceleration in gross earnings. A steadily rising trend has been in evidence since 1943 caused by higher costs for materials and labour.

#### 5.—Earnings and Operating Expenses of Steam Railways, 1940-49

NOTE.—Gross earnings and operating expenses for the years 1875 to 1914 are given at p. 434 of the 1916-17 Year Book; those for 1915-25 at p. 550 of the 1941 Year Book; and for 1926-38 at p. 585 of the 1942 Year Book.

<sup>1</sup> Includes Newfoundland Railways from Apr. 1.

**Employment and Salaries and Wages.**—The number of employees registered an increase in 1949 over 1939 of almost 49 p.c. while salaries and wages increased by about 160 p.c. The latter rise was due to an increase in time worked per employee, also to increased rates of pay. Maintenance of equipment employees, on hourly rates, worked about 9 p.c. more hours and were paid nearly 71 p.c. more wages per employee; average hours worked by transportation employees were slightly less than the 1939 average and their pay was increased by about 68 p.c.

**7.—Steam Railway Employment and Salaries and Wages, 1940-49**

NOTE.—Figures for the years 1912-39 are given at p. 551 of the 1941 Year Book.

Year	Employees <sup>1</sup>	Total Salaries and Wages <sup>1</sup>	Average Salaries and Wages	Ratio of Operating Salaries and Wages Chargeable to Operation Expenses to—

1949.....	192,366 <sup>3</sup>	523,453,375 <sup>3</sup>	2,721 <sup>3</sup>	52.9	56.9

<sup>1</sup> Figures include employees or wages for "outside operations" amounting to from 3 p.c. to 6 p.c. of total employees and from 2 p.c. to 5 p.c. of total salaries and wages. <sup>2</sup> Includes approximately \$10,000,000 in wages earned in 1943. <sup>3</sup> Includes Newfoundland Railways from Apr. 1.

**Government Aid to Railways.**—In order that the private railways of Canada might be constructed in advance of settlement, as colonization roads, or through sparsely settled districts where little traffic was available, it was necessary for Federal and Provincial Governments and even for municipalities to extend some form of assistance. The form of aid was generally a bonus of a fixed amount per mile of railway constructed and, in the early days, grants of land other than for right-of-way were also made.

As the country developed, the objections to the land-grant method became more apparent, and aid was more frequently given in the form of a cash subsidy per mile of line, a loan or a subscription to the shares of the railway. Guarantees of debenture issues were given in a later period and, since the formation of the Canadian National Railways, all debenture issues of that System, except those for rolling-stock, have been guaranteed by the Federal Government. No new land grants or cash subsidies have been advanced by either the Federal or Provincial Governments since 1939. The situation, as it existed at Dec. 31, 1940, is set out at pp. 587-588 of the 1942 Year Book.

During the era of railway expansion before the First World War, Provincial Governments guaranteed the bonds of some railway lines that afterwards were incorporated in the Canadian National Railway System. As these bonds mature or are called they are paid off by the Canadian National Railways, in large measure, through funds raised by the issue of new bonds with Federal Government guarantee. In this manner, bonds guaranteed by the Governments of Ontario, Manitoba, Saskatchewan, Alberta and New Brunswick have been eliminated in recent years.

### 8.—Railway Bonds Guaranteed by Federal and Provincial Governments, as at Dec. 31, 1949

<b>Totals<sup>2</sup></b> .....	<b>532,721,568</b>	<b>465,000</b>	<b>533,186,568<sup>1</sup></b>

<sup>1</sup> Does not include \$6,985,175 perpetual debenture stock and guaranteed stock of the former Grand Trunk Railway, now part of the Canadian National Railway System, on which interest and dividends are guaranteed by the Federal Government.

<sup>2</sup> Newfoundland not included.

### Subsection 3.—Traffic

**Passenger and Freight Traffic.**—Table 9 shows the passenger and freight statistics for all steam railways for the years 1940-49. A separate analysis is given at pp. 731-732 of the operations and traffic of the Canadian National Railways. Since this System is controlled by the Federal Government, the information is considered of special interest.

### 9.—Statistics of Passenger and Freight Services and Revenue Receipts, 1940-49

NOTE.—Figures from 1910-39 are given in the corresponding tables of previous Year Books.

<sup>1</sup> Includes express, baggage, mail and other cars. <sup>2</sup> Duplications included. <sup>3</sup> Does not include Newfoundland. <sup>4</sup> Includes caboose miles and excludes miles made in passenger and non-revenue trains. <sup>5</sup> Duplications eliminated; see Table 10 for details of freight carried.

**Commodities Hauled.**—Revenue freight carried by the railways in 1949 has showed a decrease of 7.9 p.c. since 1948. The peak volume was reached in 1944. The average haul was increased from 381 miles in 1948 to 395 miles in 1949 but ton-miles decreased. The principal commodities showing increases over 1948 were live stock, anthracite coal, bituminous coal, coke, ores and concentrates, sand and gravel, base metals, and other mine products. Pulpwood also moved in heavier volume while most items in the manufactured and miscellaneous group registered improvement. During the war years the intransit movement of war supplies, motor-vehicles, and gasoline and petroleum products between United States points over Canadian lines was particularly heavy and, with wheat, was responsible for the 1944 record.

## 10.—Commodities hauled as Freight on Steam Railways, 1945-49

NOTE.—In this table duplications are eliminated, i.e., the same freight handled by two or more railways is counted only once. The statistics do not include the United States lines of the Canadian National Railways, but the link of the Canadian Pacific Railway line across Maine, U.S.A., is included, as are the Canadian sections of United States railways.

1949 <sup>2</sup> .....	1	316	71	8,794	257	824	329	9,934

<sup>1</sup> Includes trespassers walking along tracks, stealing rides, etc., and persons crossing tracks at level crossings.

<sup>2</sup> Includes Newfoundland from Apr. 1.

These accidents include all those in which railway trains were involved and accidents on railway property. The classification of accidents used in the Dominion Bureau of Statistics vital statistics treats collisions between motor-vehicles and trains as motor-vehicle accidents; provincial statistics also class them as motor-vehicle accidents and, consequently, adjustments should be made when compiling total accidental deaths of all kinds or comparing results of accidents of different kinds, such as train and motor-vehicle.

## Subsection 4.—The Canadian National Railway System

A description of the origin and growth of Government-owned railways in Canada is given at pp. 601-603 of the 1926 Year Book. That article describes their consolidation under the Canadian National Railways in 1923. The Hudson Bay Railway is a direct liability of the Federal Government and has been operated by the Canadian National Railways for the Government since Apr. 1, 1935, but is not included in the data for Canadian National Railways; to Mar. 31, 1949, the total capital expenditure on this account was \$33,267,965 exclusive of the expenditure of \$6,240,096 on the terminal at Port Nelson, Man., and a loss of \$4,782,971 on operation. The operating deficit for the fiscal year 1948-49 was \$399,544.

On Apr. 1, 1949, the Canadian National Railways took over the operation of the Newfoundland Railway embracing its 705 miles of line, 14 coastal steamers and a dry dock at St. John's. The communications services of the Newfoundland Government Posts and Telegraphs were also transferred to the Canadian National Railways for operation at the same time. (The Newfoundland Hotel was added towards the end of the year.)

The major portion of Federal Government investments in railways consists of construction costs of the Intercolonial System, the National Transcontinental Railway and the Hudson Bay Railway, and the purchase price of small railways in the Eastern Provinces.

In view of the interest in the publicly owned railway system, the following salient statistics are presented showing the assets, debt, operating accounts, mileage and traffic for the System. More detail is available from the report "Canadian National Railways, 1923-49", published by the Dominion Bureau of Statistics.

## 13.—Assets of the Canadian National Railway System, as at Dec. 31, 1922 and 1949

<b>Totals, Unadjusted Debits.....</b>	<b>15,697,557</b>	<b>8,878,630</b>	<b>—6,818,927</b>
<b>Grand Totals.....</b>	<b>1,958,031,203</b>	<b>2,478,083,586</b>	<b>+520,052,383</b>

<sup>1</sup> Includes demand loans and deposits.<sup>2</sup> Includes 1949 deficit of \$42,043,027 receivable from

Federal Government.

<sup>3</sup> Decrease in current liabilities \$3,843,949.<sup>4</sup> Figures do not include

Newfoundland.

**Capital Structure and Debt.**—The share capital on Dec. 31, 1922, consisted of \$165,627,739 stock of the Grand Trunk Railway held by the Federal Government and \$100,000,600 of the Canadian Northern Railway stock also held by the Federal Government. There was also outstanding \$4,591,975 stock of constituent lines held by the public. Table 14 shows the capital liabilities of the Canadian National Railways, other than shareholders' capital. The amounts shown under "Active Assets" represent, largely, temporary loans and explain the large increases during the war years.

### 14.—Debt of the Canadian National Railway System, as at Dec. 31, 1940-49

NOTE.—Figures for the years 1922-39 are given at p. 591 of the 1942 Year Book.

NOTE: Figures for the years 1942 to 1949 are given in parentheses and 1949 is preliminary.						
At Dec. 31—	Funded Debt Held by Public			Government Loans and Advances— Active Assets in Public Accounts	Appropriations for Canadian Government Railways <sup>1</sup>	Grand Totals <sup>2</sup>

1948.....	490,485,399	1,952,108	91,795,151	743,722,844	16,771,981	2,123,537,672
1949 <sup>3</sup> .....	537,756,899	1,949,845	85,159,176	726,889,181	16,771,981	2,147,536,088

<sup>1</sup> Working capital, the remainder of the account being eliminated (see p. 591 of the 1942 Year Book).<sup>2</sup> Includes Federal Government Proprietors Equity and capital stock held by the public; for detail see "Canadian National Railways", Dominion Bureau of Statistics Report.<sup>3</sup> Exclusive of Newfoundland.

**Operating Finances.**—Gross revenues, operating expenses and net revenues include only those from steam railway and commercial telegraph operations, but the deficits are for the entire System, including the operating results of the Niagara, St. Catharines and Toronto Railway (electric) and other railways operated separately, hotels, commercial telegraphs, coastal steamships and all other outside operations.

Under the Canadian National Railways Capital Revision Act (c. 22, 1937), interest on Federal Government loans, amounting to \$530,832,598, and Government claims for interest, amounting to \$43,949,039, were cancelled as liabilities of the Railway and these have been eliminated from Table 15 as fixed charges. Loans of \$270,037,438 for capital and \$373,823,120 for deficits were cancelled.

#### 15.—Gross Revenues, Operating Expenses, Net Revenues, Fixed Charges and Deficits of the Canadian National Railway System,<sup>1</sup> 1940-49

NOTE.—Appropriations, etc., for the Hudson Bay Railway are not included with these data; although the Railway was returned to the Government while under construction, it is not now a part of the Canadian National Railways. Figures for 1911-25 are given at p. 660 of the 1936 Year Book and for 1926-39, at p. 590 of the 1942 edition.

Year	Gross Operating Revenues	Operating Expenses	Income Available for Fixed Charges	Total Fixed Charges	Net Income Deficit <sup>2</sup>	Cash Deficit

cluded.

## Section 2.—Electric Railways\*

Replacing the horse-car systems, used in Montreal and Toronto as early as 1861, electric street railways were first seen in operation in Canada in 1885, when a successful experimental railway was constructed and operated at the Toronto Exhibition Grounds. Before many years their safety and convenience resulted in the discarding of the older systems. The first electric railway line in Canada, and probably the first in North America, ran between Windsor and Walkerville and was established early in June, 1886 (it is recorded that it was in active operation before June 11).

The cheap and reasonably rapid conveyance of human beings is a necessity of modern urban life. In the cities of Eastern Canada, some electric street railways are still operated by private companies under city franchises, while in a considerable number of cities in Ontario and the West the electric railways are owned and operated by the municipalities. The number of electric railways in operation declines each year as motor buses replace electric trams.

Statistics presented cover the urban and interurban operations of the electric railway systems.

**Equipment.**—The single overhead-trolley system is used by all electric railways, but Montreal, Toronto, Winnipeg, Vancouver and several other municipalities have begun to use trackless trolley-buses (710 of these buses being in service in 1949). Of the 25 systems, 16 operated both electric cars and motor-buses in 1949, the buses numbering 1,775. The main advantage of the bus is that it is not confined to a fixed route and, in the case of both motor-buses and trolley-buses, the expense of track maintenance is eliminated.

### 18.—Equipment of Electric Railways, 1946-49

**Finances.**—When electric railways have ceased to operate because of either a decline in traffic or the substitution of motor-buses, their statistics have been excluded from Table 19. Consequently, fluctuations in revenues, etc., have been affected by variations in traffic and also by changes in the mode of local transportation. Despite these changing conditions, the gross revenues of electric railways continued to increase since the low point reached in 1933, and very marked increases were shown from 1940 to 1945. The ratio of expenses to receipts rose from a low of less than 63 p.c. in 1942 to 98 p.c. in 1949.

\* For further details see "Electric Railways of Canada, 1949" published by the Dominion Bureau of Statistics.

## 19.—Financial Statistics of Electric Railways, 1939-49

NOTE.—Figures for 1901-38 are given in the corresponding table of previous Year Books beginning with the 1926 edition.

1949.....	27,425,491	143,948,307	171,373,798	223,216,696	90,984,680	89,326,328	98-18	21,865	57,628,904

<sup>1</sup> Mainly reduction, \$1,602,500 stock Hamilton Street Railway.

**Traffic.**—The passenger mileage travelled by electric cars in 1949 amounted to 98,158,055, by trackless trolley-buses 20,623,666 and by motor-buses 54,851,497. The number of passengers carried by electric railways in the years since 1939 showed an especially sharp rise over previous years due to improved conditions, and the curtailment of passenger automobile traffic during the War. The 1,344,916,773 passengers carried in 1946 was by far the greatest traffic ever handled by these systems; the number was lower in 1948 and 1949.

## 20.—Statistics of Electric Railway Operations, 1939-49

NOTE.—Figures for 1901-38 are given in the corresponding tables of previous Year Books beginning with the 1933 edition.

**The Toronto Underground Electric Railway.**—Canada's first underground electric railway, at Toronto, Ont., was one of the planned major developments upon which work was commenced during 1949. The subway or underground railway will run north-south following the line of Yonge St. to Queen St. The opening is scheduled for the late autumn of 1953. The estimated cost of both the Yonge and Queen Sts. subways is placed at over \$50,000,000. The total distance covered by the rapid transit lines will be some 9.1 miles and in the most congested areas of the city. The subway will descend from 6 ft. to a maximum of 20 ft. below the street surface. Considerable new equipment is on order and it is proposed to operate trains up to 5 two-car units in length. The ultimate capacity of the System is estimated at 40,000 passengers per hour in both directions. Excavations on the Yonge Street project alone involves the removal of about 1,390,000 cubic yards of material.

## Section 3.—Express Companies

Express service is an expedited freight service on passenger trains, but express companies do not own the means of performing their services; they use railway facilities by virtue of contracts with the railway companies. Express companies in Canada have always had close relations with the railways.

Goods are sent by express for quick transit, so that express rates do not generally compete with freight rates. Thus, in its first tariff the Dominion Express Company, in pursuance of its contract with the Canadian Pacific Railway, gave a rate of 2½ times the maximum first-class railway freight rate for the same goods carried the same distance. The majority of the contracts between express and railway companies for carrying express freight are on the basis of a percentage of the gross express revenue. The rates paid by the shipper are subject to the approval of the Board of Transport Commissioners. Express companies are all organized under powers conferred by Acts of the Federal Government and their business consists in the expeditious shipment of valuable live stock, and such perishable commodities as fresh fish, fruit, etc., the forwarding of parcels, and the issue of money orders, travellers cheques, letters of credit and other forms of financial paper.

**Express Company Operations.**—Four express organizations operate in Canada—three Canadian and one American. The Canadian Pacific Express Company, formerly the Dominion Express Company, is a subsidiary of the Canadian Pacific Railway and handles the express business on the railways and the inland and ocean steamship lines of the parent company. The express business of the Canadian National and Northern Alberta Railways is handled by departments of the respective railways. The Railway Express Agency, Incorporated, operates over the Canadian sections of United States railways and over the route from Skagway to points in Yukon. No statistics are available regarding the volume of traffic carried by express. Much of the traffic consists of parcels and small lots that would make statistical classification and measurement very difficult. However, there is also an important movement in car lots of live stock, fresh fish, fruit, vegetables and other perishable commodities.

## 22.—Mileages Operated, Revenues and Expenses of Express Companies, 1940-49

NOTE.—Figures for 1911-39 are given in the corresponding tables of previous Year Books beginning with the 1927-28 edition.

<sup>1</sup> Including 1,641 seamen shipped and 1,288 seamen discharged in Newfoundland during the period Apr. 1 to Dec. 31, 1949.

**Canadian Government Merchant Marine, Limited.**—The circumstances under which the Canadian Government became possessed of, and responsible for, the operations of a merchant marine are explained at p. 776 of the 1934-35 Year Book. A table showing the operating results from 1919 to 1936 is given at p. 689 of the 1937 Year Book.

The original fleet of the Canadian Government Merchant Marine, Limited, consisted of 66 vessels with a total deadweight tonnage of 391,212. The original cost of the fleet was \$79,661,921 and the capital loss thereon was \$74,239,356, the total capital recovery of \$5,422,565 being made up as follows: (1) the sale of 56 vessels for \$2,378,018; (2) the proceeds of insurance on four vessels lost, amounting to \$2,111,475; (3) the sale of six vessels for \$933,072 to the Canadian National (West Indies) Steamships, Limited.

The charter of the Canadian Government Merchant Marine, Limited, and its subsidiary companies, although inactive since 1936, had not been surrendered and in 1940 the Company was reconstituted and is operating, on behalf of the Canadian Government, certain ships seized in prize and either requisitioned for use by the Canadian Government or condemned by the Court. Settlement with the owners of requisitioned ships for charter hire has not been completed.

**Canadian National (West Indies) Steamships, Limited.**—In conformity with the Canada-West Indies Trade Agreement of 1926 (16-17 Geo. V, c. 16) the Federal Government has provided direct steamship services to the West Indies through the medium of Canadian National (West Indies) Steamships, Limited.

At the end of 1949, the Canadian National Steamships owned and operated 10 vessels in service between Canada and the British West Indies.

### 20.—Financial Statistics of Canadian National (West Indies) Steamships, Limited, 1940-1949

NOTE.—Figures for the years 1929-38 are given at p. 620 of the 1942 Year Book and for 1939 at p. 777 of the 1950 edition.

## Section 2.—Financial Statistics of Waterways

The principal statistics available that give any idea of the cost of water-borne traffic consist of the record of public expenditures on waterways. Such expenditures may be classified as capital expenditures, or investments and expenditures for maintenance and operation. Revenues from operation are also recorded. Undoubtedly, in so far as capital expenditures for the permanent improvements of waterways are concerned, those of the Federal Government cover the major part. There has been some expenditure by municipalities on local harbour facilities, and private capital expenditure is also confined almost entirely to terminal or dockage facilities. The investment in shipping, however, with the exception of the Canadian Government Merchant Marine, Limited, and the Canadian National (West Indies) Steamships, Limited, has come almost entirely from private sources. No figures are available regarding private investment in shipping except those appearing in the reports of the operating companies which cover only a portion of the field. There are no statistics showing the revenues of ship operators from passenger and freight traffic.

**Capital Expenditures.**—The only figures available of capital expenditures on Canadian waterways are those compiled from the Public Accounts and the annual reports of the Departments of Transport, Public Works and Finance. However, such expenditures cannot be regarded as any indication of the present worth of the undertakings represented. The costs of building canals and other waterways and permanent works to facilitate water transportation in Canada are represented in such reports at their original book values, no deductions having been made from the cumulative totals for depreciation from year to year or for abandonment of earlier works where they had been superseded, as in the first Welland Canals for instance. To this extent such figures are an overstatement of the present value of the works in use. There is a further limitation that should be noted in regard to such figures: they do not include the costs of maintenance and improvements or the operation of these works, such charges having been made to the Consolidated Deficit Account as annual expenditures and not to capital account. Table 21, which shows capital expenditures on canals, marine service and miscellaneous water-transport facilities to have reached the grand total of \$390,953,995, must be interpreted with the above qualifications in mind. In Table 22, the capital values of the fixed assets administered by the National Harbours Board are shown as at Dec. 31, 1948, and 1949: these are in addition to the capital expenditures of Table 21. These figures reflect the capital situation in regard to the national harbours of Canada far better than do those of Table 21 in the case of waterways and facilities, inasmuch as they include all buildings, machinery and durable plant improvements; they also have been subject to deductions for depreciation and the scrapping or abandonment of plant and more nearly approach the present value of the properties under the administration of the National Harbours Board.

Table 23 shows the amounts advanced by the Federal Government to the National Harbours Board for capital expenditures from 1947 to 1949.

NOTE.—Compiled from the Annual Reports of the Department of Transport, the Department of Finance and the Department of Public Works.

<sup>1</sup> These are works not covered elsewhere in these tables, and are shown in the Public Accounts as Schedule K to the Balance Sheet.

## Waterway Expenditures and Revenues on Consolidated Fund Account.—

Expenditures under this heading (Tables 24 to 26) are mainly for the operation and maintenance of various facilities for water transport, but unfortunately the line between operation and maintenance expenditure is not as finely drawn as is desirable.

In addition to the recurrent expenditures to facilitate water transportation shown here, the Federal Government expends annually a considerable amount to cover deficits of the Canadian National (West Indies) Steamships, Limited, and of the National Harbours Board, for mail subsidies and steamship subventions as shown in Table 29. Operating expenditures and revenues of facilities administered by the National Harbours Board are shown separately in Table 28. The National Harbours Board operates as a statutory corporation. The improvement in the financial results since control was unified under the Board is indicated by the increase of consolidated operating income from \$2,452,000 in 1935 to \$5,912,075 in 1949. Revenues in connection with waterways of the Department of Transport and the Department of Public Works are shown in Table 27.

**Canadian Maritime Commission.**—By authority of an Act (11 Geo. VI, c. 52) passed in the 1947 session of Parliament, the Canadian Maritime Commission was constituted for the purpose of examining into, keeping records of, and advising the Minister of Transport on matters pertaining to Canadian shipping and ship-building services.

In addition to these duties the Act also empowers the Commission to:—

- (1) exercise and perform on behalf of the Minister such powers, duties and functions of the Minister under the Canada Shipping Act, 1934, as the Minister may require;
- (2) administer, in accordance with regulations of the Governor in Council, any steamship subventions voted by Parliament; and
- (3) exercise or perform any other powers, duties or functions conferred on or required to be performed by the Commission by or pursuant to any other Act or order of the Governor in Council.

Since the Canadian Maritime Commission was created, it has assumed all responsibilities for the administration of steamship subventions which had formerly been under the jurisdiction of the Department of Trade and Commerce.

As of Feb. 1, 1948, the Park Steamship Company, a Crown Company originally formed to administer and operate wartime shipping built in Canada as a war measure, was transferred from the Minister of Reconstruction and Supply to the Minister of Transport. The Chairman and Commissioners of the Canadian Maritime Commission were appointed as the President and Directors of the Company.

Since the Second World War, the Park Steamship Company has acted as an agent of Crown Assets Corporation in the sale and delivery to purchasers of Government war-built ships. These duties will probably be completed early in 1951.

**Shipping Subsidies.**—The figures given in Table 29 represent the amounts paid in connection with contracts made under statutory authority by the Canadian Maritime Commission for coastal and inland water-shipping services, including the conveyance of mails on certain routes.

<sup>1</sup> These two services have now been combined.

## PART V.—CIVIL AIR TRANSPORTATION\*

### Section 1.—Development and Administration

**Historical Developments.**—Canada's aviation history dates back to 1909 when the *Silver Dart* piloted by Jack McCurdy (now the Hon. J. A. D. McCurdy, Lieutenant-Governor of Nova Scotia) flew at Baddeck, N.S. This was the first aeroplane flight by a British subject in the British Empire.

There was little aviation development in this country until the First World War. Following the War, many of Canada's wartime aviators assisted in developing air transportation services into inaccessible areas, air forestry patrols and inter-city air services. During this period, the flying clubs movement received Government assistance in the training of pilots and engineers required by Canada's civil aviation industry.

The Department of Transport was created in 1936 to centralize all transportation services coming under Federal Government jurisdiction. The Air Services Branch combined the Civil Aviation Division, formerly attached to the Department of National Defence, and the Department of Marine's Meteorological and Radio Divisions. Under the Department of Transport, the trans-Canada airways system was developed by the construction of a chain of airports, intermediate aerodromes and other air facilities. The Trans-Canada Air Lines came into being by Act of Parliament in 1937 to provide for the development of a government-controlled transcontinental air service.

The Second World War was a period of intensive construction of airports and aerodromes to meet the requirements for training of airmen under the British Commonwealth Air Training Plan. At the end of the War, many Service-trained Canadian airmen turned to commercial flying and were absorbed in existing operating companies or helped to develop other flying services. Transatlantic air services, which were inaugurated by the Department of Transport during the War, were turned over to Trans-Canada Air Lines for operation as regular scheduled operations. Canadian Pacific Air Lines was created by the amalgamation of small commercial operators for the servicing of Canada's northland. In 1949 the Canadian Pacific Air Lines was designated to provide trans-Pacific services on behalf of Canada and began its scheduled operations from Vancouver to Australia and New Zealand in July of that year and to Japan, China and Hong Kong in September.

**The Control of Civil Aviation.**—The control of civil aviation in Canada is under the jurisdiction of the Federal Government and is administered under the authority of the Aeronautics Act, 1919, and amendments thereto. The Aeronautics Act is in three parts. Broadly speaking, Part I deals with the technical side of civil aviation, comprising matters of registration of aircraft, licensing of airmen, the establishment and maintenance of airports and facilities for air navigation, air traffic control, accident investigation and the safe operation of aircraft. This Part of the Act is administered by the Controller of Civil Aviation under the supervision of the Director of Air Services, Department of Transport. Part II of the Act deals with the social and economic aspects of commercial air services and assigns to the Air Transport Board certain statutory functions with respect to the regulations of commercial air services. Part III of the Act deals with matters of internal government administration in connection with the Act.

\* Sections 1 and 2 of this Part were revised in the Department of Transport and Section 3, except where otherwise indicated, in the Transportation Section, Public Finance and Transportation Division, Dominion Bureau of Statistics. For military air transportation, see Chapter XXVII on Defence of Canada.

**Civil Aviation in Newfoundland.**—Previous to the federation of Newfoundland with Canada, the Newfoundland Commission Government had established a Civil Aviation Division to administer aviation matters and had published its own Air Regulations. After the federation, these Regulations were replaced by the Air Regulations of Canada, and the Civil Aviation Division of the Department of Transport assumed responsibility for all aviation matters in the new province.

There were 12 commercial aircraft and no private aircraft registered. Two commercial operators were getting well established, one at Torbay and one at Gander, and were providing charter services. Two industrial companies owned their own aircraft—a mining concern and a paper manufacturer.

Transatlantic service was flourishing. All airlines engaged in this work had permission to use Gander Airport but only British Overseas Airways Corporation and Trans-Canada Airways were allowed to carry passengers to or from Gander. T.C.A. established a service through Gander in 1943, on one of its domestic runs.

The following were the chief Newfoundland airports at the time of union:—

*Gander*—The largest field on the Island and formerly an international airport under Newfoundland jurisdiction, was turned over to the Federal Government with the provision that it should continue to be operated as an international airport.

*Torbay*—This airport is now jointly owned by the Department of Transport and the Newfoundland Government, and is operated by the Department of Transport.

*Buchans*—The Buchans Airport was constructed and operated by the Department of Transport under a 30-year lease on the property dating from 1943.

*Botwood*—The only water airport of any consequence was the large base at Botwood which was used extensively during the Second World War by Pan American Airways and B.O.A.C. who were flying large transoceanic flying boats. This base had been abandoned by the Newfoundland authorities before union.

*Stephenville and Argentia*—During the Second World War, the United States Government had established military air bases at Stephenville and Argentia. By the terms of union, the United States Government retained these airports on the understanding that T.C.A. could make two calls daily at Stephenville on the Sydney-Gander-Torbay service.

**Recent Developments in Ground and other Facilities.**—Airports and aerodromes coming under the jurisdiction of the Department of Transport have been improved and enlarged to meet the requirements of larger and heavier aircraft. Instrument Landing Systems (ILS) designed to facilitate safe landings under low visibility conditions have been installed in 10 airports and installations are being made in six others. Twelve of Canada's civil airports are regular ports of call for international commercial air services.

Expansion of the weather forecasting services of the Meteorological Division of the Department of Transport has been made possible by the establishment of additional weather-observing stations in Arctic and sub-Arctic regions. Canada has undertaken to maintain a weather-observing station, manned by three weather ships in the Pacific Ocean, 300 miles off Vancouver Island, for meteorological purposes. This weather station was established in December, 1950, as a result of Canada's undertaking with International Civil Aviation Organization. Canada's part-time operation of a weather station in the Atlantic Ocean is being assumed by the United States.

**Royal Canadian Flying Clubs.**—At the end of 1949 there were 33 member clubs of the Royal Canadian Flying Clubs Association with total individual membership of 5,200. During the year, 25,720 instructional hours were flown and the number of aircraft utilized for instructional purposes was 124; the number of students who completed tests as pilots was 366.

**Air Industries and Transport Association.**—Commercial Flying Schools, which are members of the Air Industries and Transport Association, numbered 70 at the end of 1949. During the year 1949, the number of students passing pilots' tests was 437; the number of instructional hours flown was 31,844.

**International Air Agreements.**—The position of Canada in the field of aviation as well as its geographical location makes co-operation with other nations of the world engaged in international civil aviation imperative. Canada played a major part in the original discussions that led to the establishment of the International Civil Aviation Organization, generally known as ICAO, which has its headquarters at Montreal, Que. Canada has participated actively in the deliberations of ICAO and its many committees and, as a result, has secured the benefit of the joint knowledge and experience of all member states in the technical and economic aspects of all phases of civil aviation.

In recent years, Canada has been a signatory to agreements concerning civil aviation with Australia, Ireland, Netherlands, Portugal, Sweden, United Kingdom, United States and, prior to federation, with Newfoundland.

Since the union of Newfoundland with Canada on Mar. 31, 1949, bi-lateral air agreements have been signed between Canada and the United States, the United Kingdom, Belgium and France.

On the North Atlantic, Trans-Canada Air Lines has been given new rights in the United Kingdom for traffic from Ireland, Iceland and the Azores. It has been given rights in Brussels by the Belgian Government and landing rights in France by the French Government adding other possible continental stops to the one previously granted at Amsterdam in the Netherlands.

On the Caribbean route, Canada has obtained rights from the United States for a traffic stop at Tampa—St. Petersburg, Florida, and additional points of call at British territories in the Caribbean, notably Barbados, Antigua and British Guiana.

In the trans-border field, Trans-Canada Air Lines has been given the right to operate from Montreal, Que., to New York, N.Y.

In the Pacific, new agreements provide that on its south-Pacific run Canadian Pacific Air Lines may also make traffic calls at Honolulu and at Fiji. On the north-Pacific route Canadian Pacific Air Lines has been given traffic rights at Hong Kong.

## Section 2.—Air Services

**Air Transport Services.**—These services are grouped into two broad classes—Scheduled Services and Non-Scheduled Services.

Scheduled Services provide regular point-to-point service on scheduled advertised routes and Non-Scheduled Services include:—

- (1) Specific Point Services from a designated base to specific points on the basis of unit rates that may be undertaken as the traffic warrants and that are not on a time schedule;
- (2) Chartered Services operated on the basis of the private chartering of an entire aircraft for a specific trip;
- (3) Contract Air Services which operate on one or more specific contracts. These do not operate on a time schedule nor need the contractor take the entire space of the aircraft;
- (4) Specialty Air Services concerned with large-scale forestry and utility surveys according to some specific agreement.

**Trans-Canada Air Lines.**—The addition of 20 forty-passenger *North Star* aircraft to the Company fleet in 1949 enabled Trans-Canada Air Lines to provide modern air transportation service on a considerably larger scale. The Company has a route pattern which serves more than 40 communities in Canada, the United States, the British Isles and the Caribbean area. This system covers more than 16,000 route miles of scheduled service of which 8,085 miles is in the North American Service and 8,303 miles in the Atlantic Service.

During the year 1949, emphasis was placed on the improvement of services already established; 100 flights were planned daily and 98 p.c. of all scheduled mileage was completed. During the year, more than 680,000 passengers were carried on domestic and international flights, also 3,500,000 ton miles of cargo and 3,800,000 ton-miles of mail were flown with a fleet consisting of 20 *North Stars* and 27 *DC.3's*. The sum total of the Company's domestic and international operations for the year ended Dec. 31, 1949, amounted to 84,000,000 ton-miles of air transportation.

**North American Services.**—On May 1, 1949, a third transcontinental service between Montreal, Que., and Vancouver, B.C., went into operation. This additional flight was routed through Edmonton, Alta., and Saskatoon, Sask.

In the domestic service, the development of commodity transport, particularly in the shipment of perishables, was 50 p.c. greater than in 1948 when air cargo service was inaugurated. The "all up" mail service was continued and the volume of mail carried, as measured on a ton-mileage basis, increased by 48 p.c. An over-all decrease in the cost of air travel and improved service standards attracted a record number of 648,574 revenue passengers to the airline as compared with 532,555 in 1948.

excluded each year except in 1946, 1947, 1948 and 1949.

<sup>4</sup> Includes interest on capital invested.

*Trans-Canada Air Lines (Atlantic) Limited.*—Trans-Canada Air Lines performed approximately 1,000 routine Atlantic crossings during 1949 and maintained regular services to Bermuda. During the summer season, TCA maintained an operational frequency of two round trips daily on the North Atlantic route, though this schedule was reduced considerably during the winter and spring months.

On June 1, 1949, regular flights to Bermuda were extended to Trinidad and on Dec. 2 to the Barbados.

There was an increase of 68 p.c. in commodity ton-miles carried on the Atlantic services. The number of revenue passengers carried increased from 32,821 in 1948 to 36,512 in 1949. Mail ton-miles increased by 10 p.c.

**Canadian Pacific Air Lines, Limited.**—For the Canadian Pacific Air Lines, Limited, 1949 was a year of expansion and development. The most outstanding event was the inauguration of services from Vancouver, B.C., to south-Pacific ports and to the Orient.

On July 10, 1949, a fortnightly service to Honolulu, Fiji and Australia with connecting services to New Zealand from Fiji was started and two months later a weekly service to Tokyo and Hong Kong was in operation. *Canadair IV* aircraft, built at Montreal to CPAL specifications were used on these new services.

The granting of the privilege of deplaning and picking up passengers and an inter-company agreement with United Airlines for the interchange of passengers at Honolulu increased the passenger potential of this service. The Pacific services added 15,270 route-miles to the Company's total which amounted to 25,957 route-miles at the end of 1950. The offices of the CPAL were consolidated at Vancouver, B.C., prior to the commencement of the Pacific services. The CPAL fleet consists of 31 aircraft:—3 *Canadair C4-1's*; 16 *Douglas DC. 3's*; 5 *Lodestars*; 3 *Cansos*; 2 *Ansons*; and 2 *Norsemen*.

*Domestic Lines.*—Increase in route mileage of domestic lines during 1949 was brought about by the inception of a non-scheduled service from The Pas to Churchill, Man. Route-mileage of domestic lines at the end of 1950 was 10,687. An additional service was put into operation in April, 1950, between Prince George and Kamloops, B.C., via Williams Lake.

*International Service (North Pacific).*—This service operates weekly from Vancouver, B.C., to Tokyo, Japan, and Hong Kong via the Great Circle route through Anchorage, Alaska, and Shemya in the Aleutian Islands.

Traffic has been consistently heavy from West to East with little passenger travel toward China.

Statistics to Mar. 31, 1950—six months operation—show that 383,246 revenue miles were flown and 873 revenue passengers carried 4,937,378 passenger-miles. Goods carried amounted to 34,152 ton-miles and mail 17,642 ton-miles.

*International Service (South Pacific).*—Traffic on this Service has shown a rapid increase and substantial loads are being carried both southbound and northbound. Up to the end of March, 1950—slightly over eight months of operation—332,551 revenue miles were flown and 819 revenue passengers were carried, a total of 4,614,598 passenger-miles. Cargo was very light, only 1,801 ton-miles being carried, while mail amounted to 3,422 ton-miles.

**Independent Air Lines.**—In addition to Trans-Canada Air Lines and Canadian Pacific Air Lines, there are eight other domestic air lines licensed to operate scheduled services in Canada. These are:—

- Central Northern Airways, Limited, Winnipeg, Man.
- Leavens Bros. Air Services, Limited, Toronto, Ont.
- Maritime Central Airways, Limited, Charlottetown, P.E.I.
- Mont Laurier Aviation Company, Limited, Saint Jean de Brébeuf, Que.
- Queen Charlotte Airlines, Limited, Vancouver, B.C.
- Rimouski Air Lines, Limited, Mont Joli, Que.
- Wheeler Air Lines, Limited, St. Jovite, Que.
- Quebec Airways, Limited, Montreal, Que.

The number of operating certificates in effect are: 57 scheduled; 305 non-scheduled, other than flying training; and 123 flying training.

Non-scheduled services are operated by the majority of the independent air lines. These services provide effective means of access to sections of Canada that are inaccessible by other means of transportation, and act as feeders to the scheduled air lines. They also provide specialty services such as recreational flying, aerial photography and survey, aerial pest control, and aerial advertising.

**Commonwealth and Foreign Scheduled Services.**—In 1949 there were 14 operating certificates issued to Commonwealth and foreign scheduled services flying into Canada:—

- Northwest Airlines Inc.*:—Operating between Winnipeg, Canada, and Fargo, N.D., U.S.A.; and between Minneapolis/St. Paul, U.S.A., Edmonton, Canada; Anchorage, Alaska; and beyond.
- Pan American World Airways Inc.*:—Operating between Seattle, U.S.A., and Fairbanks, Alaska, via Juneau, Alaska, and Whitehorse, Y.T., with a refuelling stop at Port Hardy, B.C., and/or Comox, B.C.; and between New York, U.S.A., and London, England, and points beyond, via Boston, U.S.A.; Gander, Canada and Shannon, Ireland.
- Sabena (The Société Anonyme Belge d'Exploitation de la Navigation Aérienne)*:—Operating between Brussels, Belgium, and New York, U.S.A., via Shannon, Ireland, and Gander, Canada.
- Scandinavian Airlines System*:—Operating between Stockholm, Sweden; Oslo, Norway; Copenhagen, Denmark; Prestwick, Scotland; Gander, Canada; and New York, U.S.A.
- T.W.A. (Transcontinental and Western Air, Inc.)*:—Operating between New York, Washington, Philadelphia, Boston, U.S.A.; Gander, Canada; The Azores; Shannon, Ireland; Paris, France; and beyond.
- United Air Lines, Inc.*:—Operating between Vancouver and Seattle via Bellingham.
- Western Air Lines, Inc.*:—Operating between Great Falls and Cut Bank, U.S.A., and Lethbridge and Edmonton, Canada; via Calgary and Penhold, Canada.
- American Airlines, Inc.*:—Operating between Toronto, Canada, and Buffalo, U.S.A. and Buffalo, U.S.A., Windsor, Canada, and Detroit, U.S.A.
- American Overseas Airlines, Inc.*:—Operating between New York, Washington, Philadelphia, Boston, U.S.A.; Gander, Canada; Reykjavik, Iceland; Shannon, Ireland; and points beyond.

*British Commonwealth Pacific Airlines, Ltd.*:—The Canadian portion of the route operating between San Francisco, U.S.A., and Vancouver, Canada, of the Trans-Pacific Service between Sydney, N.S.W., Australia, and/or Auckland, New Zealand, and Vancouver, Canada.

*British Overseas Airways Corp.*:—Operating between London, England, and Montreal, Canada, and between London, England, and New York, U.S.A., both routes via Prestwick, Scotland, or Shannon, Ireland, and Gander, Canada.

*Colonial Airlines, Inc.*:—(a) Operating between the terminals Ottawa and Montreal, Canada, and New York, U.S.A., via Burlington or Massena, U.S.A.; and (b) between the terminals Montreal and Ottawa, Canada, and Washington, U.S.A., via Massena, U.S.A.

*K.L.M. Royal Dutch Airlines*:—The Canadian portion of the route between the terminals Amsterdam, The Netherlands, and Montreal, Canada; and the Canadian portion of the route between the terminals Montreal, Canada, and Willemstad, Curaçao, North West Indies.

*Northeast Airlines, Inc.*:—Operating between Montreal, Canada, and Boston, U.S.A.

### Section 3.—Civil Aviation Statistics

**Aircraft.**—The Canadian aircraft industry on Mar. 31, 1949, consisted of the following companies making the civilian type of aircraft named:—

Canadair Limited, Montreal, Que., manufacturers of the *North Star*, *Canadair Four* and the converted *Canadair Dakota*;

Canadian Car and Foundry Company, Limited, Montreal, Que., manufacturers of the *Norseman*;

DeHavilland Aircraft of Canada, Limited, Toronto, Ont., manufacturers of the *Beaver*, *Chipmunk* and *Canso*;

Fairey Aviation Company of Canada, Limited, Eastern Passage, N.S., conversion of trainer aircraft;

MacDonald Bros. Aircraft, Limited, Winnipeg, Man., overhaul and conversion work;

Northwest Industries, Limited, Edmonton, Alta., overhaul and conversion work;

A. V. Roe Canada, Limited, Toronto, Ont., engaged in the design and construction of a jet-powered transport for inter-city operations, the *AVRO Jetliner*;

British Aeroplane Engines, Limited, Vancouver, B.C., overhaul work;

Canadian Pratt and Whitney Aircraft Company, Limited, Longueuil, Que., overhaul and maintenance work;

Canadian Wright, Limited, Montreal, Que., overhaul and testing.

The principal statistics of the aircraft industry are shown for the latest available year (1947) in the Manufactures Chapter, p. 591.

**Ground Facilities.**—Early ground facilities for civil aviation consisted chiefly of municipal or flying-club airports adjacent to the larger urban centres and of numerous terminals from which commercial flying services operated, mainly into the northern mining regions. These airports formed the nucleus which, with many additions and improvements, became the chain of airports constituting the Trans-Canada airways operated by the Department of Transport. To-day, Canada is well supplied with airports and aerodromes scattered throughout the country. The Department of Transport retained a certain number of the airports that had been constructed for war purposes and others were made available to municipalities for local use. The airports, airfields and anchorages in Canada are classified as in Table 3; and a statement is given showing the number of airports and airfields equipped with control facilities and certain other facilities, by provinces.

## 3.—Airports, Airfields and Anchorages, by Provinces, as at Mar. 31, 1950

NOTE.—Department of Transport figures: unlicensed airfields and anchorages not included.

<sup>1</sup> Includes 1 airport (water) of the Department of Transport.

*Air Traffic Control.*—The system of air traffic control established in Canada operates in accordance with standard international procedures and practices. This system is designed to expedite the flow of air traffic, to eliminate delays and traffic conflicts, and to provide separation between aircraft flying under weather conditions which necessitate the use of flight instruments.

Air traffic control centres are located at Moncton, N.B., Montreal, Que., Toronto, Ont., Winnipeg, Man., Edmonton, Alta. and Vancouver, B.C. At Moncton two such centres are in operation, one for the control of domestic traffic and the other for the control of northwest Atlantic oceanic air traffic. All these centres are linked by a network of longline telephone and teletype facilities and, in addition, each centre is similarly connected to all the airport traffic-control towers, aeronautical radio stations, meteorological stations and air-carrier despatch offices

which are located within its assigned control area. Airport traffic-control towers are operated by the Department at Moncton, N.B., Montreal and Cartierville, Que., Windsor, London, Toronto, North Bay and Ottawa, Ont., Winnipeg, Man., Regina, Sask., Edmonton, Lethbridge and Calgary, Alta., and Patricia Bay and Vancouver, B.C. These units are responsible for controlling, by means of radio and light signals, the air traffic within a radius of five miles of the airport concerned and for the orderly movement of traffic on the airport.

**Summary of Operation Statistics.**—The statistics given in Table 4 show the increase in recent years in passenger and freight traffic.

#### 4.—Summary Statistics of Civil Aviation, 1943-48

NOTE.—Figures for 1921 and subsequent years will be found in the corresponding tables of previous Year Books beginning with the 1924 edition.

<sup>1</sup> Property constructed at Montreal (Dorval), Que., to Feb. 15, 1946, and North Bay, Ont., to Dec. 31, 1945, acquired by Federal Government under agreements of June 24, 1943, and June 5, 1944, respectively.

<sup>2</sup> The above does not include expenditures for construction and development of airways and airports from unemployment relief appropriations to the extent of \$3,811,164 made by Department of National Defence prior to establishment of Department of Transport in 1936, nor grants to municipalities to assist in development of airways and airports to the extent of \$3,707,311, nor expenditures made by Department of National Defence (Air) or other Federal Government Departments. There was also a payment of \$87,100,814 covering acquisition of United States Air (War) and other war installations in Canada and Labrador.

### 7.—Operation and Maintenance Expenditures and Revenues of the Department of Transport in connection with Civil Aviation, Years Ended Mar. 31, 1947-49

## PART VI.—WIRE COMMUNICATIONS\*

## Section 1.—Telegraphs

The early history of telegraphic communication in Canada is given at p. 778 of the 1934-35 Year Book.

**Federal Government Telegraph and Telephone Service.**†—The function of the Telegraph and Telephone Branch of the Department of Transport is to furnish wire communications for outlying and sparsely settled districts where commercial companies do not enter into the field and where the population must receive adequate communication services in the public interest. These services include: telegraph and telephone services to scattered settlements along the coast of Cape Breton Island; cable services to Campobello, Grand Manan and other islands in the Bay of Fundy, to Prince Edward Island and a number of small islands in the Gulf of St. Lawrence; cable connections with Pelee and Manitoulin Islands in Ontario as well as telephone lines on the latter; some lines to northern outlying districts in Saskatchewan; telegraph lines from Edmonton to the Athabaska and Peace River country in Alberta in addition to an extensive telephone system in the latter area; telegraph and telephone communications around the coast of Vancouver Island, B.C., and adjacent islands; service to fishing, lumber and mining centres in the interior; and an overland telegraph and telephone line serving communities from Ashcroft, B.C., to Dawson, Yukon.

**Telegraph Systems.**—The Canadian telegraph systems are composed of lines owned by the Federal Government and by chartered railway and telegraph companies. The Canadian facilities, in proportion to population, are among the most extensive in the world, and are operated under great climatic and geographical difficulties.

\* Except where otherwise noted, this Part has been revised in the Finance and Transportation Division, Dominion Bureau of Statistics. The Division issues annual reports dealing with telegraph and telephone statistics.

† Revised by G. C. W. Browne, Controller of Radio, Radio Division, Department of Transport.

## 1.—Summary Statistics of Canadian Telegraphs, 1940-49

NOTE.—Figures for 1920-39 will be found in the corresponding tables of previous Year Books beginning with the 1938 edition.

Year	Gross Revenue	Operating Expenses	Net Operating Revenue	Pole-Line Mileage	Wire Mileage	Employees <sup>1</sup>	Offices	Messages Land <sup>2</sup>	Cable-grams and Marconi-grams <sup>3</sup>	Money Transferred

1949...	22,256,557	22,062,943	193,614	52,535	413,759	9,555	5,288	20,063,078	1,642,278	12,469,348

<sup>1</sup> Excludes commission operators.

<sup>2</sup> Includes messages to and from vessels on the Great Lakes

and the St. Lawrence River and messages to and from stations.

<sup>3</sup> Excludes messages relayed and includes paid wireless messages to and from ships in the Gulf of St. Lawrence and on the Atlantic Ocean.

**Submarine Cables.**—Three cable companies operate submarine cables landing in Canada: Cable and Wireless, Limited; the Commercial Cable Company; and the Western Union Telegraph Company. These companies operate to stations in the United Kingdom, the United States, Bermuda, Australia and New Zealand. The number of cables operating between connected stations and the length of cables are given in the following table.

## Section 2.—Telephones

A brief historical account of the early development of telephones in Canada is given at p. 781 of the 1934-35 Year Book.

**Telephone Systems.**—The 2,992 telephone systems existing in 1948 included the three large provincial systems in Manitoba, Saskatchewan and Alberta, and smaller governmental systems in Ontario, Quebec and New Brunswick, together with the system operated by the Federal Department of Public Works and the National Parks of Canada, Department of Resources and Development. They also included 24 municipal systems, the largest of which were operated by the cities of Edmonton, Fort William and Port Arthur. Of the 2,278 co-operative telephone companies 1,047 were in Saskatchewan, 779 were in Alberta and 216 in Nova Scotia. The largest among the 487 stock companies operating telephone systems in 1948 were the Bell Telephone Company and the British Columbia Telephone Company. Over 64 p.c. of the total telephone investment in Canada belongs to the Bell Telephone Company, and their telephones in Quebec and Ontario constitute 59 p.c. of the total number for Canada.

**Telephone Equipment.**—During the years 1939-48 there was an increase of 1,054,596 in the number of telephones in use, representing an advance of 55 p.c. in telephones per 100 population.

Of the 2,451,868 telephones in Canada in 1948, 1,398,821 or 57 p.c. were operated from automatic switchboards. The remainder were operated from manual switchboards. Automatic switchboards have completely displaced manual switchboards in the principal cities of the Prairie Provinces and are displacing them in the other provinces as equipment becomes available.

### 3.—Mileages of Pole Line and Wire, and Telephones in Use, 1939-48

NOTE.—Figures for 1911-38 will be found in the corresponding tables of previous Year Books beginning with the 1935 Year Book.

Year	Sys- tems	Pole-Line Mileage	Mileage of Wire	Telephones in Use

<sup>1</sup>Includes telephones on rural exchange lines and urban exchange lines that have more than four parties.

The density of telephones in the different provinces is influenced by the urbanization of the population because the number of telephones used for business purposes is much greater in cities and towns than in rural areas.

## 4.—Telephones in Use, by Provinces, 1948

<sup>2</sup> Statistics of Bell Telephone Company

<sup>3</sup> Excludes employees and wages for rural systems.

**Telephone Calls.**—Table 7 is based on estimates made by systems operating almost 90 p.c. of all telephones in Canada. Actual count of calls on days of normal business was made and, after adjustment for incomplected calls, holidays, Sundays, etc., the average was multiplied by 365. The long-distance calls, in practically all cases, were the actual long-distance calls completed.

**7.—Local and Long-Distance Calls and Averages per Telephone and per Capita, 1939-48**

NOTE.—Figures for 1928-35 will be found at p. 718 of the 1939 Year Book and those for 1936-38 at p. 761 of the 1948-49 edition.

Year	Local Calls	Long-Distance Calls	Total Calls	Total Calls per Capita <sup>1</sup>	Averages per Telephone

<sup>1</sup> Per capita figures are based on official estimates of population given at p. 121.

## PART VII.—RADIO-COMMUNICATIONS

The Canada Year Book, 1945, at pp. 644-646, gives an outline of the development of administrative control over radio-communication in Canada. See also pp. 717 and 718 of this volume.

### Section 1.—Administration\*

The administration and regulation of radio-communication in Canada is carried out by the Radio Division of the Department of Transport. To a very large extent, the regulation of radio is made necessary by the great distances over which most radio waves are propagated, and the impossibility of confining them within national boundaries. Mobile stations, such as ships and aircraft, may move about in all parts of the world, and may create interference to radio services of other countries. For these reasons the regulation of radio-communication has been the subject of extensive international agreements. The extreme congestion of long-distance communication frequencies, and the uses of radio in connection with the safety of human life, make necessary both domestic and international regulation to ensure the most efficient utilization of the available frequencies.

When Newfoundland became a province of Canada, the aeronautical and marine radio facilities as well as the technical control of broadcasting stations in that Province were taken over by the Federal Department of Transport. In addition, the operation of Coast Stations at Battle Harbour, Cartwright, Comfort Bight, Hawkes Harbour, Hopedale and St. John's was incorporated in the contract previously entered into between the Department of Transport and the Canadian Marconi Company, whereby the Company maintains and operates the stations on behalf of the Department.

\* Revised by the Department of Transport.

Numerous small radio-communication stations giving radiotelegraph and radio-telephone service to scattered settlements along the coast of Newfoundland, previously owned and operated by the Newfoundland Department of Posts and Telegraphs are now administered by the Department of Transport, but their operation was taken over by the Canadian National Telegraph which assumed responsibility for the elaborate network of telegraph and telephone communication in the new Province.

The principal international radio agreements and Canadian radio legislation can be grouped as follows:—

- (1) The International Telecommunication Convention and Regulations annexed thereto. The international obligations arising from this treaty are incorporated into the Radio Act of 1938, which also contains radio regulations of a purely domestic nature.
- (2) The International Convention for the Safety of Life at Sea, the obligations of which are enforced through the Canada Shipping Act, which also includes additional domestic requirements. These instruments also cover ship construction and other aspects of marine safety, which are administered by other Divisions of the Department of Transport.
- (3) The North American Regional Broadcasting Agreement and the Canadian Broadcasting Act, 1936.
- (4) The Inter-American Radio Agreement.

**International and Commonwealth Conferences.**—During the year ended Mar. 31, 1950, many international telecommunication conferences were held. A number of these arose from the decision made at the Atlantic City Radio Conference, 1947, to undertake the international reorganization of radio high-frequency assignments of the world, in an effort to reduce congestion and interference in the high-frequency portion of the radio spectrum.

The Provisional Frequency Board, which is charged with the task of engineering that part of the new Frequency List relating to fixed and Maritime mobile services, began its work at Geneva, Switzerland, Jan. 15, 1948, and continued until Feb. 28, 1950. The importance of the technical matters involved necessitated representation throughout the course of the work by an officer of the Radio Division, Department of Transport, acting as the Canadian member on the Board, assisted by representatives of the Armed Services as technical advisers.

On Apr. 25, 1949, a joint International Telecommunication Union Region 2 and Fourth Inter-American Radio Conference convened at Washington, D.C. This Conference was preceded by a meeting of aeronautical communication experts to prepare data for consideration by the Conference. Three documents were signed at the close of this Conference on July 9, 1949, namely, the International Telecommunication Union Region 2 Resolutions and Recommendations, the Inter-American Radio Agreement and the Report to the International Administrative Aeronautical Radio Conference, Second Session. The last named contained a draft frequency allotment plan for the aeronautical mobile service in the Western Hemisphere.

The International Administrative Aeronautical Radio Conference reconvened at Geneva, Aug. 1, 1949, and concluded Oct. 14, 1949, a majority Agreement being reached on a basic frequency allotment plan for the aeronautical mobile service including international, regional and national air routes. Under this Agreement detailed frequency assignments to regional and national air routes are to be determined at regional implementation meetings.

Canada is one of 18 countries on the Administrative Council of the International Telecommunication Union. This Council normally meets once a year to direct the administrative affairs of the Union and was in session for the period Aug. 15 to Oct. 3, 1949.

The International High Frequency Broadcasting Conference, Mexico City, Mexico, which commenced Oct. 22, 1948, concluded on Apr. 10, 1949, after agreement being reached by the majority of countries participating on a basic channel hour assignment plan for the high-frequency broadcasting services of the world. This Conference established a Technical Plan Committee to meet in France with the task of preparing detailed assignment plans for selected periods of solar activity. The Technical Plan Committee met at Paris, France, from June 15 to Dec. 5, 1949, and reconvened at Florence, Italy, Mar. 1, 1950, to assemble material, for consideration by the second session of the International High Frequency Broadcasting Conference, scheduled to convene at Florence, Apr. 1, 1950.

Meetings of the Commonwealth Communications Council were held at London, England, from Apr. 21 to May 10; on Aug. 15 and 16, 1949; and from Feb. 14 to Feb. 24, 1950, at which the question of financing the common user costs of the Commonwealth telecommunications system and related problems were discussed. At the February meeting a suggested financial arrangement submitted by Canada to the Council was recommended for acceptance by the Partner Governments of the Commonwealth. During the year the name of the Council was changed to "Commonwealth Telecommunications Board".

The International Telegraph and Telephone Conference met at Paris, France, from May 18 to Aug. 5, 1949. The Telegraph and Telephone Regulations, Cairo, Egypt, 1938, annexed to the International Telecommunication Convention, Madrid, Spain, 1932, were revised under the provisions of the Atlantic City Convention, 1947. These revised Regulations are known as the "Paris Revision annexed to the International Telecommunication Convention, Atlantic City, U.S.A., 1947". Canada has ratified the Telegraph Regulations.

Following the Paris Conference a meeting was held at London from Aug. 8 to 12, 1949, between representatives of the Governments of the British Commonwealth and the Government of the United States to revise the Telecommunications Agreement signed at Bermuda, in December, 1945.

A plenipotentiary Conference under the title "The Third North American Regional Broadcasting Conference" was convened at Montreal, Canada, on Sept. 13, 1949, for the purpose of drawing up a new North American Regional Broadcasting Agreement.

The first Agreement that resulted from the First North American Regional Broadcasting Conference at Havana, Cuba, in 1937, had been extended by the *modus vivendi* of 1946, resulting from deliberations of the Second North American Broadcasting Conference at Washington, D.C. The *modus vivendi* expired on Mar. 30, 1949, and, although the Conference had been planned for the autumn of 1948, some of the participating countries were not prepared to attend and the meeting was therefore delayed.

The Conference at Montreal, Que., was attended by representatives from Cuba, Dominican Republic, the Colonial Office of the United Kingdom representing the Bahamas, the United States of America and Canada. Mexico, for domestic reasons,

did not participate. The tremendous growth in broadcasting since 1937 had altered the viewpoint of some of the countries concerned to such an extent that they were anxious to obtain major revisions to the Convention. Much scientific knowledge pertaining to radio propagation, interference, etc., had been amassed during the War and the examination of the proposals before the Conference on these bases represented a major undertaking. Since technical agreement apparently could not be reached between Cuba and the United States of America, the Conference, by mutual agreement, was adjourned until later in 1950 to give the United States and Cuba an opportunity to meet bilaterally for the purpose of reconciling their differences.

**Technical Control and Licensing of Broadcasting Stations.**—Under the Broadcasting Act, 1936, applications for licences to establish broadcasting stations, or for modification of existing stations, are referred to the Canadian Broadcasting Corporation for its recommendations to the Minister, before being dealt with by the Department of Transport. As the licensing authority, the Canadian Broadcasting Corporation also controls the linking up of stations to form networks and, in addition, the character of programs being broadcast. With these exceptions, the control of broadcasting stations is carried out by the Radio Division of the Department of Transport in the same way as in the case of other types of radio-communication stations. The standard broadcast band is crowded with stations which, particularly at night, are capable of interfering with each other over the entire North American region. To utilize the band most effectively, and to reduce interference as much as possible, Cuba, the Dominican Republic, Haiti, the Bahama Islands, Mexico, the United States and Canada made extensive engineering studies of how to accommodate the largest number of stations with the least interference. The resulting plan is embodied in the North American Regional Broadcasting Agreement. Before an additional new standard broadcasting station can be licensed, a professional consulting radio engineer recognized by the Department of Transport must make a study of the matter to select the frequency, the amount of power and, commonly, a directional antenna system and, by calculation, establish the fact that interference to existing stations is within the requirements of the North American Regional Broadcasting Agreement. This engineering brief is checked and modified, if necessary, by the Radio Division. After a new station is completed measurements must be made and proof of performance submitted to establish that the actual installation is in accordance with the approved plan.

Another important measure to reduce interference is to ensure that each station is maintained exactly on the frequency assigned to it: this reduces considerably the amount of heterodyning, which causes interference in the form of a whistling note. The five frequency measuring stations maintained by the Radio Division make frequent measurements of the frequency of broadcasting and other stations, and ensure that all stations maintain their frequency within the narrow limits required.

The classes of radio stations listed in Table 1 are numerous and complicated by the fact that many perform closely related functions. At the end of the fiscal year, Mar. 31, 1950, 2,193,459 radio stations were operating in Canada; of these, 289 were Department of Transport stations. The summary of licensed services given on pp. 800 to 802 groups together licensed radio stations performing important related services.

## 1.—Radio Stations in Operation, by Class, as at Mar. 31, 1950

Class	No.	Class	No.

**Control and Licensing of Marine and Aeronautical Radio.**—Under the Safety of Life at Sea Convention and the Canada Shipping Act, most passenger ships and larger cargo ships must be fitted with radiotelegraph equipment, primarily for use in cases of distress. This requirement includes certain standards that the equipment must meet to fulfil the purposes for which it is fitted, as well as standards of proficiency of operating personnel. Type approval is given for each make and model of equipment which comes up to the required standard and, in addition, the ship station as a whole is inspected before the licence is issued and periodically thereafter. Foreign ships are subject to inspection before sailing from Canadian ports to ensure that they conform with the requirements of the Safety of Life at Sea Convention. Approximately 3,300 ships are inspected annually.

Analogous inspections of aircraft radio stations are carried out and about 310 such stations were inspected in 1949.

Standards are provided specifying in detail the requirements to be met to ensure an airworthy installation. These requirements are contained in Radio Division Circular C.R. 1, copies of which can be obtained from any Departmental Radio Inspector.

A 'type certificate' of airworthiness is granted to manufacturers for each type (model) aircraft radio equipment that has been demonstrated to meet the requirements. These requirements are contained in Circular C.R. 2, "Requirements for Type Certificate of Airworthiness for Aircraft Radio Equipment". Only type-certificated equipment is accepted for use on scheduled airlines and, while other equipment may be acceptable in other aircraft upon inspection at the time of

installation, the purchaser of type-certificated equipment is assured that it will meet all requirements. Each piece of type-certificated equipment is accompanied by an inspection release certificate, stating that the equipment is in good order and conforms to the approved type.

**Technical Control of Licensing.**—*General.*—In all branches of radio, basic control is exercised over the following principal matters: the right to establish a station, assignment of frequencies, operator standards, operating procedure, and general regulations concerning the manner in which radio stations are used.

The efficient utilization as well as the allocation of high frequencies requires reasonably accurate information on the transmission properties of the ionosphere, these vary with the season, the sunspot cycle and other factors. This information is obtained from daily measurements of the ionosphere made at about 70 points throughout the world. These data are combined and analysed and forecasts produced for coming months. Aspects of special interest to Canada are treated by the Canadian Radio Wave Propagation Committee but general frequency forecasts made by the United States Central Radio Propagation Laboratories are available to Canada. These are based on world-wide data, including those obtained from the five ionosphere measurement stations operated by the Radio Division at Clyde River, Baffin Island; St. John's, Nfld.; Resolute Bay, Cornwallis Island; Baker Lake, N.W.T.; and Fort Chimo, Que.

Operator standards and related regulations are covered principally by international agreement, and arise partly from the uses of radio in connection with the safety of life, and also in the interests of reducing interference and making the most effective use of the radio spectrum.

In addition, operators of radio equipment are examined for certificates of proficiency in radio in accordance with the Radio Regulations annexed to the International Telecommunication Convention (Atlantic City, 1947).

The most important services call for operators holding first, second or other prescribed class of certificate of proficiency. Qualified operators are essential particularly in the case of ships and aircraft stations in the interests of safety of life. Operators for services of lesser importance, or services not likely to become a source of interference, are required to satisfy the Department of Transport that they are fully qualified to operate and maintain the equipment upon which they are employed.

At Mar. 31, 1950, the total number of certificates issued was 18,500, not all of which were still valid. In the commercial classes, certificates must be brought up to date from time to time by exchange or by re-examination, and in a number of cases operators had allowed their certificates to lapse.

**Summary of Principal Licensed Services.**—The Canadian Marconi Company is licensed to operate a public commercial station with the transmitter at Drummondville, Que., and receiver at Yamachiche, Que., for the purpose of communicating with a similar station located at St. John's, Nfld., thus providing a direct radio-telephone circuit between Newfoundland and the mainland.

*Commercial Transoceanic Radiotelegraph and Radiotelephone Service.*—The Canadian Marconi Company is licensed to operate a long-distance beam radiotelegraph service from its Montreal (Drummondville) Que., station to the United Kingdom, Australia, Bermuda and Jamaica and a radiotelephone service from Montreal to Great Britain.

*Commercial Point-to-Point Radiotelephone Services.*—The North-West Telephone Company operates a radiotelephone service between points in British Columbia, not hitherto served by telephone communications. Such stations, used in conjunction with the ordinary telephone exchange, provide a duplex radiotelephone service to 191 isolated points and to certain ships at sea.

*The Quebec Telephone and Power Company.*—On the south shore of the St. Lawrence, this Company operates a radiotelephone station at Rimouski, Que., which links up with the Bell Telephone Company at that place and with a radiotelephone station at Baie Comeau, Que.; telephone service from that area is provided to any part of Canada.

*Canadian Pacific Air Lines, Limited.*—This organization operates a public commercial radiotelephone service consisting of public commercial radiotelephone stations located at Sioux Lookout and Pickle Lake areas in Ontario, which are used in conjunction with the ordinary telephone exchanges to provide telephonic communication to privately owned stations located at isolated points.

*Norwesto Communications, Limited.*—Norwesto Communications, Limited, operates a public commercial radiotelephone service consisting of stations located at Kenora, Red Lake and Ball Lake, Ont., which are used in conjunction with the ordinary telephone exchanges to provide telephone communication to privately owned stations at isolated points throughout the northwestern part of Ontario.

*Provincial Government Services.*—Provincial authorities use radio in forestry work and operate stations as follows: Newfoundland 3; Nova Scotia 7; New Brunswick 4; Quebec 96; Ontario 308 (including 41 aircraft stations); Manitoba 47 (including 8 aircraft stations); Saskatchewan 184 (including 18 aircraft stations); Alberta 158; and British Columbia 427 (including 27 patrol vessels, 3 Game Commission vessels and 1 Game Commission fixed station). The British Columbia Department of Public Works operates 7 private commercial stations (including 1 aircraft station). The Alberta Department of Railways and Telephones operates 16 stations. The Nova Scotia Department of Highways and Public Works operates 2 stations. The Saskatchewan Department of Public Health operates 7 aircraft stations. The Quebec Department of Mines operates 2 stations and the Quebec Streams Commission operates 3 stations.

*Police Radio Services.*—The Royal Canadian Mounted Police operates 78 radio stations at fixed points, 152 mobile stations, 32 portable stations, 7 aircraft stations, 20 ship stations and 300 commercial receiving stations throughout Canada. The British Columbia Provincial Police\* operates 34 fixed stations, 50 mobile stations, 7 portable stations, 6 commercial receiving stations, 1 aircraft station and 7 ship stations; the Ontario Provincial Police, 48 fixed stations and 365 mobile stations; the Quebec Provincial Police, 11 fixed stations and 24 mobile stations. All of these stations are used to provide liaison between the various units of the Force concerned.

Municipal police radio stations have also been licensed for the purpose of providing communication between various Provincial Police Headquarters and police radio-equipped automobiles in 123 municipalities throughout Canada.

\* In 1950 the British Columbia Provincial Police was taken over by the Royal Canadian Mounted Police.

*Public Utilities, Power and Other Companies.*—Radio is used by these bodies to provide emergency telegraph and telephone communication between their power plants and distribution centres, and 736 licences for such stations were issued during 1949, including 173 receiving stations in patrol cars.

Licences were also issued to mining companies throughout Canada to cover the operation of 165 radio stations and 37 aircraft radio stations.

Other companies operating aircraft were licensed for 855 ground radio stations and 905 aircraft radio stations (including 35 receiving stations installed in aircraft).

## Section 2.—Federal Government Radio Operations\*

**Operating Statistics.**—The International Telecommunication Convention and Regulations contain the international agreements concerning the rendering and settlement of international telecommunication accounts. The records for Canada are kept by the Radio Division of the Department of Transport.

\* Revised by the Department of Transport.

<sup>1</sup> Includes licences issued free, numbering 8,375 in 1945, 8,435 in 1946, 10,673 in 1947, 10,676 in 1948, 12,782 in 1949 and 15,810 in 1950. See Table 1 for classification for 1950.

**Investigation and Suppression of Inductive Interference.**—Under the Broadcasting Act the use of electrical equipment which will produce harmful interference to broadcast reception is not permitted. The Radio Division of the Department of Transport maintains 50 cars equipped for measuring and locating sources of interference to broadcast reception. In addition to locating the sources of interference, advice is given as to how it can be suppressed or eliminated. These cars operate from the permanent Radio Inspection Offices located in 25 cities throughout Canada.

### 4.—Investigations of Inductive Interference, Years Ended Mar. 31, 1947-50

Industrial, scientific and medical apparatus is brought under strict control, according to Regulations for Controlling Radio Interference and the authority of Section 23 of the Canadian Broadcasting Act, 1936. These regulations require that radiation from such apparatus, which is liable to cause interference to radiocommunications, must be suppressed, either by shielding or by replacing the apparatus with a non-interfering type. The Department of Transport conducts type-tests on diathermy and industrial heating apparatus submitted by manufacturers, and the types that fulfil the requirements of the Department are listed as non-interfering. The radiation from all such sources on communication frequencies must not exceed the tolerances specified by the Canadian Standards Association.

### Marine Radio Stations\*

**Marine.**—Four distinct networks of stations provide a complete radio aids-to-navigation service for ships. These networks serve the following areas: Great Lakes; Gulf of St. Lawrence and Atlantic coast; Hudson Bay and Strait, and Sub-Arctic; and Pacific coast. The first three networks are interlocking. The Department of Transport maintains communication between Ottawa and the east and west coasts, and Hudson Bay and Strait by means of high-frequency stations.

During the fiscal year 1949-50, Federal Government radiotelegraph stations on the east coast, west coast, the Great Lakes, and Hudson Bay and Strait handled 806,674 messages or 24,984,618 words.

**Radio Coast Stations.**—The primary purpose of the coast-station organization is to provide radiocommunication facilities whereby any ship within 500 miles of the Canadian coast may establish communication with shore.

Twenty-one stations on the east coast and the Hudson Bay and Strait, 7 stations on the Great Lakes, and 7 stations on the west coast, broadcast information to navigators twice daily at advertised hours. These stations are not necessarily classified as solely coastal stations. In addition, urgent information such as hurricane warnings, etc., is broadcast immediately upon receipt.

The Vancouver Coast Station (VAI) maintains long-range radiocommunication with ships of any nationality at sea. Halifax (CFH) and Vancouver (CKN) Coast Stations participate in the Commonwealth scheme for providing similar radiocommunication services with ships, and are operated jointly by the Department of Transport and the Royal Canadian Navy.

**Radio Direction Finding Service.**—There are 12 marine radio direction finding stations in operation—7 on the east coast, five on the Hudson Bay and Strait. These direction finding stations have an enviable reputation for efficiency and accuracy. During 1949-50, 20,105 bearings were given without charge to ships and aircraft.

**Radiobeacon Service.**—Radiobeacons are established for the purpose of enabling any ship or aircraft equipped with a direction finder to determine its bearing or direction in relation to the radiobeacon station. There are 52 radiobeacons in operation—26 on the east coast, 17 on the Great Lakes and 9 on the Pacific coast.

In clear weather each station, at hours advertised, transmits its characteristic for three periods of one minute separated by silent intervals of two minutes. In foggy weather all stations operate continuously, maintaining a uniform time cycle of three minutes, each station transmitting in its proper sequence for one minute separated by silent intervals of two minutes.

At Flat Point, N.S., Partridge Island, N.B., Red Islet, Que., Caribou Island, Gros Cap Lightship, Hope Island, Main Duck, Southeast Shoal, Cove Island, Burlington Bay, Michipicoten Harbour, Long Point, Ont., Amphitrite Point and Point Atkinson, B.C., the radiobeacon signals are synchronized with the emissions of the fog alarms at those points for distance finding during foggy weather.

\* Detailed information covering all marine radio aids to navigation is contained in the annual publication "Radio Aids to Marine Navigation". Copies of this publication may be obtained, upon request, from the Department of Transport, Ottawa, without charge, also any supplementary "Notices to Mariners" issued in connection therewith during the year.

Ships equipped with direction-finding apparatus may, upon request, obtain signals for the purpose of taking bearings from any of the coast stations. During 1949-50, 161 such requests for signals were handled.

"Loran" (long-range aid to navigation) is a system of position finding based on the difference in the time of arrival of pulse-type radio signals transmitted from a pair of stations. This time difference is measured on a Loran receiver and is used in conjunction with specially prepared charts or tables to establish a line of position. The intersection of two or more lines of position determined from two or more pairs of stations provides the required position.

There are four standard Loran stations in Canada located at Deming and Baccaro, N.S., and Spring Island, B.C., which operate in conjunction with Port aux Basques, Nfld., Siasconset, U.S.A., and Point Grenville, U.S.A., respectively.

**East Coast Visual Signal Service.**—The chief function of the visual signal stations on the east coast, located at strategic points, is to report the movements of vessels not equipped with radio. All radio coast stations report ships with which communication has been established, and this information is supplemented by reports of ships sighted by the visual signal stations which are organized to link up with the east coast radio service.

There are five visual signal stations on the east coast located at Point Tupper, Halifax, Camperdown, Saint John and Partridge Island. In addition, the Lurcher Lightship reports by radio to the nearest coast station all ships spoken and sighted.

**Time Signals.**—The Dominion Observatory of the Department of Mines and Technical Surveys at Ottawa operates a continuous time signal transmission over its radio station CHU on the frequencies of 3330, 7335 and 14,670 kc/s. The signals are transmitted continuously day and night and are of value to survey parties and prospectors in providing facilities for determining their exact geographical positions.

During 1949, three transmitters were purchased by the Dominion Observatory, and installed at the Ottawa short-wave transmitting station where they are maintained and operated by Radio Division personnel of the Department of Transport.

Time signals are relayed from the Dominion Observatory to Halifax, N.S., and Port Churchill, Man. The signals are transmitted by Halifax (Albro Lake) Coast Station (CFH) daily at 0300 G.M.T. simultaneously on 115 and 5,502.5 kc/s and at 1500 G.M.T. simultaneously on 115 and 9,040 kc/s; and by Port Churchill Coast Station (VAP) daily at 1500 G.M.T. on 500 kc/s.

Time signals are also relayed from the Saint John, N.B., Observatory to Camperdown Coast Station (VCS) and are transmitted by that station daily, except Sunday, at 1400 G.M.T. on 417 kc/s.

**Radar.**—A considerable number of merchant ships are now fitted with radar which, besides being a safety measure, reduces the operating costs of the ships by allowing them to proceed under conditions of low visibility. Experimental reflectors fitted on buoys along the east coast enable ships to detect the buoys on their radar at a much greater range.

The Department of Transport is co-operating with the National Research Council in the development of a shore-based radar aid to shipping for use at harbour entrances. The installations at Camperdown D.F. Station, at the entrance to Halifax Harbour, at the Lion's Gate Bridge, Vancouver, and at the entrance to Vancouver Harbour, are producing encouraging results.

**Medical Advice to Ships at Sea.**—Ships at sea may obtain medical advice through any of the Department of Transport coast stations. Messages from ships in this connection are forwarded to the nearest medical officer of the Department of National Health and Welfare and his reply is transmitted to the ship.

**Radio Assistance rendered to Vessels in Emergency.**—Federal Government radio stations rendered assistance to 90 ships and aircraft reported in danger or distress during the year ended Mar. 31, 1950.

**Marine Casualty Reporting Stations.**—To assist in promoting the safety of life at sea, 7 marine casualty reporting stations on the Atlantic coast and 9 on the Pacific coast are fitted with radiotelephony.

### **Radiocommunication Stations and Aids to Air Navigation**

Radio aids to air navigation are provided from coast to coast along the airways used by the many Canadian airlines, United States airlines flying over Canadian territory, and many Canadian and United States military aircraft. In order to construct and maintain these many facilities, trained engineers and technicians are located at 6 district offices; Moncton, N.B., Montreal, Que., Toronto, Ont., Winnipeg, Man., Edmonton, Alta., and Vancouver, B.C. The large communication stations at Gander are under the administration of the Moncton office.

**Radio Ranges.**—The principal aid to air navigation is the radio range. Such stations are located at approximately every 100 miles and provide radio beams which guide aircraft in flight. In addition to the course, pilots can be advised by radiotelephone from the ground station of weather conditions and other matters of interest to the pilot. There are now 91 such stations distributed from Vancouver Island, B.C., to Newfoundland: 51 are on simultaneous operation, a feature which enables voice communication between the ground station and the pilot without shutting off the beams.

**Fan Markers.**—This type of equipment is installed at various points along the airway to identify a particular spot on the ground to pilots. For instance, the Maple Ridge Fan Marker, 30 miles east of the Vancouver airport, informs the pilot on a west-bound flight when he may safely lose altitude without risk of striking mountain tops.

**Station Location Markers.**—Each radio range station is provided with a station location marker, the purpose of which is to inform a pilot flying overhead when he is directly above the station. This is accomplished by directing energy vertically from the ground in the form of an inverted cone which is received on the aircraft and causes a light on the instrument panel to be turned on. Only the ranges at Killaloe, Ont., and Mecatina, Que., remain to be equipped.

**Instrument Landing Systems.**—Instrument landing equipment provides radio beams, by means of which pilots are able to land aircraft during periods of very low visibility. An installation consists of a localizer which provides a beam down the centre of the runway, a glide path transmitter which provides an inclined beam which meets the runway at the approach end, two markers at four miles and 3,500 ft., respectively, from the approach end of the runway which indicate to the pilot, by means of lights on his instrument panel, the exact distance he is from the runway and a compass locator station to assist in holding procedures and in tracking the localizer course. This latter equipment operates on medium frequencies and provides a signal which operates the airborne automatic direction finders.

**Very High Frequency (VHF) Program.**—Due to the overcrowded condition of the high frequency band and the fact that communication in the very high frequency spectrum is relatively free from static interference, progress is rapidly being made in providing communication between the ground and aircraft on the latter frequencies. The greatest drawback to the VHF spectrum is that communication is restricted to line of sight, thus making necessary more frequent installations than are required in the HF band.

Very high frequency transmitting and receiving facilities for the frequency 126.18 Mc/s were installed at range stations and towers during the year. There are now 69 installations on this frequency.

**Meteorological Communications Stations.**—Weather reporting stations are distributed at strategic points throughout the uninhabited areas of the country as well as throughout the populated areas. Reports from these stations enable the weather forecasters to make more accurate forecasts of great importance to both domestic and transatlantic flying operations.

Four meteorological radio stations located at Fort MacKenzie, Que., Nitechuon, Que.; Dore Lake, Que., and Dease Lake, B.C., were maintained and operated throughout 1949 and during the year the station at Indian House Lake was taken over from the United States Air Force. The purpose of these stations is to forward to the meteorological office the weather observations taken at the above points. The Meteorological Station at Port Harrison, Que., performs similar functions and in addition provides a restricted coast station service during the season of navigation in Hudson Bay.

**Ionosphere Measurement Stations.**—The purpose of ionosphere measurements is to determine virtual height of the ionized layer in the earth's upper atmosphere and to determine the amount of absorption which radio waves experience in passing through and in being reflected by this layer. The information gained is of great importance in predicting short-wave communication coverage and in determining the reliability and deviation of bearings from short-wave direction finders. There are approximately 70 ionosphere measurement stations located in different parts of the world. Five new ionosphere measurement stations at Ottawa, Ont., Churchill, Man., Portage La Prairie, Man., The Pas, Man., and at Prince Rupert, B.C., were established and placed in operation during 1949-50. In addition, stations are maintained at Clyde River, Baffin Island; St. John's, Nfld.; Resolute Bay, Cornwallis Island and Baker Lake, N.W.T.; and at Fort Chimo, Que.

#### **Other Federal Government Radio Stations**

**Department of National Defence.**—In addition to stations established for military purposes, Militia Services (Royal Canadian Corps of Signals) operates 11 permanent stations and two summer stations situated along the Mackenzie River and in Yukon on behalf of the Department of Mines and Technical Surveys.

**Department of Public Works.**—The Chief Engineers' Branch of the Department of Public Works operates 2 stations.

**Department of Mines and Technical Surveys.**—The Mines, Forests and Scientific Services of this Department operate 1 fixed station, 35 portable stations, 6 experimental stations and 1 commercial receiving station. These stations are used to provide communication and time signal service for survey parties and for the protection and administration of National Parks.

**Department of Agriculture.**—Four fixed stations are operated by the Department of Agriculture.

**Department of Citizenship and Immigration.**—The Indian Affairs Division of the Department has 2 stations.

**Department of National Health and Welfare.**—This Department operates 4 fixed stations.

**Department of National Revenue.**—One fixed station is operated by the Excise Division of the Department of National Revenue.

**National Research Council.**—Three fixed stations, 2 portable and 17 experimental stations are operated by the National Research Council.

**Department of Resources and Development.**—This Department has 13 fixed stations and 54 portable stations.

### **Section 3.—The Canadian Broadcasting Corporation\***

The history and development of the Canadian Broadcasting Corporation is given at pp. 737-740 of the 1947 Year Book.

The Canadian Broadcasting Corporation operates under authority of the Canadian Broadcasting Act, 1936, and is headed by a Board of nine Governors, chosen to give representation to the principal geographic divisions of Canada, and a full-time Chairman. The Board determines and supervises policy, but day-to-day operations and executive direction are the responsibility of the General Manager. The organization of the CBC consists of the following Divisions: Executive, Personnel and Administration, Finance, Engineering, Program, Press and Information, Commercial, Broadcast Regulations, and Station Relations.

Under the Canadian Broadcasting Act, 1936, the CBC is responsible for regulations controlling the establishment and operation of networks, the character of any and all programs broadcast over its own and privately owned stations, the proportion of time that may be devoted to advertising in broadcast programs. The CBC neither exercises, nor authorizes any private station to exercise on its behalf, censorship of any broadcast program. The responsibility of seeing that the regulations are observed rests with the individual station management.

**Frequency Modulation.**—The development of frequency modulation is given at p. 773 of the 1948-49 Year Book. On Apr. 1, 1950, there were 5 CBC and 31 privately owned frequency modulation stations in operation.

**Television.**—In April, 1949, the Government of Canada adopted an interim plan for the development of television in Canada that, in accordance with the Canadian Broadcasting Act, 1936, entrusted the general direction of television broadcasting in Canada to the CBC Board of Governors who will arrange for television operations by the Corporation.

During 1949-50, TV channels were assigned to the Canadian Broadcasting Corporation for its proposed television operations at Toronto, Ont., and Montreal, Que. Frequency channels 2 and 5 were allocated to Montreal where the Corporation expects eventually to operate two outlets, one French and one English. The first to be used will be channel 2 operating from 54 to 60 Mc/s. Channel 5 will operate from 76 to 82 Mc/s. Channel 9, to be used at Toronto, will operate from 186 to 192 Mc/s.

\* Revised by Donald Manson, Assistant General Manager, Canadian Broadcasting Corporation, Ottawa.

In addition to these frequencies, the CBC will use microwave frequencies in still higher bands to enable it to establish direct links from studio to transmitter and from mobile units to studio or transmitter or both. Some of these will be in the 2,000 Mc/s band and others in the 7,000 Mc/s band.

The Toronto studios and transmitter building, topped by a 500-foot tower and antenna, will be built on CBC property at 354 Jarvis Street, Toronto. At Montreal, plans call for a high antenna tower on the top of Mount Royal. The transmitter building will be located at the base of the tower and programs will be carried from the television studios, to be built at the rear of the Radio Canada Building, to the transmitter by microwave link. Each building will house a 5 kw. transmitter.

Television studio equipment and two mobile television units for both Toronto and Montreal have been ordered from England. The studio equipment includes camera chains, control and test equipment, and accessories to equip two "live" program studios, one film projection unit, and a master control at each point. The mobile units are each equipped with three cameras, a low-powered microwave transmitter and associated receiver for relaying programs back to the main transmitters, and necessary auxiliary equipment. Delivery of this equipment is expected in the spring of 1951.

Present plans call for the completion of construction work in the summer of 1951, and regular television transmissions are expected to begin in the autumn of that year.

The Directors of Television, Technical Directors, Program Directors, and other key personnel have been appointed.

Preliminary research has been undertaken to determine the program service best suited to Canadian conditions and to discover the potential program sources. The patterns of United States, French and British TV experience have been compared evaluated and used as criteria for a Canadian television service.

**Broadcasting Facilities.**—Under Sect. 24 of the Canadian Broadcasting Act, the CBC is required to review all applications for licences for new stations, applications for increases in power, and changes in frequency or location. Two considerations are involved: (1) non-interference with the present and proposed facilities of the CBC, and (2) that high-power transmission facilities, on both long- and short-wave bands, are reserved for use by the CBC. Within these limitations, it is the policy of the Board to serve community interests by giving every practical encouragement and assistance to local stations.

The CBC operates three networks: the Trans-Canada and Dominion networks, serving English-language audiences from Atlantic to Pacific, and the French network, serving French-language listeners in Quebec. The Trans-Canada network is made up of 24 basic stations: 11 CBC-owned and 13 privately owned. There are 15 affiliated stations, four of which are CBC-owned Newfoundland stations. The Dominion network consists of 31 basic stations of which 30 are privately owned. Six affiliated privately owned stations receive Dominion network service. The French network has 3 basic CBC-owned stations, and 12 privately owned stations.

On Apr. 1, 1949, when Newfoundland became a province of Canada, the Trans-Canada network service was extended via a frequency modulation link and 541 miles of wireline. CBC-owned and operated stations were increased by four, and a new region was inaugurated utilizing Trans-Canada program service in conjunction with its own local community-service programs. In 1950 the

CBC had 19 stations, 8 of which had 50,000-watt transmitters. During 1950 CBC increased the power of CBM Montreal from 5,000 to 50,000 watts, and of CBR Vancouver from 5,000 to 10,000 watts; also a new 10,000-watt station, CBE, was established at Windsor, Ont. In order to present programs at suitable times, and to give expression to varying interests in the six regions, CBC maintains regional offices and production facilities at St. John's, Nfld.; Halifax, N.S.; Chicoutimi, Quebec City and Montreal, Que.; Ottawa and Toronto, Ont.; Winnipeg, Man.; Edmonton, Alta.; and Vancouver, B.C.

### 5.—Broadcasting Stations of CBC Networks, as at July 15, 1950

NOTE.—The stations marked with an asterisk (\*) are CBC-owned.

<sup>2</sup> 1,000 watts during daytime; 250 watts at night.

**CBC International Service (Shortwave).**—The International Service, inaugurated on Feb. 25, 1945, is operated by the Canadian Broadcasting Corporation on behalf of the Canadian Government. Its aim has been to tell the people of other countries about Canadian life and thought, and to add a friendly note to the conversation of nations.

During five years of operation, the International Service has grown to meet the requirements of Canada's expanding interest and influence abroad. Its two 50,000-watt transmitters at Sackville, N.B., are linked by approximately 600 miles of land lines with studio and program headquarters in the Radio Canada Building, Montreal, from which programs in 12 languages are broadcast daily. These languages are English, French, German, Czech, Slovak, Dutch, Swedish, Norwegian, Danish, Italian, Spanish and Portuguese. With technical facilities transmitting a signal unequalled by any other from the North American continent, the International Service has succeeded in reaching increasingly large audiences in Europe, Central and South America, the Caribbean, and the South Pacific area.

Over 150,000 letters have been received from listeners in all parts of the world attesting to the strength of the International Service signal and to a wide interest in Canada and Canadian programs. Many listeners request specific information on a variety of topics ranging from trade conditions to social and educational matters. These inquiries are answered by the language sections or are referred to the government departments directly concerned. Reception reports are also verified.

In addition to broadcasting Canadian programs approximately 14 hours daily, the International Service has developed a liaison with broadcasting organizations in other countries so that an increasing number of programs are relayed over national networks, thus reaching an even wider audience.

An important function of the International Service has been the coverage of United Nations activities. This is done by means of reports and interviews by the CBC correspondent at Lake Success and foreign language correspondents. The International Service also places its transmitters at the disposal of the United Nations Radio Division for the broadcasting of its official reports and commentaries to Europe and to the South Pacific.

Monthly illustrated program booklets designed for audiences in Europe and in Latin America are sent, upon request, by the International Service to listeners. These booklets contain broadcast schedules, program details in various languages, and frequency information.

**Domestic Program Service.**—During the year ended Mar. 31, 1949, 73,002 programs representing 23,076 hours of broadcasting were presented over the CBC Trans-Canada, Dominion and French networks. Of the total broadcasting hours, more than 81 p.c. were devoted to non-commercial and public service programs, and the remainder to commercial presentations. Of the total broadcasting hours in 1948-49, 68 p.c. was scheduled on the Trans-Canada network; the Dominion network released more than 9 p.c. and the remainder was released on the French network.

The CBC originated and produced 83 p.c. of its network broadcasts. Of the remainder 2 p.c. came from private stations and 15 p.c. were exchange programs from the United States and the British Broadcasting Corporation. Various categories of light music made up the greatest number of broadcast hours, followed in order by drama, news, talks, semi-classical music, variety, agriculture programs, educational broadcasts, religious periods, and programs devoted to the interests of women,

sports enthusiasts, and children. Table 6 shows the proportion of time devoted to sustaining programs as compared with commercial programs, and analyses those made up of music as compared with the spoken word.

### 6.—Classification of CBC Programs, Year Ended Mar. 31, 1949

**Finances of the CBC.**—The 13th Annual Balance Sheet disclosed a deficit of \$43,449 in operations for the fiscal year 1948-49 after providing for depreciation and obsolescence to the extent of \$196,843. Revenues increased over the preceding year but, comparatively, expenditures increased still more rapidly.

Licence fees increased by \$337,084 due mainly to the issuance of 113,772 additional private receiving licences as well as an amendment of Regulation 1, Section 14, of Part 1 of the Regulations made under the Radio Act of 1938 (Department of Transport, Radio Division) governing Private Commercial Broadcasting Stations, whereby the schedule of licence fees was increased based on the gross revenue of the licensee effective Apr. 1, 1948.

There was an increase of \$632,212 in fixed assets. During the year capital expenditures were made in connection with 3 new 50-kw. transmitters at Lacombe, Alta., Carman, Man., and Hornby, Ont. These, together with other improvements, amounted to approximately \$410,000.

All International Service capital and operating expenditures are recoverable from the Government of Canada. These expenditures are not considered chargeable to the Canadian Broadcasting Corporation because the licence fees collected are used only to serve listeners within Canada.

**Section 4.—Privately Owned Radio Broadcasting Stations\***

**Development.**—Privately owned (non-government) broadcasting stations began operations in the early 1920's, about 12 years before any other broadcasting service was available, and since then have offered regular broadcasting services to communities in every part of Canada. In 1949 these stations numbered 130 with a total wattage of 337,400. Operating mainly in conjunction with AM stations are 31 FM stations, with a combined power of 60,368 watts. There are, in addition, 8 short-wave stations with a combined power of 6,685 watts.

The privately owned stations serve, primarily, the localities in which they are situated, the community served varying with circumstances. Many such stations are located in very small urban centres where they serve not only the local population but also a larger population scattered throughout the surrounding rural areas. Others may serve a metropolitan area and cities adjacent to it, in addition to the rural audiences and smaller centres lying between or beyond the urban areas.

These privately owned stations have a combined capital investment estimated at about \$26,938,282, employ more than 3,700 persons and disburse in salaries and wages an estimated \$8,500,000 annually. Revenue is obtained entirely from com-

\*Revised by T. J. Allard, General Manager, Canadian Association of Broadcasters, Ottawa.

mercial advertising and they receive no part of the licence fee charged against operators of receiving sets. The privately owned stations are required to pay transmitter licence fees to the Canadian Broadcasting Corporation: these totalled approximately \$150,000 for 1949.

According to figures submitted by the Department of Transport to the Massey Commission in April, 1950, the privately owned stations showed a net profit of 9 p.c. in 1948, figured as a percentage of capital, as against 7 p.c. in 1947 and 8 p.c. in 1946. The 1948 profit, as a percentage of operating revenue, was 10 p.c., as against 8 p.c. in 1947 and 10 p.c. in 1946. These figures are based on reports required by the Department of Transport from 109 stations in 1948; 108 stations in 1947; and 88 stations in 1946. Thus, the average net profit per station was \$12,516 in 1948; \$8,597 in 1947; and \$11,228 in 1946.

Between 1947 and 1948 the privately owned stations increased their average gross revenue per station by 17 p.c. and the CBC increased its comparable revenue by 20 p.c. The average private station gross return in 1948 was \$130,909 and the CBC average per station gross return for the same year, from commercial revenue only, was \$147,808.

In 1946, of the 88 privately owned stations reporting, 64 stations showed an aggregate surplus and 24 an aggregate loss. Of the 109 stations reporting in 1948, 79 showed an aggregate surplus and 30 an aggregate loss.

**Administration.**—The independent stations operate under the Canadian Broadcasting Act, which is administered by the Canadian Broadcasting Corporation, and under regulations made by the CBC, in addition to the Radio Act and specifications laid down by the Department of Transport. Annual statements of "Proof of Performance", showing that public service obligations have been fulfilled, together with financial statements, must be filed with the licensing authority. Advance copies of programs scheduled must also be filed weekly with the CBC and a program log within seven days following operations. Advertising content of program is limited to 10 p.c. of program time.

**Broadcasting Facilities.**—Licences of the privately owned stations are granted upon recommendation of the Board of Governors of the Canadian Broadcasting Corporation by the Federal Government and are valid (unless cancelled or revoked) for a period of three years. Sale or ownership transfer of any station must be approved by the Federal Government.

The independent stations are limited to 5,000 watts. In 1948 three privately owned stations (CKAC, Montreal; CFRB, Toronto; and CKLW, Windsor) were authorized to operate on 50,000 watts. The majority still continue to serve on 1,000 to 5,000 watts on the shared channels, the CBC stations occupying the clear channels allocated to Canada and operating in the main on 50,000 watts.

**Network Operations.**—Network operation in Canada (the process of having two or more stations broadcasting the same program at the same time) is at present restricted to the CBC by its own regulations. The CBC also has sole right, except in the case of four stations, to bring commercial and other network programs in from the United States. Some privately owned stations do, however, serve as outlets, either basic or supplementary, for CBC network programs. All of these stations must

carry CBC or other programs when required to do so by the CBC. All food, drug and medicine continuity used on Canadian broadcasting stations must be approved in advance of broadcast by the Department of National Health and Welfare.

**Television.**—Several Canadian stations have applied for television licences, but to the end of 1950 no decision had been given on the applications.

## PART VIII.—THE POST OFFICE

The Canada Post Office Department was created at the time of Confederation in 1867 by the Canada Post Office Act to superintend and manage the postal service of Canada, under the direction of a Postmaster General. For almost a century previous to Confederation postal services in the Canadian provinces had been controlled by the British Postmasters General and administered by their deputies. Under the French regime a courier service had been organized as early as 1703 between Quebec, Three Rivers and Montreal, while in 1734 a post road was constructed over the same route and post houses, complete with post horses and vehicles, were established for use of travellers.

**Functions.**—The basic task of the Canadian Postal Service is the handling and transmission of postal matters—letters, parcels, newspapers, magazines, etc., and in discharging this duty it maintains a wide variety of services—air, railway, land and water.

This basic task involves many associated functions which include: the sale of postage stamps and other articles of postage; the furnishing of information to the public respecting postage rates and other postal matters; the registration of letters and other articles of mail; the insuring of parcels; the acceptance of C.O.D. articles for mail and despatch; the sorting, making up and despatching of ordinary and registered mail to other offices; the sorting and delivery of incoming mail of all kinds; the transaction of money-order business and the transaction of Post Office Savings Bank business.

All functions of the Postal Service, as far as the public is concerned, are centred in the post offices, of which 12,418 were in operation at Mar. 31, 1950. Postage paid by means of postage stamps in 1949-50 amounted to \$57,249,306. Post office money orders are issued for any amount up to and including \$100, at more than 7,600 post offices, for payment in Canada or almost every country in the world. Orders payable in Canada only for amounts under \$16 are issued at 4,000 additional post offices. Post Office Savings Banks are in operation in all parts of the country and on Mar. 31, 1950, had total deposits of \$38,754,634.

Post offices are established for the transaction of all kinds of postal business at places where the population warrants. The post office is a complete entity in rural districts and smaller urban centres. In the larger towns and cities there is a main post office and, if size of population calls for extra services, postal stations and sub post offices are operated. Letter-carrier delivery is given in 119 cities and towns by about 5,100 uniformed letter carriers.

Postal stations are maintained on the same lines as the main post offices and perform full postal business including general-delivery service and a post-office box delivery as well as letter-carrier delivery service, accommodating the surrounding district in which a postal station is maintained.

Because of its widespread facilities, it has been found expedient for the Post Office to assist other Government Departments in the performance of certain tasks which include: the sale of unemployment insurance stamps; the sale of Government annuities; the sale of radio licences; the distribution of income tax forms and Civil Service application forms and the display of Government posters.

**Organization.**—The Canada Post Office is divided into two parts: the Operating Service; and the Post Office Department, as headquarters at Ottawa is called. The Operating Service is organized into five regions each under a Regional Director, who is the field representative of the Deputy Postmaster General. There are four Headquarters Branches, viz., Administration, Operations, Communications and Financial, each under a Director.

Operating and secretarial features in the operating field affecting the Post Office and local mail services in urban centres are taken care of by the local postmaster. District Office functions relating to services in the district, and all inspections and investigations, are under District Post Office Inspectors situated at strategic centres across the country.

Postal service is provided in Canada from Newfoundland to the west coast of Vancouver Island, and from Pelee Island, Ont. (the most southerly point of Canada), to settlements and missions far within the Arctic.

Canada's air-mail system provides several flights daily from east to west and constitutes a great air artery from St. John's, Nfld., to Victoria, B.C., intersected with branch lines and connecting lines radiating to every quarter, and linking up with the United States air-mail system. Since July 1, 1948, all first-class domestic mail up to and including one ounce in weight has been carried by air between one Canadian point and another, whenever delivery can thus be facilitated. Air-stage service provides the sole means of communication with the outside for many areas in the hinterland. There are approximately 22,000 miles of air-mail and air-stage routes in Canada.

Nevertheless, the principal means of mail transportation is still the railway-mail service which operates along about 40,000 miles of track, and covers an annual track mileage exceeding 48,000,000. The railway mail service employs a staff of 1,386 mail clerks who prepare the mails for prompt delivery and despatch while *en route* in the railway mail cars. Like its air-mail service, Canada's railway mail service is one of the most extensive in the world.

An extensive rural mail delivery organization provides direct postal facilities to residents in the rural sections of the country: approximately 5,100 rural mail routes are in operation involving 117,000 route miles and serving 370,000 rural mail boxes. Rural mail routes are generally circular in pattern and average about 23 miles in length. Some 4,700 side services are in operation to transport mail between post offices, railway stations, steamer wharves and airports, while 3,200 stage services operate to convey mail to and from post offices not located on railway lines. In larger towns and cities there are approximately 500 city mail services transporting mails to and from sub post offices and postal stations, collecting mails from street letter boxes and delivering parcel post. In all, approximately 14,000 land mail service couriers are employed and travel in the neighbourhood of 50,000,000 miles annually. Land mail services are performed under a contract system. Contracts are awarded to the lowest competent tenderer who is paid according to his tender and who must provide all the requisite equipment.

The Post Office delivers an estimated 2,400,000,000 items of mail annually, and to do this utilizes mechanical handling devices, including conveyers, electric cancelling machines, etc., in its larger offices.

The increase in postal business is one of the impressive features of Canada's economic development during the past 10 years. From \$40,383,366 in 1941, net revenue increased year by year to \$84,528,655 by Mar. 31, 1950; gross revenue for the latter year was \$101,277,435, an all-time high.

## Section 1.—Post Office Statistics

Tables 1, 2 and 3 give the numbers of post offices in operation together with revenues and expenditures for the past few years.

			P.C. of all Postal Revenue	99·7	92·1

**Postage.**—The net revenue receipts shown in Table 2 are received mainly in the form of postage. The gross value of the postage stamps, post cards, etc., sold during each of the latest five fiscal years was: \$52,135,846 in 1945-46, \$55,263,063 in 1946-47, \$56,303,157 in 1947-48, \$56,317,570 in 1948-49 and \$57,249,306 in 1949-50. Receipts from postage paid in cash were as follows: \$23,252,162 in 1945-46, \$24,312,374 in 1946-47, \$28,959,194 in 1947-48, \$33,315,148 in 1948-49 and \$36,292,710 in 1949-50.

## Section 2.—Auxiliary Postal Services

Auxiliary postal services include the issuing of money orders and the operation of the Post Office Savings Bank.

Table 4 shows the amount of money-order business conducted by the Postal Service in recent years. The analysis of such business by provinces, published in former editions of the Year Book, has been discontinued. Because of a change in the type of money orders and in the method of recording them, statistics cannot be presented on a basis comparable with earlier years.

A table showing the financial business of the Post Office Savings Bank will be found in the Chapter on Currency and Banking, p. 1051.

### 4.—Operations of the Money-Order System, Years Ended Mar. 31, 1941-50

NOTE.—Figures for 1868-1940 will be found in the corresponding table of previous Year Books, beginning with the 1911 edition.

Year	Money-Order Offices in Canada	Money-Orders Issued in Canada	Value of Orders Issued in Canada	Value Payable in—		Value of Orders Issued in Other Countries, Payable in Canada

## PART IX.—THE PRESS

The tables of this Part are based on data obtained from *Canadian Advertising*. One serious difficulty has been encountered in connection with the compilation of circulation figures. In the case of daily newspapers, reliable circulation figures are relatively easy to obtain since, in their own best interest, such papers qualify for and subscribe to the Audit Bureau of Circulation requirements. In such cases A.B.C. 'net paid' figures were used. However, it is difficult to obtain reliable circulation figures for many weekly newspapers that do not subscribe to the Audit Bureau. In these cases, total circulation (paid and free) was taken where such figures were supported by sworn statements or some other reliable record.

The term "Controlled Distribution" is frequently met with in weekly newspaper reports. Exactly what this term means is doubtful. In some cases controlled distribution is probably legitimately subscribed and paid for, whereas in others the term may cover free distribution with various degrees of control. It is considered unwise, therefore, to combine all such circulation figures. Yet, since controlled distribution cannot be ignored, papers so reporting are shown separately in Table 5.

In compiling magazine circulation, total net paid figures, as reported by publishers to the Audit Bureau (including bulk sales), were used. In the relatively few cases where such figures were not available, minimum publishers' claims or sworn statements were accepted.

**Daily Newspapers.**—Daily newspapers are published in Canada in three main language groups: English, French and foreign. French daily newspapers have, as would be expected, a wide circulation in the Province of Quebec and some of the largest of these papers have been established in the Province for over 60 years. Eleven of the 12 French-language newspapers are published in that Province, the other being in the adjoining Province of Ontario.

Many of the daily newspapers extend their influence over the rural areas surrounding the cities where they are published. In this respect they supplement the weekly newspapers which feature essentially local news and serve the smaller cities, towns and rural areas only.

The larger metropolitan dailies, especially those of Montreal, Que., and Toronto Ont., have built up considerable circulation in areas outside their own cities. This, is especially true since rapid freight transport by highway and latterly by air has become more common. For instance, Montreal and Toronto morning papers (printed late the previous evening) can now be transported to Ottawa and delivered along the morning routes in competition with the local morning papers. Since these large metropolitan dailies can command exclusive feature services that the dailies of the smaller cities cannot afford, it often places them in an advantageous position in competition with the local dailies.

**Weekly Newspapers.\***—Weekly newspapers circulate within relatively restricted areas around their publication centres. They cater to a limited local interest but within the areas they serve they exercise an important influence. Canada is well served by foreign-language weekly newspapers. In 1949, they had a stated circulation of 177,478 copies among which Ukrainian papers had a circulation of 55,832 copies, Yiddish 28,958, German 25,998, and Polish 7,101 copies.

\* Including a very few semi- and tri-weekly newspapers.

**Other Publications and Periodicals.**—Table 7 gives the number of publications, other than newspapers, published in Canada. Monthly and weekly magazines and periodicals enjoy the largest circulation while those dealing with home, social and welfare, agricultural and rural topics, and religious, trade, industry and related publications are the most popular types.

**1.—Estimated Numbers and Circulations<sup>1</sup> of reporting Daily and Weekly<sup>2</sup> English-Language Newspapers, by Provinces, 1947-49**

NOTE.—Figures for the years 1938-46 are given at p. 788 of the 1948-49 Year Book.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

## PART I.—THE MOVEMENT AND MARKETING OF COMMODITIES

The different directions that economic development has taken across Canada and the diverse resources of various parts of the country have led to a vast exchange of products. The task of providing goods and services where they are required for consumption or use by the widely scattered population of 13,921,000 (Sept. 1, 1950, estimate) accounts for a greater expenditure of economic effort than that required for the prosecution of the country's great volume of foreign trade, high though Canada ranks among the countries of the world in this field.

Domestic trade is broad and complicated: it encompasses all values added to commodities traded in, provincially and interprovincially, by agencies and services connected with the storage, distribution and sale of goods, such as railways, steamships, warehouses, wholesale and retail stores, financial institutions, etc. Taken in a wide sense it embraces various professional and personal services including those directed to the amusement of the people, such as theatres, sports, etc. However, not all phases of this broad field are covered here though, wherever possible, cross references are given to related material occurring in other chapters. The arrangement of material in a volume such as the Year Book is governed by the necessity of interpretation from various angles. The Index will be found useful in this respect.

## Section 1.—Grain Trade\*

**Supply and Disposition of Field Crops.**—The large carryover stocks of wheat accumulated in Canada early in the War were rapidly disposed of during the crop years ended July 31, 1946 to 1949. World wheat supplies were then at a low ebb and world markets absorbed practically all of Canada's exportable surplus.

Domestic utilization of wheat and wheat products reached a high level during the latter part of the War but dropped steadily after 1945-46. This decline in domestic use is attributable to decreases in the amounts used for human consumption, for live-stock feed and for industrial purposes.

By July 31, 1949, shortages of wheat in deficit areas were becoming less acute and pressure on stocks in exporting countries was relieved to some extent. Carry-over stocks of Canadian wheat rose from 77,700,000 bu. at July 31, 1948, to 102,400,000 bu. on the same date in 1949.

### 1.—Production, Imports, Exports and Domestic Use of Wheat and Wheat Flour, Crop Years Ended July 31, 1944-49

(Millions of bushels)

Item	1943-44	1944-45	1945-46	1946-47	1947-48	1948-49

Domestic use.....	179.2	172.5	159.9	161.8	156.0	129.6
<b>Totals, Disposition.....</b>	<b>523.0</b>	<b>515.4</b>	<b>503.1</b>	<b>401.2</b>	<b>351.0</b>	<b>361.9</b>
Carryover July 31.....	356.5	258.1	73.6	86.1	77.7	102.4

<sup>1</sup> Less than 100,000 bu.

Exports of wheat, oats, barley and flaxseed were greater than in 1947-48 with outward shipments of rye remaining at about the same level. Feed for live stock and poultry accounts each year for large quantities of the grain used within the country, about 453,000,000 bu. being used for this purpose in 1948-49.

\* Revised by the Agriculture Division, Dominion Bureau of Statistics.

### 2.—Distribution of Canadian Grain Crops, Crop Year Ended July 31, 1949

**Wheat Flour.**—The volume of wheat flour produced in Canadian mills in 1948-49 dropped to 20,400,000 bbl., a decline of 3,800,000 bbl. from the previous year, but was still well above the pre-war (1935-39) average of 15,000,000 bbl. Wheat milled for the production of this flour amounted to 90,900,000 bu., a decrease of 18,900,000 bu. from the crop year 1947-48. Exports of wheat flour (based on adjusted customs returns) for the crop year under survey amounted to 10,700,000 bbl., equivalent to 52.4 p.c. of the same year's production, but a decrease of 3,000,000 bbl. from the 1947-48 export figure.

The percentage of milling capacity utilized for the crop year 1948-49 averaged 67.3, a decrease of 13.7 p.c. from that of the previous crop year.

**Grain Inspections.**—Total inspections of Canadian grain in the 1948-49 crop year amounted to 475,600,000 bu., well above the 386,000,000 bu. inspected in the previous crop year. These figures reflect the improved level of production in 1948 as compared with 1947. The large gain in Eastern Division inspections is attributable, in part, to the much better harvest of 1948, but the sharp increase in inspections of Eastern Division wheat also indicated a response to a strong market demand existing for Ontario winter wheat and flour.

<sup>1</sup> Includes 102,712 bu. wrecked *en route* to Canadian ports.

## Section 2.—Live-Stock Marketings\*

The volume of commercial marketing (primary movement to stockyards and packing plants) of cattle during 1949 was the third largest on record, exceeded only in 1945 and 1948. Quality, however, was reduced. While 53 p.c. of the steers marketed during 1948 came within the choice and good grades, the proportion was reduced to 46 p.c. in 1949. Similarly heifers of choice and good grades accounted for 36 p.c. of the total in 1948 and 30 p.c. in 1949. The number of hog carcasses graded decreased by 7 p.c. from the 1948 total and 31.1 p.c. were Grade A as compared with 31.8 p.c. in 1948. The proportion of Grade B carcasses increased to 53 p.c. from 52.5 p.c. in 1948. The volume of sheep and lambs graded alive decreased 13 p.c. while carcass grading increased slightly.

\* For more detailed information on this subject, see "Live Stock and Animal Products Statistics", published annually by the Dominion Bureau of Statistics; and the "Annual Market Review", published by the Live Stock Branch of the Federal Department of Agriculture. Statistics of live stock and poultry are given at pp. 389-393 and 401-403, respectively, of this volume.

### Section 3.—Warehousing and Cold Storage\*

Warehousing ranks high among the means by which the utilities of ‘place’, ‘time’ and ‘possession’ are added to the products of industry. Its importance has been emphasized in modern times because of the introduction of cold-storage methods to the conservation of perishable foods.

\* The material in this Section was supplied by various Divisions of the Departments of Agriculture, Fisheries, Mines and Technical Surveys, National Revenue and of the Dominion Bureau of Statistics.

The great difficulty in presenting warehousing statistics lies in the fact that it is not an easy matter to define clearly what are to be regarded as stocks in storage. In these days of complicated business relationships and especially since the rise of the department store and chain store as characteristic institutions in the retail merchandising field, it often happens that warehousing is carried on in close relationship to merchandising. However, if the strict economic definition of warehousing is adopted then this term should be restricted to those facilities that add the utility of 'time' to the 'form' utilities that are the product of the extraction and manufacturing industries. Since the warehouses established in close connection with retail trade are more often than not convenient places for the temporary storage of goods in process of transfer from the manufacturer or wholesaler to the consumer, then they are not, in the strict economic sense, services which add the utility of 'time' to commodities already worked up into 'form'. At least, since some clear line must be drawn and because separate statistics of this branch of storage are not available, it is considered practicable to interpret warehousing in this way.

The statistics of warehousing are shown together under one general heading in this Section. Subsection 1 presents statistics of the licensed storage of grain. Subsection 2 deals with cold-storage facilities without which perishable foods such as meats, dairy products, fish and fruits could not be exchanged or distributed on a wide scale; it includes also figures of stocks of food on hand. Subsection 3 deals with the storage of petroleum and its products and Subsection 4 with public warehouses and customs warehouses. The facilities that specialize in the storage of tobacco and alcoholic liquors are analysed in Subsection 5. These bonded warehouses, as they are called, are under the strict surveillance of Federal Government excise officers who supervise all movements into and from such places of storage.

#### Subsection 1.—Licensed Grain Storage

At Dec. 1, 1949, total licensed grain storage in Canada stood at 490,000,000 bu., an increase of 4,000,000 bu. from the level of Dec. 1, 1948. Since 1943, licensed grain storage capacity has dropped off considerably, largely as a result of the dismantling of temporary storage erected to handle the huge stocks of grain accumulated in the early years of the War. At Dec. 1, 1943, licensed grain storage capacity had reached an all-time high of 603,000,000 bu.

Export demand for Canadian grain has been good since the end of the War with the result that storage stocks have remained at relatively low levels. November and December are normally peak storage months but on Dec. 1, 1949, only 42 p.c. of Canada's licensed grain storage capacity was occupied. On Dec. 3, 1942, when both stocks in store and storage capacity were at near record levels, the proportion of licensed capacity occupied was just under 80 p.c.

At July 31, 1949, the end of the Canadian crop year, only 16 p.c. of licensed capacity was occupied. With this situation existing at the beginning of the new crop year and taking into consideration the moderate crop harvested in 1949, ample storage space was generally available in all positions during the 1949-50 crop year.

### 8.—Licensed Grain Storage Capacity and Grain in Store, 1948-49 and 1949-50

NOTE.—These figures, being exclusive of stocks in transit or in eastern mills, are lower than those shown in Table 16, pp. 392-393.

### Subsection 2.—Cold Storage and the Storage of Foods

**Cold-Storage Warehouses.**—Under the Cold Storage Act, 1907 (6-7 Edw. VII, c. 6; now consolidated as R.S.C., 1927, c. 25), subsidies have been granted by the Federal Government to encourage the construction and equipment of cold-storage warehouses open to the public: the Act and regulations made thereunder are administered by the Department of Agriculture.

There are nine classifications of cold-storage warehouses in Canada: (1) public warehouses which store foods and food products and of which the entire space is open to the public; (2) semi-public, or those which store foods and food products and which, while retaining part of the space for the products of the owner, allot the remainder to the public; (3) private, or those which store foods and food products and allot no space to the public; (4) creamery, which are used only for storing butter made in the creamery; (5) creamery locker having refrigerated space for their own butter and, in addition, lockers for rental to the public; (6) cheese factory, used only for storing cheese made in the factory; (7) cheese factory locker, or those which have refrigerated space for their own cheese and, in addition, have lockers for rental to the public; (8) locker, where the total space is occupied by lockers for rental to the public and which may, in addition, cut, process, chill

and freeze foods or food products for storage in lockers; and (9) grading station having refrigerated space used solely or principally for assembling cheese for grading purposes.

No hard and fast rule can be laid down for distinguishing between public and private warehouses. In general, those owned and operated by firms trading in the goods stored in the warehouses are designated "private", though most of these places rent space to the public when it is not required for their own purposes.

*Cold Storage of Fish.*—The holdings of frozen fish were rather high in 1949, the average monthly figure reaching 39,000,000 lb. as compared with 35,800,000 lb. in 1948.

The increased level was caused mainly by the difficulties encountered in the marketing of some species of fresh-frozen inland fish. Stocks of sauger, tullibee, yellow-pickrel, pike, etc., piled up in the last two months of 1948 and increased as the winter fishing operations progressed in Manitoba. During 1949, the Fisheries Prices Support Board purchased surpluses which were mainly disposed of as meal or animal food. Thus the inventories of inland species averaged 5,900,000 lb. monthly compared with 3,200,000 lb. in 1948.

Stocks of sea fish fresh-frozen were also slightly higher in 1949 than in the previous year, the monthly average being 30,500,000 lb. compared with 29,300,000 lb. Inventories of fillets of cod from the Atlantic Coast and of dressed cod from the Pacific Coast were slightly higher than in 1948 because of increased production in 1949. However, herring and mackerel holdings increased more significantly. It should be pointed out that a scarcity of bait was felt in 1948 due to the absence of herring for a few months on the Atlantic Coast.

The average monthly figure for frozen-smoked products was 2,600,000 lb., 700,000 lb. below that of 1948. A decrease in the production of smoked fish was reflected in the stock picture.

Seasonal variations normally occur in the stock position with a low in the spring and a high in the autumn. This follows naturally from the fact that the major part of the frozen fish is produced in the summer and early autumn months. Stocks piled up by autumn are intended to form the main supply of frozen products until the heavy production period of the following summer. In 1949, the low point was reached in May when inventories were 22,400,000 lb. and the peak in November when the figure was 53,700,000 lb. Occurrence of extremes coincided in time with 1948. The stock picture for the years 1948 and 1949 is summarized as follows:—

<u>Group</u>	<u>Average P.C. Contribution</u>		<u>Monthly Average</u>	
	<u>1949</u>	<u>1948</u>	<u>1949</u>	<u>1948</u>
	(‘000,000 lb.)		(‘000,000 lb.)	
Fresh-frozen sea-fish.....	78.3	81.8	30.5	29.3
Fresh-frozen inland fish.....	15.1	9.0	5.9	3.2
Frozen smoked fish.....	6.6	9.2	2.6	3.3
TOTALS.....	<u>100.0</u>	<u>100.0</u>	<u>39.0</u>	<u>35.8</u>

The main species of sea fish kept in cold storage are salmon, halibut, cod, haddock and herring; the most important fresh-water species are generally whitefish, pickerel and tullibee; the smoked fish consists mainly of herring, cod and haddock.

The above information refers to Canada with the exclusion of the new Province of Newfoundland. The frozen fish trade has developed significantly in that Province in recent years. From May 1, 1949, to the end of the year, the monthly stocks figure averaged 4,200,000 lb. The lowest figure was 2,900,000 lb. at Dec. 1, and the highest 6,000,000 lb. at Aug. 1. Inventories are almost exclusively confined to fresh-frozen sea fish in Newfoundland. Cod, haddock, rosefish and herring are the main species.

At the beginning of 1950, the total amount of frozen fish kept in cold storage was 39,200,000 lb. for the whole of Canada, including 2,200,000 lb. for Newfoundland. Figures were lower than at the opening of 1949, and a strong demand for frozen products kept inventories at a low level in the early months.

*Cold Storage of Dairy Products.*—Cold-storage facilities are a necessary adjunct in the manufacture of dairy products since most of them are perishable to a varying degree.

All creameries have facilities for the storing of butter, the size and type of storage depending on the size of the creamery. If the butter produced at small country plants is not printed for immediate sale, the butter solids are disposed of or are transported to larger creameries where better refrigeration is available or to private or public cold storages in the larger urban centres.

In the case of cheese, temperature control is important in the curing process as well as in the prevention of deterioration. Most cheese factories are equipped with mechanical refrigeration and are required to have storage capacity for 17 days' produce during the period of maximum manufacture. The cheese is then transferred to central warehouses.

Milk, as soon as it is bottled, is placed in storage and held until delivery. Dry whole milk and other dried milk products containing fat are usually stored in cool air chambers to prevent rancidity.

*Cold Storage of Other Foods.*—The marketing of the Canadian apple crop has undergone quite drastic changes in recent years. In pre-war years, and to some extent during the War, it was customary to export to the United Kingdom and the European Continent a substantial proportion of the crop early in the season. This limited the necessity of long-term cold storage to that portion retained for domestic distribution and other export. The curtailment in export outlets during the post-war years has necessitated greater long-term cold-storage capacity in order to extend the marketing period for a much larger proportion of the crop. The degree to which cold-storage facilities have increased is illustrated by a comparison of the holdings on Dec. 1, the beginning of the storage season. During the years 1943-47 the Dec. 1 stocks averaged 53 p.c. in cold storage and 47 p.c. in common storage. The average for the two years 1948 and 1949 was 77 p.c. in cold and only 23 p.c. in common storage. Additional space under construction will maintain or increase the proportion of cold storage in future years.

Potatoes are generally held at production points and shipped out as needed throughout the season. While warehouse storage is quite common in parts of Prince Edward Island, Nova Scotia and New Brunswick where commercial production is centred, most of the crop is stored in frost-proof cellars and pits.

### Subsection 3.—Storage of Petroleum and Petroleum Products

Bulk storage plants for petroleum and petroleum products are established at convenient distributing centres and usually on a water-front so that full advantage can be taken of the lower cost of water-borne traffic. From these centres the goods are transferred by boat, rail or truck to smaller distributing depots or directly to retail outlets. The principal refining and distributing centres are located at or near Halifax, Quebec, Montreal, Ottawa, Toronto, Sarnia, Fort William, Regina, Calgary, Turner Valley, Edmonton and Vancouver.

### 12.—Inventories of Petroleum and Petroleum Products in Storage at Jan. 1, 1946-50

(Barrels of 35 Imperial gallons)

### Subsection 4.—General Warehousing

**Public Warehouses.**—The Dominion Bureau of Statistics began, in 1944, an annual census of the principal public warehouses in Canada. Warehousing carried on by co-operatives, packing houses and other firms operating storage facilities in connection with their own businesses are not included. Several companies deriving more revenue from a moving, cartage or carrier business than from warehousing are also not included but are covered in the report "Motor Carriers, Freight-Passenger, 1948". In order to show the trend in the industry, Table 13 has been prepared from data supplied by 112 firms which reported for both 1947 and 1948. Further details are given in the report "Warehousing, 1948", published by the Dominion Bureau of Statistics.

### 13.—Summary Statistics of 112 Public Warehousing Firms Reporting in 1947 and 1948

Item	1947	1948	Item	1947	1948
Total revenue..... \$	15,731,160	17,371,896	Wages, regular..... \$	4,677,962	5,336,830
Total operating expenses. \$	13,124,857	14,315,442	Wages, casual..... \$	278,485	259,707
Net operating revenue.. \$	2,606,303	3,056,454	Salaried employees.....No.	971	910
Net income..... \$	1,635,925	2,079,033	Salaries..... \$	1,863,383	1,924,522
Employees, regular....No.	2,933	2,896	Total salaries and wages. \$	6,819,830	7,521,059
Employees, casual.... "	328	235			

The net occupiable space reported by 141 firms in 1948 comprised 3,715,385 sq. ft. for merchandise, 2,053,272 sq. ft. for household goods and 15,188,887 cu. ft. of cold-storage space. Merchandise space increased by almost 400,000 cu. ft. over the 1947 figure but little change was recorded in space available for the other two classes of storage.

**Customs Warehouses.**—Warehouses for the storage of imported goods are known as customs warehouses. These are divided into nine classes as follows: (1) those occupied by the Federal Government, some of which are used for examination and appraisal of imported goods while others, known as King's Warehouses, are used for the storage of unclaimed, abandoned, seized or forfeited goods; (2) warehouses, consisting of an entire building or part thereof, properly separated from the rest of the building by a partition, which are used exclusively for the storage of imported goods consigned to the proprietor of the building; (3) buildings or parts of buildings properly partitioned off, used for the storage of imported goods consigned to the proprietor or others or for the storage of unclaimed or seized goods; (4) sufferance warehouses operated by the owners of vessels for the storage of in-bond goods transported by water or air;\* (5) yards, sheds and buildings intended for the storage of imported coal and coke; (6) farms, yards, sheds, etc., which an importer of horses or sheep intends to use for the feeding and pasturing of imported animals other than pure-bred mares; (7) warehouses for the storage of animals, including horses for racing, and articles for exhibition or competition for prizes; (8) warehouses for clover seed imported for the purpose of being recleaned and prepared for a foreign market; and (9) yards, sheds, etc., which importers intend to use for the storage of goods too heavy or too bulky to be admitted to an established customs warehouse.

#### Subsection 5.—Bonded Warehousing and Storage of Wines

**Bonded Warehousing.**—The Excise Duty Branch of the Department of National Revenue considers any premises licensed under the Excise Act to be a warehouse, whether for storage of raw materials to produce finished tobacco or cigar products or for spirits or malt used for brewing. Practically the total production of spirits is placed in bonded warehouses while only a small part of the output of beer is retained in storage. Wine, unlike spirits and beer, is not secured under bond. All imports of alcoholic beverages must go through bonded warehouses before being released to Provincial Liquor Commissions or Boards, or other agencies authorized by the Commissions or Boards to take alcoholic beverages out of bond. Similarly, tobacco, cigars and cigarettes which are not stamped and duty paid, are secured in bond. In addition to these warehouses, there are those in which no manufacturing or production is carried on, but are used solely for the storage of goods upon which duty has not been paid. Goods are stored in these warehouses usually for the purpose of rapid distribution and for delivery as ships' stores.

*Spirits, Tobacco and Malt in Bond.*—Table 14 shows the quantities of distilled liquor, tobacco, cigars and cigarettes in bond in recent years. The yearly inventory of breweries showed an increase of total gallonage of beer in stock from 22,137,000 in 1948 to 22,534,000 in 1949.

\* Railways and express companies have similar facilities.

## 14.—Distilled Liquor, Tobacco, Cigars and Cigarettes in Bond, Quarterly, 1946-50

<sup>1</sup> Excludes Newfoundland.<sup>2</sup> Includes Newfoundland.

In Table 15 the quantities of spirits, malt and tobacco products that have been released from bond for consumption are shown for the years 1941-50. These figures, supplied by the Department of National Revenue, are the most reliable data for the consumption of these bonded products.

## 15.—Spirits, Malt Liquor, Malt and Tobacco taken out of Bond for Consumption, Years Ended Mar. 31, 1941-50

NOTE.—Figures for the years prior to 1900 are given in the 1916-17 Year Book, p. 528; for 1901-10 in the 1933 Year Book, p. 840; for 1911-21 in the 1938 Year Book, p. 855; for 1922-29 in the 1945 edition, p. 936; and for 1930-40 in the 1947 edition, p. 964.

Year	Spirits	Malt Liquor	Malt	Cigars	Cigarettes	Tobacco <sup>1</sup>
	gal.	gal.	lb.	No.	No.	lb.

<sup>1</sup> Includes snuff.

**Storage of Wines.**—The wine industry is confined to a few localities such as the Niagara Peninsula in Ontario and the Okanagan Valley in British Columbia. Firms manufacturing native wines are not bonded, as far as the Federal Government is concerned, nor is wine in storage for maturing placed in bond. The only goods

warehoused in bond in connection with wineries are their sugar supplies and supplies of grape spirit distilled by the distilleries and held by the wineries for fortifying their wines. Native wine produced and placed in storage for maturing and blending for the years 1944-48 was reported as follows:—

Year		Ontario	Other Provinces	Total
1944.....	gal.	3,863,592	349,958	4,213,550
	\$	1,600,835	204,928	1,805,763

#### Section 4.—Merchandising and Service Establishments\*

A complete coverage of the multiplicity of establishments making up Canada's distributive system is attempted only in census years. Some studies were made in the late 1920's, but results were incomplete and the Censuses of 1931 and 1941 represent the only complete analyses of the merchandising and services fields. Vol. X of the Census reports for each year contains information on retail establishments, and comprehensive material on the extent of the wholesale and services trades appears in Vols. XI of the reports. Summary census statistics are presented at pp. 596-621 of the 1945 Year Book and at pp. 527-536 of the 1943-44 edition.

Census results have been supplemented by statistical measurements, mainly based on sample surveys, of certain features of the distributive trades in other than census years. In an effort to meet the increasing needs of business, industry and government for information on the Canadian market, its nature and characteristics, considerable expansion and refinement of the statistical services has been carried out and plans are in progress to meet the requirements for information in greater geographical detail. Results of the Census of 1951 will be known in 1953 following a mail survey to be undertaken in 1952.

##### Subsection 1.—Wholesale Trade Statistics

**Sales and Inventory Indexes.**—Indexes of wholesale sales date from 1935. They are prepared from reports supplied by a sample of firms in nine principal trades. The reporting panel is confined to wholesalers proper, i.e., those establishments that perform the complete functions of wholesalers and jobbers, buying merchandise in large quantities on their own account and selling principally to retailers in broken lots. The individual kinds of wholesale business for which results are compiled are those that handle the more common types of consumer merchandise.

Indexes of wholesale inventories are calculated for only two trades, dry goods and groceries. Monthly percentage change comparisons are made for each of the nine trades, based on a smaller sample.

Wholesale sales in Canada in the nine trades surveyed were 3 p.c. higher in 1949 than in 1948, 105 p.c. in excess of the dollar volume in 1941, and 191 p.c. above the average annual sales for the same trades in the base period, 1935-39.

\* Revised in the Merchandising and Services Section, Industry and Merchandising Division, Dominion Bureau of Statistics.

The average index of sales (unadjusted) for the 12 months of 1949 (on the base, average for 1935-39=100) stood at 291.3 as compared with 283.2 for 1948 and 142.0 for 1941. An examination of the year-to-year trends indicates a falling-off in the rate of increase. In 1948, sales were 4 p.c. above 1947, 1947 sales were 12 p.c. above 1946, while 1946 sales exceeded 1945 volume by 19 p.c. These figures represent increases in dollar volume of sales and are not adjusted for price changes.

The Prairie Provinces recorded the largest gain of any region, with sales up 8 p.c. in 1949. Small decreases were registered in Quebec and British Columbia.

Fruit and vegetable dealers, whose 1948 sales fell 14 p.c. below 1947, made a recovery in 1949 to record the largest increase (11 p.c.) of any of the nine trades. They continued to lead during the first half of 1950 according to preliminary figures. All the dry goods and apparel trades registered smaller sales volumes in 1949 than in 1948. Footwear wholesalers' sales declined 2 p.c., sales of clothing wholesalers were down 6 p.c., while a drop of 9 p.c. in sales was reported by dry goods wholesalers. The trend continued into 1950, sales during the first six months of that year being lower than in the corresponding period of 1949 by 7 p.c. for footwear wholesalers, 10 p.c. for clothing wholesalers, and 8 p.c. for dry goods wholesalers. Automotive equipment and hardware dealers' sales, which showed increases of 5 p.c. and 4 p.c., respectively, in 1949 over 1948, were both 3 p.c. lower in the first half of 1950 than in the first six months of 1949.

# **16.—Annual Indexes of Wholesale Sales and Inventories, by Kinds of Business and by Areas, 1941-49**

(1935-39=100)

<sup>1</sup> Excludes Newfoundland.

**Operating Results of Wholesalers.**—Ten wholesale trades concentrated in the consumer goods field, eight of which are comparable with those covered in the sales index series, are represented in the statistics on operations of wholesalers in 1949. This is the second of a series on the operations of wholesalers begun in 1947.

## 17.—Operating Ratios of Wholesalers, for Selected Kinds of Business, 1949

NOTE.—All figures except stock turnover are percentages of net sales.

Kind of Business	Cost of Goods Sold	Gross Profit	Selling Expense	Warehouse and Delivery Expense	Administrative and General Expense	Net Operating Profit <sup>1</sup>	Stock Turnover Rate <sup>2</sup>
	p.c.	p.c.	p.c.	p.c.	p.c.	p.c.	No.

<sup>1</sup> Before addition of other income or deduction of income tax.  
sold divided by the average of beginning and year-end inventories.<sup>2</sup> Times per year—cost of goods

Those trades whose sales included foods in one form or another had the smallest profit ratios, both gross and net. The lowest gross profit percentage was that for tobacco and confectionery wholesalers at 7 p.c. followed by grocery wholesalers with a gross profit of 8 p.c. and fruit and vegetable wholesalers with a gross profit of 11 p.c. In other cases gross profit ranged from 12 p.c. for drugs to 25 p.c. for automotive equipment.

Expenses also varied within a wide range in the different functions with administrative and general expenses greater than either selling or warehouse and delivery. Net profits were lowest in the food trades and ranged from 0.64 p.c. for grocery wholesalers to 7.17 p.c. for wholesalers of heating and plumbing supplies.

## Subsection 2.—Retail Trade Statistics

From Canadian fields and farms, forests, mines, stockyards, factories and mills, from foreign lands through Canadian Atlantic and Pacific seaports, goods travel through innumerable channels to finally converge on the retail outlets before being dispersed again, but this time in small parcels made up to individual tastes for the consumer trade. Thus the retailer occupies an important place between producer and consumer and, in a real sense, is the keystone of the distribution arch, for it is through the retail outlets that every necessary operation of production for consumption is brought to its intended conclusion.

**Retail Sales.**—The volume of retail sales in Canada reached a peak in 1949, with total trade estimated at \$8,428,000,000, 7 p.c. higher than that attained in 1948 when sales totalled \$7,842,000,000. Corrections have not been made for changes in prices of consumer goods and dollar sales are, therefore, not indicative of changes in actual quantities of merchandise sold.

The motor-vehicle trade, with an aggregate volume of \$1,030,000,000, spear-headed the upward sales movement in recording a gain of 23 p.c. over 1948. Total sales for grocery and combination grocery and meat stores amounted to \$1,337,000,000 and gained 7 p.c. over 1948. Department stores ranked third with a total of \$856,000,000 and a gain of 6 p.c. over the previous year. The majority of the remaining trades showed increased sales volumes but, apart from the substantial gains recorded by motor-vehicle dealers and garages and filling stations, increases were of moderate proportions. Consumer commitments for automotive purchases probably caused some moderation in sales of other consumer goods.

All provinces recorded increased sales volumes in 1949, the Prairie Provinces showing gains considerably greater than those reported in other regions.

### 18.—Estimated Retail Trade, by Provinces and Kinds of Business, 1941 and 1947-49

**Operating Results of Retail Stores.**—*Retail Chain Stores.*—The characteristic features of chain-store operations were first available for 1947 from a survey undertaken in 1948. The 1949 study continues this series which, together with wholesale operating results studies for the same year and independent store studies begun some years earlier (last taken for 1948), have created a balanced body of information on distribution costs. The main profit-and-loss items of the selected trades are given in Table 19.

### 19.—Operating Results of Retail Chain Stores, for Selected Kinds of Business, 1948

NOTE.—All figures except stock turnover are percentages of net sales.

Kind of Business	Cost of Goods Sold	Gross Profit	Total Operating Expenses	Salaries and Wages	Occupancy Expense	Supplies Used	Net Operating Profit <sup>1</sup>	Stock Turnover Rate <sup>2</sup>

<sup>1</sup> Before other income or deduction of income tax, by the average of beginning and year-end inventories.

<sup>2</sup> Times per year—cost of goods sold divided

These results illustrate a distinctly different experience for food chains than for other classes of chain stores. Food chains operate with lower profit and expense ratios than do the others shown. They also have a higher stock turnover rate, particularly where meat sales form all or part of total sales.

*Retail Independent Stores.*—Studies concerning the operating ratios of independent retail merchants have been carried on over an extended period. Such statistics have been gathered to assist merchants in assessing the efficiency of various phases of their operations, to provide estimates of the contribution made to national income by unincorporated retail stores and to assist the prospective entrant into any of the retail trades in sizing up his opportunities and prospects of success. Since the publication of recent detailed studies, their value as a basis for marketing research and as essential elements in the understanding of the structure of retail distribution has become evident.

### OPERATING RESULTS OF UNINCORPORATED INDEPENDENT RETAIL STORES, 1948

GROSS PROFIT = NET PROFIT + SALARIES + OTHER EXPENSES

Attention has been focussed on the relationships between net sales, gross trading profit or margin, operating expenses and net profit. Expenses have been examined in some detail to include salaries and wages paid to employees; advertising; store supplies; losses on bad debts; tax and insurance costs; rentals; heat, light and power used; repair and maintenance expense; depreciation; and other items.

Table 20 reviews some of the operating features of various trades based on 1948 averages.

## 20.—Operating Ratios in Retail Trade, by Kinds of Business, 1948

NOTE.—Independent, unincorporated firms only. All figures except stock turnover are percentages of net sales.

Kind of Business	Cost of Goods Sold	Gross Margin	Total Operating Expenses <sup>1</sup>	Salaries and Wages <sup>2</sup>	Occupancy Expenses <sup>3</sup>	Net Profit before Income Tax <sup>4</sup>	Inventories		Stock Turn-over <sup>5</sup>

<sup>1</sup> Includes salaries and wages, occupancy expense and store supplies plus all other expenses. <sup>2</sup> Salaries and wages do not include delivery or proprietors' salaries. <sup>3</sup> Includes taxes and insurance, light, heat and power, repairs, maintenance, depreciation (except on delivery equipment) and rentals on rented premises. <sup>4</sup> Includes proprietors' salaries or withdrawals. <sup>5</sup> Times per year—cost of goods sold, divided by average of beginning and year-end inventories.

**Retail Consumer Credit.**—Studies on retail consumer credit, an outgrowth of special inquiries conducted by the Wartime Prices and Trade Board during the period of controls, have been continued by the Dominion Bureau of Statistics since 1945. Only those trades in which the extension of credit plays an important part were brought within the scope of these surveys.

Sales and accounts receivable are measured in terms of their change, in index form, since the base period of the series—1941. Sales are related to a 1941 quarterly average and accounts receivable to the amount outstanding at Dec. 31, 1941. Table 21 shows indexes by quarterly periods for 1948, 1949 and the first six months of 1950.

While wartime restrictions on instalment buying were in effect, the proportion of sales made under extended term contracts decreased. The effects of regulations introduced in the latter part of 1950 are not yet apparent. In terms of absolute volume, instalment sales, as is clearly shown by the indexes in Table 21, have not increased since 1941 to the same extent as have cash and charge sales.

Table 22 traces, for various trades, the movement in sales indexes since 1946, with differentiation between cash, instalment and charge sales. Statistics for 1946 are not available for the last six trades shown in the table. Trends in accounts outstanding are reviewed in a similar manner. The annual indexes shown were obtained by averaging the quarterly indexes allowing appropriate weighting for each quarter.

<sup>1</sup> Instalment credit not characteristic of this trade.

The outstanding development of recent years in the field of retail consumer credit has been the rapid recovery of instalment sales following the period of war-time controls. In 1946, the indexes of instalment sales for eight of the ten trades selling on the instalment plan were below the 1941 level. By 1949 only three remained lower.

It is of interest to note that in several trades cash sales declined between 1948 and 1949 while credit sales moved upward.

### Subsection 3.—Statistics of Service Establishments

**Theatres.**—Canada's theatres numbered 2,200 in 1949 and had receipts of \$78,559,779 with an additional \$12,616,789 being collected in amusement taxes. Newfoundland figures were included in 1949 for the first time. Without Newfoundland, the number of theatres in the nine provinces was 2,155 with receipts (excluding taxes) of \$77,701,797 and taxes amounting to \$12,559,804. This was an increase of 5 p.c. in number of theatres and of 12 p.c. in receipts over the 1948 figures of 1,950 theatres with receipts of \$69,657,248.

Attendance at Canadian theatres continued to rise but to a lesser extent than receipts. Paid admissions in 1949 numbered 230,333,513 persons in the nine provinces, 3.5 p.c. higher than 1948 admissions which totalled 222,459,224. Newfoundland theatres accounted for an additional 2,665,032 admissions.

These figures do not include drive-in theatres or itinerant exhibitors of motion pictures. The 30 drive-in theatres operating in Canada in 1949 had receipts (excluding taxes) of \$1,392,760 and paid admissions numbering 3,091,314. There were 174 itinerant exhibitors in 1949 who gave performances in 846 towns and villages. Motion picture performances given by these itinerants brought \$494,858 in receipts (excluding taxes), and were attended by 1,626,638 persons.

Per capita attendance at motion picture entertainment in Canada provided by these three types of exhibitors was 17 times per year, based on the estimated population of 13,845,000 for 1949.

### 23.—Motion Picture Theatres and Receipts, by Provinces, 1930, 1941 and 1947-49

NOTE.—Itinerant operators and legitimate theatre operators are not included in these figures. Receipts are exclusive of amusement taxes.

<sup>1</sup> Figures for 1948 and 1949 include, in addition to regular theatres, establishments in which motion picture entertainment is provided by community organizations such as churches, lodges, Boards of Trade, etc. In 1948 these halls numbered 346 with receipts of \$962,927 and in 1949, 469 halls had receipts of \$1,140,307.

**Power Laundries, Cleaning and Dyeing Establishments.**—Reports on this group of service establishments have been issued by the Dominion Bureau of Statistics since 1930. Summary data for 1930-47 and data by provinces for 1947 are given at pp. 867-868 of the 1950 edition of the Year Book.

#### Subsection 4.—Miscellaneous Merchandising Statistics

**Hotels.**—The first survey of hotels since the 1941 Census was made in 1949 and little change was shown in the number of hotels operating in Canada since 1941. However, an increase of 140 p.c. in receipts for hotel business was recorded. Hotels in Canada numbered 5,847 in 1949 with receipts amounting to \$355,234,000 compared with 5,646 in 1941 with receipts of \$147,488,000.

Canadian hotels contained, in 1949, 155,512 rooms, providing accommodation for 268,343 persons. Included in the totals were 4,799 hotels operating on a year-round basis with receipts amounting to \$336,753,000. The remaining 1,048 were seasonal hotels with a total revenue of \$18,481,000.

In Ontario there were 422 establishments licensed as public-houses which were included with hotels for purposes of comparability with the 1941 figures. Receipts of these public-houses amounted to \$30,774,000 in 1949, of which \$26,613,000 was accounted for by beverage-room sales.

Receipts reported for all hotels amounted to \$355,234,000, \$189,404,000 of which was from sales of beer, wine, and liquor; \$60,365,000 from meal sales; and \$78,377,000 from room rentals. Expenditures totalled \$324,031,000 which includes \$75,379,000 paid in salaries and wages.

**Farm Implement Sales.**—Manufacturers' and importers' sales of farm machinery and implements in 1949 (mainly at wholesale prices) amounted to \$217,089,685, 27 p.c. above 1948 sales totalling \$170,666,070. It is estimated that, in terms of retail prices, Canadian farmers spent approximately \$265,000,000 on implements and machinery in 1949 as compared with \$204,000,000 in 1948. These figures do not include expenditures for trucks, machine parts, binder twine or other farm supplies.

Sales of repair parts in 1949 totalled \$28,104,505, at wholesale prices, or an estimated \$36,000,000 at retail, 4 p.c. above the 1948 volume of sales.

**New Motor-Vehicle Sales.**—Estimated passenger-car sales in 1950 reached an unprecedented high of 323,000 units. This number was 60 p.c. above the 1949 total of 202,318 units, which was in turn 40 p.c. higher than the 145,655 cars purchased in 1948. The large number of automobiles imported from the United Kingdom helped to swell the volume in both years, while the removal, in 1948, of restrictions which had curtailed imports from the United States was also a factor, though a less important one.

Sales of commercial vehicles in 1950 advanced 23 p.c. over 1949, 103,700 units being sold in 1950 and 84,023 in 1949. These totals include 573 buses in 1949 and 655 in 1950, a gain of 14 p.c.

**Finance Company Operations.**—In 1949, 104 finance companies were active in the financing of consumer, commercial and industrial goods in Canada. The total volume of financing was \$285,000,000, an increase of 37 p.c. over the 1948 total of \$208,000,000. Consumer goods accounted for a much higher proportion of the total in 1949 than in 1948, largely the result of a much expanded activity in the financing of passenger cars. Consumer goods accounted for two-thirds of the total, while the remaining one-third was for commercial and industrial goods. Finance company operations are not yet so greatly concentrated in the consumer goods field as they were in 1941, but the trend is in that direction.

Balances outstanding on retail instalment paper have mounted sharply in recent years and the total at the end of 1949 was \$184,000,000, 42 p.c. above the year-end total of \$130,000,000 in 1948. On consumer goods, outstanding balances totalled \$116,000,000 at the end of 1949 compared with \$70,000,000 at Dec. 31, 1948.

The financing of motor-vehicle sales, both new and used, is the chief activity of finance companies. In 1941, motor-vehicle financing accounted for 85 p.c. of the total, while in 1947, 1948 and 1949 the percentages were 62 p.c., 70 p.c. and 78 p.c., respectively.

Table 29 gives a record of the financing of motor-vehicles for the ten years ended 1949. The figures do not agree exactly with those in Table 28 because they were obtained as a product of supplementary monthly surveys and are subject to reporting inconsistencies.

<sup>1</sup> Includes Newfoundland.

The proportion of new vehicles sold for cash was quite high when new vehicle production was resumed after the Second World War. Each of the years 1947, 1948 and 1949 has witnessed an increase in the proportion of cars purchased on instalments through finance companies and this trend is revealed in Table 30. At 28.5 p.c. in 1949, the proportion still remains well below the pre-war rate when the range was from 32 p.c. to 39 p.c.

### Section 5.—Co-operative Organizations\*

Reports were received by the Department of Agriculture from 2,637 co-operatives of all types—marketing and purchasing, fishermen's and service—covering their business years ended within the 12 months preceding July 31, 1949. Membership reported totalled 1,219,712 and the total volume of business, including other revenue, reached a record of \$1,001,437,990. Each of these figures—number of reports, volume of business, and revenue—showed a substantial increase over 1948. Most significant was the increase of over \$200,000,000 in volume of business. Marketing co-operatives reported a volume increase of approximately \$167,000,000 in 1949 and purchasing co-operatives \$34,000,000. Increases reported by other types were insignificant.

The number of marketing and purchasing co-operatives reporting increased by 128. Fishermen's co-operatives reporting increased by 16, due mainly to the inclusion of Newfoundland and an increase in Prince Edward Island. Service co-operatives increased by 88, a result of increased coverage in Alberta, Ontario and Quebec. Membership in 1949 showed an increase of 60,668 over the total reported for 1948.

**Developments during 1948-49.**—During 1949 the Manitoba and Saskatchewan Wheat Pools marked 25 years of service in marketing grain for the farmers of western Canada. The Alberta Wheat Pool had celebrated its 25th anniversary in 1948.

Recognizing the recent rapid growth of co-operatives in Canada some provincial governments have expanded their staffs and services in order adequately to service and supervise all co-operatives within their jurisdiction. In March, 1949, the Department of Agriculture in Manitoba announced the formation of a Directorate of Co-operative Services within the Department which would include the offices of registrar of co-operatives and supervisor of credit unions. Upon the entry of Newfoundland into Confederation on Mar. 31, 1949, it was announced that one of the portfolios of the new provincial cabinet would be the Department of Fisheries and Co-operatives. Eight of the ten provincial governments now have officials directly responsible for administering co-operative legislation and supervising co-operative activities. In Prince Edward Island, however, this task is performed by the P.E.I. Co-operative Union, Limited, aided by a grant from the Province. The secretary of the co-operative union is required to report officially to the Government each year.

On June 1, 1949, Part XII of the Companies Act of Ontario relating to co-operative corporations became effective. The former Part XII—considered inadequate by many co-operative leaders in the Province—was repealed and a new and more acceptable section was passed into the statutes. The main feature of the new legislation provides for the purchase for redemption of all or part of the shares held by a shareholder upon payment of an agreed-upon sum not exceeding the par value of the shares. Shares purchased for redemption may not be re-issued.

\* Prepared under the direction of J. G. Taggart, C.B.E., Deputy Minister of Agriculture, by J. E. O'Meara, Marketing Service, Economics Division.

The first fisherman's co-operative on the Great Lakes, the Ontario Fishermen's Co-operative, was organized in February, 1949, and was patterned after the organization of the United Maritime Fishermen. The products of the new co-operative will be marked mainly in the the United States.

In November, 1949, the Department of Fisheries and Co-operatives in Newfoundland held a conference of all co-operative leaders in the Province in order to plan future organization and extension work. As a result, working arrangements were completed between Maritime Co-operative Services at Moncton, N.B., and United Maritime Fishermen at Halifax, N.S., to supply local Newfoundland co-operatives and to aid in the marketing of fish. First steps were also taken towards the organization of a provincial co-operative union for the Province of Newfoundland which would be affiliated with the Co-operative Union of Canada.

**Marketing.**—For the crop year ended July 31, 1949, the sales value of farm products marketed by co-operatives in Canada amounted to \$783,293,225 which was an increase of \$166,945,748 over the total reported for the same period ended in 1948.

All farm products with the exception of wool and fruit and vegetables shared in the general increase. The largest increases were reported by the dairy products, live-stock and grain co-operatives. Live-stock marketing co-operatives reported an increase in sales value of nearly 40 p.c. over 1948, due mainly to the lifting of restrictions on beef-cattle exports. Wool sales were down slightly because of liquidation of flocks which also helped increase volume and value of live-stock sales. The decrease in fruit and vegetables sales was minor.

Sales value of grains increased by over \$81,000,000 due to a rise in price for western wheat as well as increased handlings by the three pools and the United Grain Growers. The latter organization and the Manitoba Pool Elevators increased their facilities at country points during the year and generally increased their physical plant for handling an appreciable increase in volume. The four grain-marketing co-operatives in Western Canada handled 50 p.c. of the total volume delivered in the three western provinces during 1949.

Considered in relation to the sales values, it has been calculated that during 1948-49 co-operatives handled 32.9 p.c. of the main farm products entering into commercial channels of trade, an increase of 0.8 p.c. over the previous year. For the various products concerned similar percentages are as follows, with the previous year shown in parentheses: dairy products, 25.5 (22.6); live stock, 18.6 (18.5); poultry and eggs, 18.4 (18.6); wool, 79.7 (68.1); grains, 55.1 (56.2); fruits and vegetables, 27.5 (27.4); maple products, 26.8 (25.1); tobacco, 89.9 (99.0); honey, 12.1 (6.0).

**Merchandising.**—Sales of merchandise reported for the year 1948-49 amounted to \$191,804,630, an increase of \$33,390,585 over the figure reported for the previous year. Increases occurred in sales of farm machinery, clothing and home furnishings, food products and coal and wood. Feed and fertilizer sales, which increased by 16 p.c. over 1947-48, was the largest single item handled by merchandising co-operatives with a total of over \$77,000,000.

All provinces shared in the reported sales increase except Manitoba; in that Province accurate reporting resulted in the elimination of duplication of sales between the wholesale and the locals. Alberta reported a sizable increase in sales attributable to increased coverage and reporting.

*Wholesaling.*—In 1948-49, 11 co-operatives mainly engaged in wholesaling farm supplies and consumer goods reported 24 places of business which were owned, through federation, by 1,829 local co-operatives. Total assets amounted to \$20,354,250. Plant value or fixed assets less allowance for depreciation amounted to \$5,010,973, an increase of \$1,000,000 over 1948. Liabilities to members increased by \$2,750,000 in 1949 over 1948, liabilities to the public by \$1,700,000, and members' equity in the wholesales by over \$1,000,000.

Total sales of farm products through the wholesales during 1948-49 amounted to \$63,282,375 most of which was live-stock and dairy products. This volume increased by \$11,000,000 over reported sales in 1947-48. Total sales of merchandise in the later year amounted to \$50,142,277, an increase of \$8,000,000 over 1947-48. Feed and fertilizer sales by wholesales in 1948-49 amounted to \$24,144,293, petroleum products sales to \$9,295,063, and food products \$4,498,758.

Interprovincial Co-operatives, Limited, a federation owned by the provincial wholesales, owns and operates a bag factory at Montreal, Que., which supplies the requirements of regional members. Hardware and groceries are also handled by this federation. Flour produced in the Saskatchewan Wheat Pool mill at Saskatoon is sold by Interprovincial Co-operatives, Limited, to the regionals and eventually to the local associations and the consumer. It is also responsible for export sales of the products of this mill and is entering into the import business in a small way by buying jute, tea and paint brushes from the United Kingdom, jute from India, and engines, water systems, oil filters and tools from the United States.

*Retailing.*—Sales of food products in 769 co-operative retail stores amounted to \$48,900,000 during 1948-49; clothing and home furnishings amounting to \$8,271,503 were handled by 532 outlets; and feed and fertilizer sales of over \$15,000,000 through 317 stores. Saskatchewan had the largest number of retail outlets followed by Quebec and Alberta.

<sup>1</sup> Includes other revenue.

**Service Co-operatives.**—Additional coverage in 1949 in Alberta, Quebec and Ontario resulted in an increase in the number of reports from service-type co-operatives, more and more of which are being organized. Electricity co-operatives

in Quebec and Alberta are numerous and Ontario's 42 rural medical services co-operatives are providing prepaid hospital services for thousands of farmers and their families. Membership in 156 service-type co-operatives in 1949 numbered 58,714 and total revenue from services rendered was \$2,500,000.

**Fishermen's Co-operatives.**—In 1949, over 100 fishermen's co-operative associations reported a total membership of 16,300 and total business of \$16,729,765. The increase over 1947-48 is accounted for by the inclusion of seven associations in Newfoundland and ten others reporting for the first time.

The greatest number of fishermen's co-operatives is found in the Atlantic Provinces and Quebec but by far the largest volume was reported by seven co-operatives in British Columbia. The \$9,000,000 of business reported by these co-operatives was 54.5 p.c. of the total for all provinces.

**Insurance.**—There were 410 organizations classified as farmers' mutual fire insurance companies active in Canada in 1948. The net admitted assets amounted to \$24,453,274 and assets in the form of unassessed premium note residue totalled \$33,883,924. The net amount of insurance at risk was over \$2,000,000,000 and losses paid in 1948 amounted to \$5,552,594.

A co-operative life insurance company with headquarters at Regina, Sask., now operates in six provinces. It reported coverage on the lives of 38,000 Canadians in 1949 and the amount of insurance in force was \$25,800,000—an increase of \$8,000,000 over the amount in force in 1948.

### Section 6.—Interprovincial Freight Movements\*

Statistics on interprovincial trade are difficult to collect because there are no barriers to this trade. The only comprehensive statistics available are the loadings and unloadings of freight carried by the railways. Railway traffic is segregated into 76 classes of freight and the differences between loadings and unloadings are the imports and exports *by rail* for the respective provinces. Freight can, however, be imported by rail and exported by water, as is the case with western grain moved to the Ontario ports of Fort William and Port Arthur. Consequently, the statistics of Table 34 must not be taken as a measure of total interprovincial trade: these figures indicate interprovincial movement of railway freight which is one aspect only of that trade.

\* Revised in the Transportation Section, Public Finance and Transportation Division, Dominion Bureau of Statistics.

Figures for freight originating and freight terminating do not agree because that freight which originates within a certain year does not all terminate within the same year. On the other hand, some that terminated in 1949, for instance, originated within the previous year.

## PART II.—GOVERNMENT AIDS TO AND CONTROL OF DOMESTIC TRADE

During the post-war period, the elaborate system of government control of trade that the war effort had made necessary was gradually relaxed (see the 1943-49 Year Book, pp. 837-841) until only those measures retained to protect domestic requirements and prevent the forcing up of prices in the Canadian market remained by the beginning of 1949. Since then even these have practically disappeared.

### Section 1.—Controls Affecting the Handling and Marketing of Grain

The agencies exercising control of the grain trade in Canada include the Board of Grain Commissioners, which since 1912 has administered the provisions of the Canada Grain Act, and the Canadian Wheat Board, which operates under the Canadian Wheat Board Act, 1935. The former is a quasi-judicial and administrative body which, through the powers vested in it in matters of interprovincial transportation and patents and copyrights, gives the Federal Government complete power to control the handling of grain; it has no power or duties in respect to grain prices. The Canadian Wheat Board, which began to function in the autumn of 1935, was a natural outgrowth of government stabilization measures that had been taken during the depression years of the 1930's in regard to the marketing of grain crops. During this period the Government had acquired a considerable volume of wheat and, in the 1935 session of Parliament, legislation was passed to serve the double purpose of disposing of the holdings so acquired and at the same time arranging for marketing the new crops.

An account of the organization and functions of the Board of Grain Commissioners appears at pp. 481-482 of the 1941 Year Book. An article on the operations of the Canadian Wheat Board is included in the 1939 Year Book, pp. 569-580, and is brought up to date in the 1947 edition.

## Section 2.—Combinations in Restraint of Trade\*

Federal legislative measures for aiding and regulating trade include specific prohibitions of operation against the public interest by monopolies and similar commercial combinations. Monopolistic trade arrangements tending to eliminate competition in price, supply or quality of goods, and thereby to restrain trade unduly, are illegal under the Combined Investigation Act and Sect. 498 of the Criminal Code. These laws are designed to promote reasonable competitive opportunities for the expansion of production, distribution and employment.

The first federal legislation in this field was enacted in 1889 and is still effective in amended form as Sect. 498 of the Criminal Code. Legislation providing for investigation of trusts or combines was first enacted in 1897 as part of the Customs Tariff Act. In 1910 a separate Combines Investigation Act was passed and further legislation was enacted in 1919 and 1923.

**The Combines Investigation Act.**—The Combines Investigation Act (R.S.C., 1927, c. 26), which was enacted in 1923 and amended in 1935, 1937, 1946 and 1949, provides for the investigation of trade combinations, monopolies, trusts or mergers alleged to have operated to the detriment of the public through limiting production, fixing or enhancing prices, limiting competition or otherwise restraining trade. Organizations of this nature are defined by the Act as "combines", and participation in the formation or operation of a combine is an indictable offence. Investigations of alleged combines under the Act are conducted under the direction of the Combines Investigation Commissioner who reports to the Minister of Justice. The Commissioner may also receive and investigate complaints respecting practices alleged to be offences under Sects. 498 and 498A of the Criminal Code which concern offences related to those covered by the Combines Investigation Act. Amendments made to the Combines Investigation Act in 1949 were intended to remove certain procedural and evidentiary difficulties that had been encountered in combines proceedings and, in particular, to deal with certain difficulties with respect to the proof of documentary evidence that had arisen in the dental supplies case. Consultations are held with individuals and representatives of business groups interested in discussing the possible application of the Act to conditions encountered or to arrangements being considered.

The report of the Commissioner of an investigation into the distribution and sale of flat glass in Ontario and Quebec, submitted in December, 1949, alleged the existence of a combine among members of an association of glass jobbers which had unduly lessened competition in the glass-jobbing trade through agreements on prices, terms and conditions of sale. In April, 1950, eight corporations and one individual carrying on an unincorporated business were indicted by a Grand Jury at Toronto, Ont., under Sect. 498(d) of the Criminal Code. Pleas of guilty were entered on behalf of all the accused when they appeared for trial before Mr. Justice Treleaven in the Supreme Court of Ontario at Toronto on Sept. 25. Sentence was deferred until Oct. 6, when the maximum penalty of \$10,000 was imposed on each of three larger corporations while fines of \$2,500 were imposed on five smaller corporations and a fine of \$1,500 on one individual. The accused were ordered to pay costs of the prosecution in proportion to the penalties imposed.

Following an investigation into the manufacture, distribution and sale of matches, a report was submitted by the Commissioner on Dec. 27, 1949, in which it

\* Revised by T. D. MacDonald, K.C., Commissioner, Combines Investigation Act, Department of Justice.

was alleged that a combine by way of merger, trust or monopoly existed in the wooden match industry in Canada. The report alleged that a monopoly had been established in 1927 through the merger of the match businesses of three companies and that subsequently a number of independent companies or their properties were brought under the control of the dominant company. Prosecution was instituted in the Province of Quebec on the direction of the Minister of Justice and the five companies named in the report were charged with offences against the Combines Investigation Act in informations laid in September, 1950. The preliminary hearing was held at Montreal, Que., during October and the accused were committed for trial in the Quebec Court of King's Bench.

In the report of a special commissioner made in November, 1948, a combine was alleged to exist in the bread-baking industry in the Provinces of Saskatchewan, Alberta and British Columbia. Prosecution was instituted in Alberta on the direction of the Minister of Justice and six bread companies and one incorporated trade association were charged with an offence against Sect. 498(d) of the Criminal Code in an information laid in January, 1950. The preliminary hearing was held at Calgary during March and April and the accused were committed for trial at the conclusion of the hearing. The trial was later fixed for the autumn criminal sittings of the Alberta Supreme Court. On the advice of counsel, the charge against the trade association was not proceeded with.

In November, 1949, the Minister of Justice informed the House of Commons that counsel had recommended that no charges be laid in the optical goods case. A report alleging the existence of a combine among certain manufacturers and wholesalers of optical goods had been submitted following an investigation under the Combines Investigation Act. The principal reasons for the recommendation of counsel were related to difficulties of proof in connection with the evidence and the fact that there had been fairly complete abandonment of the arrangements that constituted the basis of the case. The Minister of Justice pointed out that while there were strong reasons of public policy against the practice of abandoning prosecution merely because the restrictive arrangements had been withdrawn in the face of various proceedings, the evidentiary difficulties were so formidable that it was considered that, in this case, the opinion of counsel should be followed.

During 1950 a variety of matters were disposed of on preliminary inquiry while in a number of other cases investigations were proceeding at the end of the year.

### Section 3.—Trade Standards\*

The Standards Division of the Department of Trade and Commerce consolidates under one director, the administration of the Electricity Inspection Act, the Gas Inspection Act, the Electricity and Fluid Exportation Act, the Precious Metals Marking Act, and the Weights and Measures Act.

**Commodity Standards.**—On Nov. 26, 1949, Parliament passed the National Trade Mark and True Labelling Act which provides a framework for the development of the National Standard and true labelling in order to circumvent public deception in advertising.

In brief, the use of the National Standard is voluntary, and compliance with commodity standards affects only those manufacturers who desire to use the national trade mark. In addition, where manufacturers label descriptively any commodity

\* Prepared by R. W. MacLean, Director, Standards Division, Department of Trade and Commerce.

or container, it must be labelled accurately to avoid public deception. One such regulation of interest applies to the labelling of fur garments, and has established itself as a code of fair practice throughout the merchandising field.

Under the terms of the Precious Metals Marking Act, 1946 (c. 26), commodities composed of gold, silver or platinum may be marked with a quality mark which describes accurately the quality of the metal. Where such mark is used, a trade mark registered in Canada, or for which application for registration has been made, must also be applied. Gold-plated, silver-plated or platinum-plated articles may also be marked under certain conditions outlined in the Act. The inspection staff of the Standards Division is engaged in the examination of advertising matter, in verifying the quality of articles offered for sale and in checking the marks applied.

**Weights and Measures.**—The Weights and Measures Act prescribes the legal standards of weight and measure for use in Canada. Responsibilities under the Act require control of the type of all weighing and measuring devices used for commercial purposes, their periodic verification and surveillance directed towards the elimination of sales by short-weight or short-measure.

The number of inspections made in the year ended Mar. 31, 1950, was 485,452,\* compared with 518,885 in 1948-49. The more important inspections comprised the following: weighing machines, including scales of all kinds, 233,634; measuring machines for liquids, 67,018; other weights, 134,044; other measures, 50,756. Total expenditures were \$512,539 in 1949-50,\* compared with \$510,308 in 1948-49. Total revenues were \$472,282\* and \$464,626, respectively, for the two years.

**Electricity and Gas Inspection.**—Responsibilities of the Standards Division under the Electricity Inspection Act and the Gas Inspection Act comprise the control of the types of electricity meters and gas meters used throughout Canada, and the testing and stamping of every meter used for billing purposes, the object being to ensure the correct measurement of all electricity and gas sold. For the administration of these two Acts, Canada is divided into three divisions and 23 districts; the total staff is 145. During the year ended Mar. 31, 1950, 939,960\* electricity and gas meters were tested as compared with 960,213 in the preceding year. Revenue derived from the testing amounted to \$655,391\* and expenditures to \$463,227.\*

\* Excludes Newfoundland.

### 1.—Electricity and Gas Meters in Use, Years Ended Mar. 31, 1941-50

Year	Electricity Meters	Gas Meters				
		Manu- factured Gas	Natural Gas	Acetylene Gas	Petroleum Gas	Total
	No.	No.	No.	No.	No.	No.
1941.....	2,109,437	519,095	192,097	4	1,157	712,353
1942.....	2,181,945	524,669	197,781	4	1,196	723,650

<sup>1</sup> Excludes Newfoundland.

The Electricity and Fluid Exportation Act came into force in 1907. Under its provisions no electric energy or fluid, whether liquid or gaseous, may be exported from Canada without a licence. Total exports of electric energy during the year ended Mar. 31, 1950, amounted to 1,723,853,781 kwh. There was also a small exportation of natural gas.

### Section 4.—Patents, Copyrights and Trade Marks\*

Letters patent are issued subject to the provisions of the Patent Act, 1935 (25-26 Geo. V., 1935, c. 32, as amended by 11 Geo. VI, 1947, c. 23), and applications for protection relating to patents should be addressed to the Commissioner of Patents, Ottawa.

#### 2.—Patents Applied for, Granted, etc., Years Ended Mar. 31, 1945-50

Item	1945	1946	1947	1948	1949	1950
Applications for patents.....No.	12,672	14,778	16,922	16,585	12,751	13,172
Patents granted.....“	7,084	7,412	6,590	7,175	7,959	8,513
Granted to Canadians.....“	486	495	520	580	570	655
Caveats granted.....“	302	421	438	313	326	356

Fees received, net.....\$	388,593	421,539	452,193	631,929	625,451	636,772

The number of Canadian patents granted increased fairly steadily each year from 4,522 at the beginning of the century to a peak of 12,542 in 1923 and has remained between 6,500 and 8,600 for the past ten years. Of the 8,513 patents granted in 1949-50, 6,349 or 74 p.c. were from inventors resident in the United States, 976 from residents of the United Kingdom and other Commonwealth countries, 655 from Canadian residents, while residents of France obtained 133, of Switzerland 112, and of other countries 288.

The year ended Mar. 31, 1950, showed marked increases over previous years for applications in many classes of invention. Those in the fields of chemistry and electricity were most numerous especially artificial resins, processes of polymerization, dyes, additives to oils for use as lubricants, plasticizers, insecticides and therapeutic substances, pulse-code modulation, colour television, wave guides, refinements in amplifiers, pulse transmission and telemetric systems. In electronics, development of computing machines and the use of high-frequency heating continued. Applications for welding and heating, vapour lamps and starting means, are quenching for circuit breakers, cables and electroplating were also numerous.

In metallurgy, invention was directed to new alloys and the processing of ores; in aeronautics, to automatic pilot controls and jet-propulsion engines; in agricultural fields, to milking machines, hitches and tractor-operated controls for farm machinery; in mining, to drilling muds, drill bits and mounts; in photography and optics to colour-sensitizing emulsions, photometers and motion-picture apparatus; in material handling, to snow ploughs, conveyers, logging systems, excavating and loading vehicles; in building construction, to concrete blocks and slabs and prefabricated houses and in amusement and like devices, to games, toys, skis, hockey sticks and fish baits.

\* The material relating to patents and copyrights has been revised by J. W. T. Michel, Acting Commissioner of Patents, and that relating to trade marks by J. P. McCaffrey, Registrar of Trade Marks, Department of the Secretary of State, Ottawa.

Increased attention has been directed to such diversified inventions as button-sewing machines, ash trays, chain saws, awnings, venetian blinds, display boxes, loose-leaf binders, windshield wipers, suction cleaners, fish-dressing machines, razor-blade dispensing packages, gauges, cigarette lighters, flashlights, pipe couplings, and transmissions.

**Copyrights, Industrial Designs and Timber Marks.**—Registration of copyright is governed by R.S.C., 1927, c. 32, and applications for protection relating to copyrights should be addressed to the Commissioner of Patents, Ottawa.

The Copyright Act of 1921 (consolidated in R.S.C., 1927, c. 32) sets out, in Sect. 4, the qualifications for a copyright and, in Sect. 5, its duration: "Copyrights shall subsist in Canada. . . in every original literary, dramatic, musical and artistic work, if the author was, at the date of the making of the work, a British subject, a citizen or subject of a foreign country which has adhered to the Berne Convention and the additional Protocol. . . or resident within His Majesty's Dominions. The term for which the copyright shall subsist shall, except as otherwise expressly provided by this Act, be the life of the author and a period of fifty years after his death".

Copyright protection is extended to records, perforated rolls, cinematographic films, and other contrivances by means of which a work may be mechanically performed. The intention of the Act is to enable Canadian authors to obtain full copyright protection throughout all parts of the Commonwealth, in foreign countries of the Copyright Union and in the United States of America, as well as in Canada.

Protection of industrial designs and of timber marks is afforded under the Trade Mark and Design Act (R.S.C., 1927, c. 201) and amendments, and the Timber Marking Act (R.S.C., 1927, c. 198) and amendments. Registers of such designs and marks are kept by the Copyright Branch of the Patent Office, and information regarding them is published in the Canadian "Patent Office Record".

### 3.—Copyrights, Industrial Designs and Timber Marks Registered, Years Ended Mar. 31, 1945-50

Item	1945	1946	1947	1948	1949	1950

**Trade Marks and Shop Cards.**—The Trade Marks Office, a Branch of the Department of the Secretary of State, is charged with the administration of the Unfair Competition Act, 1932, which repealed all previous Acts governing trade marks, and the Shop Cards Registration Act, which came into force on Sept. 1, 1938. Applications for registration of trade marks and shop cards should be addressed to the Registrar, Trade Marks Office, Ottawa.

A Register of Trade Marks is kept, in which, subject to the provisions of the Act, any person may cause to be recorded any trade mark he has adopted, and notification of any assignments, transmissions, disclaimers and judgments relating

to such trade mark. In order that the public may be kept informed in the matter of trade-mark registration, a list of registered marks appears in the Canadian "Patent Office Record" which is issued weekly.

The Shop Cards Registration Act is designed to afford a measure of protection to organizations, such as trade unions, that formerly were able to register their particular designations as Union Labels under the Trade Mark and Design Act. Registrations under the Act may be renewed every 15 years.

#### 4.—Trade Marks and Shop Cards Registered, Years Ended Mar. 31, 1944-49

### Section 5.—Subventions and Bounties on Coal\*

Subventions have been regulated during past years by Orders in Council authorizing the payment of certain rates of assistance in respect of the various movements of coal specified therein from moneys voted annually by Parliament for that purpose. It has not been considered practicable to fix subvention aid by statute owing to the frequent changes in the competitive situation.

Expenditures for subventions by provinces, for the years 1945-49 were as follows:—

Province	1945	1946	1947	1948	1949
Nova Scotia..... :.....ton	443,024	471,054	296,599	1,403,306	1,853,604
\$	949,073	486,661	141,156	954,846	2,435,111
New Brunswick..... :.....ton	4,132	2,555	2,528	724	3,025
\$	3,016	2,065	1,698	724	3,838
Saskatchewan..... :.....ton	15,541	15,736	12,559	31,787	94,957
\$	14,912	14,972	11,923	25,366	64,933
Alberta and eastern British Columbia..... :.....ton	566,470	850,314	252,076	282,608	441,938
\$	890,768	1,359,506	532,139	635,253	897,970
British Columbia bunker and export..... :.....ton	22,409	13,775	9,294	5,728	36,170
\$	16,807	10,331	6,971	4,296	29,893
TOTALS..... :.....ton	1,051,577	1,353,434	573,056	1,724,154	2,429,692
\$	1,874,577	1,873,535	693,887	1,620,487	3,431,745

The Coke Bounty Act, 1930 (20-21 Geo. V, c. 6), implemented one of the recommendations of the Royal Commission on Maritime Claims and was approved by Parliament on May 30, 1930. It placed Canadian coal used in the manufacture of iron and steel on a basis of equality with imported coal.

\* Prepared by F. G. Neate, Executive Secretary, Dominion Coal Board, Ottawa. Additional information on subventions and bounties, as summarized from the "Report of the Royal Commission on Coal, 1946" is given in the 1947 Year Book, pp. 770-771.

Bounties paid under this authority for the five years 1945-49 were as follows:—

	1945	1946	1947	1948	1949
Quantity.....ton	601,785	539,538	555,386	712,150	740,288
Amount.....\$	297,884	267,071	275,139	352,514	366,443

## Section 6.—Control and Sale of Alcoholic Beverages\*

The provincial liquor control Acts have been framed to establish provincial monopolies of the retail sale of alcoholic beverages, with the practical elimination of private profit therefrom. Partial exception is made in the retail sale of beer by brewers, or others which certain provinces permit, while reserving regulative rights and taxing such sales heavily. The provincial monopoly extends to the retail sale and not to the manufacture of alcoholic beverages. The original liquor control Acts have been modified from time to time as deemed advisable.

The distilled liquor industry produces not only beverage spirits but also industrial alcohol such as (1) unmatured, denatured by distillers, used in anti-freeze and numerous other items, and (2) unmatured, non-denatured, used in chemical compounds, pharmaceutical preparations and vinegar. Production of industrial alcohol (denatured and non-denatured) totalled 7,535,098 pf. gal. in 1949, a decrease of 1,544,674 pf. gal. from 1948. Beverage spirits produced and placed in bond for maturing totalled 14,251,996 pf. gal. as compared with 17,211,972 pf. gal. the previous year. Sales in 1949 of denatured alcohol for anti-freeze, solvents, cleaning fluids, perfume manufacturing, etc., amounted to 3,538,803 standard gal. as compared with sales of 4,767,219 standard gal. in 1948. Sales of 2,478,455 gal. of non-denatured alcohol in 1949 were 277,187 pf. gal. lower than in 1948. Beverage spirits sold (domestic and export sales) amounted to 15,371,626 pf. gal. in 1949 and 13,933,988 pf. gal. in 1948.

Materials used show important changes. Wheat was the major item during the War but in 1948 and 1949, due to restrictions resulting from world food problems, consumption declined to only 2,623,344 lb. from a peak of 402,535,232 lb. in 1944. Corn replaced wheat, increasing from 15,833,741 lb. in 1944 and 45,191,740 lb. in 1945 to 169,695,984 lb. in 1949. Wheat flour (alcomeal), introduced during the War and consumed to the extent of 77,268,410 lb. in 1944, ceased to be of importance in the later years.

**Net Revenue from Liquor Control.**—The provincial figures of net revenue shown in Table 5, include not only the net profits made by Liquor Control Boards or Commissions, but also additional amounts of revenue received from permits, licences, etc., sometimes paid direct to provincial governments. The Prince Edward Island Temperance Act became effective July 1, 1948, and net revenue of the Prince Edward Island Temperance Commission will be shown in the 1952 edition of the Year Book, as will that of the Province of Newfoundland.

The Federal Government, for the year ended Mar. 31, 1949, also collected in excise duties, customs duties, excise taxes, licence fees, etc., \$79,401,370 on spirits, \$59,693,050 on malt and malt products and \$2,639,966 on wines.† Corresponding collections for the year ended Mar. 31, 1950, were \$80,749,812 on spirits, \$59,754,546 on malt and malt products and \$2,713,057 on wines.

\* In the main this material has been abridged from the Dominion Bureau of Statistics report "The Control and Sale of Alcoholic Beverages in Canada" which gives an outline of federal and provincial legislation concerning the control and sale of alcoholic beverages.

† These figures do not include sales tax, details of which are not available for separate commodities.

### 5.—Net Revenues Received by the Provincial Governments from Liquor Control, by Provinces, Provincial Fiscal Years, 1941-49

NOTE.—These figures are for provincial fiscal years ended on the following dates: N.S., Nov. 30; N.B., Oct. 31; Que., Mar. 31; Ont., Mar. 31; Man., Apr. 30, 1941-46, Mar. 31, 1947-49; Sask., Apr. 30, 1941-46, Mar. 31, 1947-49; Alta., Mar. 31; and B.C., Mar. 31.

Year	Nova Scotia	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia

<sup>1</sup> Eleven months.

**Apparent Consumption of Alcoholic Beverages.**—Accurate measurement of the consumption of alcoholic beverages by Canadians is practically impossible since no separate record is kept of sales to non-residents of Canada. Temporary additions to the resident population through tourist travel are, at certain seasons, extremely large. In 1949, for example, almost 25,000,000 visitors crossed the International Boundary into Canada. Sales of alcoholic beverages to certain of these visitors undoubtedly reached considerable proportions.

In Tables 6, 7 and 8 an attempt is made to indicate the apparent consumption in Canada of spirits, beer and wine, respectively, on the basis of the quantities produced, imported, exported, etc. It should be noted that these figures take no account of increases or decreases in the quantities held in stock by the Boards or by licensees. For instance, the Boards may, in certain years, buy heavily to replenish stocks or create reserves; such purchases would unduly weight the consumption figures for those years.

Practically the total production of spirits is placed in bonded warehouses whence it is released for various purposes. The quantities shown in Table 6 as entered for consumption are released from warehouses, duty paid, presumably for consumption for beverage purposes in Canada.

Only a small part of the output of beer is placed in warehouses. The available supply, as shown in Table 7, is, therefore, made up of production, changes in warehouse stock and imports.

The apparent consumption of native wines as shown in Table 8 is obtainable by dividing the rates of excise tax into the total tax collections.

### 6.—Apparent Consumption of Beverage Spirits, Years Ended Mar. 31, 1943-50

NOTE.—Figures for the years 1924-42 are given at p. 532 of the 1941 Year Book. After 1942 a change was made in the method of computing apparent consumption of beverage spirits.

Year	Entered for Consumption	Add Imports	Deduct Re-Exports of Imported Spirits	Apparent Consumption

## PART III.—BANKRUPTCIES AND COMMERCIAL FAILURES

The three Sections of this Part, although closely related as far as subject matter is concerned, cover different aspects of the field of bankruptcies and commercial failures and the statistics presented in each Section are not comparable.

Section 1 is limited to the administration of bankrupt estates by the Superintendent of Bankruptcy under the Bankruptcy Act (including the Farmers' Creditors Arrangement Act). This Section, however, gives definite information on the amounts realized from the assets as established by debtors and indicates that values actually paid to creditors are invariably very much lower than such estimates alone would imply. It can, therefore, be assumed that this applies in even greater degree to the more extended fields covered in Sections 2 and 3.

Section 2, on the other hand, is limited to bankruptcies and insolvencies made under federal legislation (the Bankruptcy Act and the Winding-Up Act) but not failures, sales, or seizures carried out apart from such federal legislation. The

Dominion Bureau of Statistics figures include failures of individuals such as wage-earners and farmers. A change in the method of computation is being investigated whereby separate data will be shown for insolvencies by wage-earners and farmers as distinct from industrial and commercial mortalities. The figures of assets and liabilities are estimates made by the debtor, and unfortunately are not made uniformly. The human element enters into them to a considerable degree and they should, therefore, be accepted with reservations.

The statistics given in Section 3 are compiled by Dun and Bradstreet, Incorporated. This mercantile agency is interested primarily in credit information and their statistics include bankruptcies in general, insolvencies under provincial companies' Acts and such proceedings as bulk sales, bailiffs' sales, landlords' seizures, etc., when loss to creditors results. On the other hand, the statistics do not include assignments of farmers (under the Farmers' Creditors Arrangement Act) or of wage-earners, so that, as a rule, the totals run lower than those in Section 2. Since between the years 1875 and 1919 the agencies, now Dun and Bradstreet, Incorporated, were the only source of figures of commercial failures, their statistics have an added value because they present a historical series back to 1915 though the basis of classification was changed after 1933. (see text preceding Table 7).

## Section 1.—Administration of Bankrupt Estates

According to Sect. 91 of the British North America Act, "the exclusive legislative authority of the Parliament of Canada" extends to bankruptcy and insolvency legislation, and an Insolvency Act (32-33 Vict., c. 16) was passed by the Federal Parliament in 1869, and applied to the four original provinces. This Act was renewed by c. 46 of the Statutes of 1874. In 1875 a new Insolvency Act (38 Vict., c. 16) applicable to the whole of Canada was passed, but was repealed in 1880. After this there was no federal legislation on the subject of bankruptcy until the Bankruptcy Act, 1919, except that under the Winding-Up Act insolvency was one of the grounds upon which a company could be wound up. In addition to regulating bankruptcy proceedings, the Bankruptcy Act, 1919, contained a provision which enabled an insolvent person, prior to bankruptcy, to make a proposal to his creditors. This provision was abrogated in 1923 but was subsequently restored in part by the Companies' Creditors Arrangement Act, 1933, which, however, restricted its operations to incorporated companies. Somewhat similar legislation was made available to farmers under the Farmers' Creditors Arrangement Act, 1934. Federal insolvency legislation now comprises the Bankruptcy Act, the Farmers' Creditors Arrangement Act, the Companies' Creditors Arrangement Act and to some extent the Winding-Up Act. The two Arrangement Acts above referred to are designed to avert failure and the statistics in this Section and in Section 2, therefore, do not include proposals or arrangements under these Acts. When such proposals or arrangements are rejected by the creditors or fail in their purpose the proceedings may then come under the Bankruptcy Act, the bankruptcy provisions of the Farmers' Creditors Arrangement Act and in certain circumstances the Winding-Up Act. There are no provisions in the Companies' Creditors Arrangement Act for the liquidation or winding-up of insolvent companies.

The administration of bankrupt estates is supervised by the Superintendent of Bankruptcy (appointed in 1932) with the object of conserving as far as possible the assets of bankrupt estates for the benefit of the creditors.

<sup>1</sup> Exclusive of assets realized direct by secured creditors. The amounts so realized were approximately \$2,596,068 in 1942, \$1,799,722 in 1943, \$1,201,289 in 1944, \$1,811,803 in 1945, \$684,039 in 1946, \$582,811 in 1947, \$1,597,781 in 1948 and \$2,534,369 in 1949.

<sup>2</sup> Exclusive of the city shown separately.

<sup>3</sup> Exclusive of Newfoundland.

Under the Farmers' Creditors Arrangement Act, 1943, assignments are made only in those cases in which the farmers are hopelessly insolvent and, in many cases, the assignments follow the rejection of proposals submitted to the creditors. Receiving orders are made only in cases in which the farmers have failed to fulfil the terms of their proposals as accepted by the creditors and approved by the court. Table 2 shows only statistics of estates closed by assignments or receiving orders and does not indicate the proposals that have been approved and are being carried out under the Farmers' Creditors Arrangement Act. For the year 1949 only the Provinces of Quebec and Ontario reported assignments.

## Section 2.—Returns under the Bankruptcy and Winding-Up Acts as Compiled by the Dominion Bureau of Statistics

Under the Bankruptcy and Winding-Up Acts (R.S.C. 1927, cc. 11 and 213), certain documents relating to estates administered under these Acts have, since July, 1920, been forwarded to the Dominion Statistician for statistical analysis. However, changes in the Acts effective in 1923 affected the comparability of the figures for 1921 and 1922, the two earliest full years for which statistics were compiled. The series, therefore, began with 1923, except for the analysis by branches of business, in which case 1924 was the first year in which statistics were compiled. The statistics of this Section cover all bankruptcies and insolvencies that come under federal legislation, including assignments of individuals and farmers.

## 3.—Bankruptcies and Insolvencies under Federal Legislation, by Provinces, 1940-49

### Section 3.—Industrial and Commercial Failures from Private Sources

A historical table giving failures for Canada and Newfoundland, by classes, for the years 1915 to 1935 is given at p. 969 of the 1936 Year Book. Early in 1936, Dun and Bradstreet, Incorporated, from whose reports these figures were taken, adopted a new method of classification. The principal changes consisted of setting up a new group of construction enterprises previously included in manufacturing and a new class for commercial service. Real estate companies, holding, and other financial companies, and agents of various kinds were omitted. These changes have had the effect of confining the failure records more to industrial and commercial lines of activity, and liabilities are reduced more in proportion to the number of failures since the companies eliminated usually ran high in indebtedness. The figures in Table 7, which are available back to 1934, are, therefore, not comparable with the earlier series. Figures for Newfoundland are included from Mar. 31, 1949.

**7.—Industrial and Commercial Failures, by Classes, 1940-48, and by Provinces, 1949**

(From Dun and Bradstreet, Incorporated)

NOTE—Figures for 1934-39 are given at p. 628 of the 1946 Year Book.

<sup>1</sup> Nine months.

In 1949, Quebec and Ontario accounted for 68 p.c. and 17 p.c., respectively, of the total failures. As regards liabilities, Quebec accounted for 58 p.c. of the total as compared with 22 p.c. registered for Ontario.

According to Dun and Bradstreet, Incorporated, the number of commercial failures during the war years 1939-45 showed a steady decrease year by year and, whereas before the War the great majority of failures were in retail trading establishments, the proportion in that group also showed a steady decrease during those years. Since the end of the War, however, the numbers of failures have shown substantial increases amounting to 134 p.c. in 1947 over 1946, 62 p.c. in 1948 over 1947 and 21 p.c. in 1949 over 1948. Each group contributed to the advance in 1949.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

The subject of foreign trade covers more than the treatment of imports and exports of commodities, important though this is. In its broader sense, foreign trade is made up of the total international exchanges of goods, services, securities and other financial exchanges, all of which are presented in their proper relationship in the three Parts of this Chapter. Part I gives detailed statistics of external commodity trade. Part II summarizes external transactions from a standpoint of the balance of international payments. Part III outlines the various ways in which the Government promotes and encourages trade relationships, and reviews the Canadian tariff structure.

## Review of Foreign Trade\*

### World Trade in 1948 and 1949 as it Affected Canada

The value of total world trade in both 1948 and 1949 was at approximately the same level, viz., slightly over 10 p.c. higher than in 1947. The volume changes were less, with 1948 a little above 1947 and 1949 about 5 p.c. greater than in 1948. The share of United States trade in the total value was still very large, but it was declining—from 21 p.c. in 1947 to 17 p.c. in 1948 and 16 p.c. in 1949. Canada accounted for approximately 5 p.c. of the world trade.

In 1948 and 1949, Canadian exports were at their highest levels in history. However, in view of the inconvertibility of many currencies, this situation must be regarded from two sides. Canadian exports to the Sterling Area and to other soft-currency countries actually declined considerably. This development would have created serious problems for the Canadian economy had not exports to the dollar countries increased to more than offset other losses. This increase provided Canada in 1948 and 1949 with levels of exports which contributed greatly to the maintenance of domestic prosperity.

Restrictions on dollar expenditures by the Sterling Area and other soft-currency countries became particularly widespread in 1948 and 1949 and affected Canadian export trade very materially. The inability of these countries to earn sufficient

\* Prepared by E. P. Weekes, Ph.D., Economic Research and Development Branch, Department of Trade and Commerce.

dollars obliged them to reduce their dollar imports and to resort to bilateral trading practices. To some extent the unfavourable repercussions of restrictions against dollar goods were alleviated by the European Recovery Program which authorizes the European countries receiving aid to make some of their purchases in Canada, or other "off-shore" countries, rather than in the United States. To Canada this has meant that a greater level of exports to Europe of such commodities as grains, metals, lumber and some capital goods, was possible than would otherwise have been the case.

The principal contributing factor to the maintenance of Canadian exports in 1948 and 1949 was, however, the heavy United States demand. The minor recession experienced by the United States economy during the first part of 1949 led to a falling-off of United States imports from overseas; but for a variety of reasons the United States demand for Canadian goods remained at high levels during the entire year. The success of Canadian commercial policy in promoting an expansion of Canadian exports to the United States may be seen from the following trade figures: in 1946 such exports amounted to \$909,000,000; in 1947 to \$1,057,000,000; in 1948 to \$1,522,000,000; and in 1949 to \$1,524,000,000.

The import side of Canadian foreign trade shows a pattern somewhat different from exports. At the end of 1947, Canada imposed restrictions on imports from the United States and other dollar countries. This was necessary because Canada was unable to obtain sufficient dollars from exports to other areas to cover the net trading deficit with the United States. The restrictions became fully operative during 1948 and were continued into 1949 but on a constantly diminishing basis. The measures adopted contributed to a reduction in imports of United States origin from \$1,975,000,000 in 1947 to \$1,806,000,000 in 1948 and \$1,952,000,000 in 1949. At the same time, imports were fostered from the United Kingdom and other soft-currency countries. For example, Canadian imports in 1947 from the United Kingdom amounted to \$189,000,000, whereas in 1948 they reached \$300,000,000 and in 1949, \$307,000,000.

Thus, because of the post-war breakdown of the world multilateral trading system, the over-all commercial policy of the Government in 1948 and 1949 was directed to achieving a better balance and composition in Canada's trade with the dollar area and with the soft-currency area. In pursuing this policy, however, the Government always recognized that constant efforts should be made to re-establish world multilateral trade and to minimize restrictive national trading practices. As a consequence, Canada has played a leading role in the discussions of the contracting parties to the General Agreement on Tariffs and Trade signed at Geneva, Switzerland, in 1947, and in the rounds of tariff negotiations which took place at Geneva in 1949 and at Annecy, France, in 1947. These negotiations have resulted in substantial advances towards freeing the movements of the world's goods. Nevertheless, the effects of tariff reductions have often been offset by quantitative import restrictions arising mainly from the world dollar shortage.

The 1949 recession in the United States had a serious effect on the Sterling Area and European sales. This factor, together with others, caused a drastic decline in dollar reserves of the Sterling Area. To meet this situation initially, Commonwealth Finance Ministers decided in July, 1949, to reduce Sterling Area imports from the Dollar Area by 25 p.c.

As the balance of payments crisis deepened a financial meeting was called at Washington, U.S.A., in September, 1949, consisting of representatives of the United States, the United Kingdom and Canada. Shortly after this conference, sterling

was devalued 30.5 p.c. and the Canadian dollar about 9 p.c. relative to the United States dollar. The results of devaluation, which were very widespread, were felt soon after the event occurred. Devaluation, coupled with the further restrictions on imports and the late 1949 rising level of United States demand for Sterling Area raw materials, effected an almost immediate improvement in the balance of payments position of the Sterling Area. For Canada also, devaluation caused an improvement in the trading position with the United States.

### Loans to the United Kingdom and to Other Countries

The United Kingdom Financial Agreement Act approved the financial Agreement signed on Mar. 6, 1946, between the Governments of Canada and the United Kingdom. Under this Agreement, Canada extended to the United Kingdom, for the purchase of goods and services in Canada, a credit of \$1,250,000,000 to assist the United Kingdom to meet transitional post-war deficits in its current balance of payments, to maintain adequate reserves of gold and dollars, and to assume the obligations of multilateral trade.

Part II of the Export Credits Insurance Act, 1944, as amended, enabled the Governor in Council, at any time before Jan. 1, 1948, on the recommendation of the Minister of Finance and the Minister of Trade and Commerce, to authorize the Minister of Finance to enter into Agreements with foreign governments or their agencies, at their request, either to provide credits for the purchase of Canadian goods and services by them, or to purchase or guarantee securities or guarantee contractual obligations issued or undertaken by them for the purchase of Canadian goods and services.

The following Statement gives the total loans authorized and the net amounts drawn under the various Agreements. All lending operations under Part II of the Export Credits Insurance Act terminated on or before Dec. 31, 1948. Repayments of principal amounted to \$11,000,000 in 1949 and these were received from France, Belgium and China. Drawings by the United Kingdom under the United Kingdom Financial Agreement Act amounted to \$120,000,000 in 1949.

#### I.—POST-WAR LOANS AND ADVANCES TO OTHER COUNTRIES BY THE CANADIAN GOVERNMENT

(Millions of dollars)

Country	Export Credit Loans Authorized	Net Amounts Drawn <sup>1</sup>

<sup>1</sup> Net amounts drawn include interim advances as well as drawings on Export Credit Loans less repayments of interim advances and loans. All interim advances had been repaid by Dec. 31, 1949, with the exception of \$8,700,000 to the Union of Soviet Socialist Republics. Accrued interest amounting to \$19,500,000, settled by funding, has been excluded.

<sup>2</sup> Net repayment.

### The Place of Foreign Trade in the Canadian Economy

The special nature of Canadian resources and the country's geographical position have made foreign trade basic to its prosperity. Indeed, about one-quarter of Canada's gross national production is exported.

First, consider the importance of exports. The very *raison d'être* of Canadian development was export trade starting from furs and developing into a variety of products. The great primary industries of Canada, if they were to be expanded up to their maximum efficiency, required outlets much larger than the domestic market. Foreign markets became available because Canada was able to supply abundantly and cheaply the goods required for the huge industrial expansions of the twentieth century.

It is notable that Canada's bulk exports in 1948 and 1949, while derived from the same sources as they were at the time of Confederation now take many different forms. At Confederation, furs, lumber, fish and cheese were Canada's principal exports. These products are still important but others have been added: wheat and flour, pulpwood and wood-pulp, newsprint, and minerals. These latter products came later into export trade for their manufacture required heavy capital expenditures—expenditures which were not possible in the early stages of Canadian development.

It is also important to note, when considering Canadian exports, that although there has been a large expansion of the domestic manufacturing industries since Confederation there has not been an equivalent change in the export pattern. The most important exports remain those of the basic industries, but there have been some changes in the degree of processing: there is now a greater proportion of flour to wheat, more newsprint than wood-pulp or pulpwood, more metals in ingot than in ore. In addition, in recent years Canada has been an important exporter of a few secondary goods, notably agricultural machinery. Nevertheless, these changes, although of considerable importance, do not parallel the extent of the twentieth century industrialization that has taken place in Canada.

The same general circumstances govern the Canadian import pattern. Specifically, Canada imports for three reasons. The first of these is that a large volume of coal, iron ore and petroleum is needed to keep the industrial machine running. At the present rate of consumption, Canada has enough coal in Alberta and Nova Scotia to last 2,700 years. But this coal when transported to Central Canada becomes considerably more expensive than coal imported from the United States. Although Canada's import requirement of iron ore is not nearly as large as that of coal, it is still considerable. The iron-ore deposits of Quebec and Labrador will not be in production for a number of years and even then it may still be necessary for Canada to import specific types of ore. It is for reasons such as this that Canada exports ore from the Steep Rock mines of Ontario and imports other ores for domestic use. In addition, despite the developments in Alberta, Canada has not yet sufficient refined petroleum to meet its needs. Although the absence, maldistribution or under-development of these three commodities have had profound effects on Canada's foreign trade in the past, it is obvious that in the future the changes taking place in their development will also effect equally profound changes in the export and import pattern.

Secondly, Canada's location in the north temperate and sub-arctic zones means that there are many commodities, mostly agricultural in character, which Canada cannot produce: such goods as citrus fruit, natural rubber, semi-tropical grains,

cotton, tea, coffee and many others. In the early days of development the demand for these goods was quite small, but with a greater diversification of the Canadian economy, with an increasing population and with the rising standard of living of the Canadian people, imports of such commodities have become very large, although they are still smaller than the imports of coal, petroleum and iron ore.

The third reason why Canadians are heavy importers is because there are many highly manufactured goods that require a large market if their prices are to be reasonable. Such commodities, if manufactured in Canada, would be excessively more expensive than their imported equivalents. These goods, notably industrial machinery, are not made in Canada in nearly sufficient supply to meet the domestic demand, particularly in times of prosperity. Thus, in 1947, 1948 and 1949 industrial machinery was the second largest single import.

The following statement shows the principal products which Canada exported and imported in 1949:—

<i>Principal Imports</i>	\$'000,000	<i>Principal Exports</i>	\$'000,000
Petroleum and products.....	274	Wheat.....	435

## PART I.—FOREIGN TRADE STATISTICS\*

### Section 1.—Explanations *re* Canadian Trade Statistics

Certain problems of procedure arise in recording trade statistics and require explanation. For the correct interpretation of the statistics of foreign trade, it is necessary that the following definitions and explanations of terms used be kept in mind:—

*Quantities and Values.*—In all tables of imports and exports, the quantities and values are based upon the declarations of importers (import entries) and exporters (export entries), as subsequently checked by customs officials.

*Imports: Valuation.*—“Imports” means imports entered for consumption. “Entered for consumption” does not necessarily imply that the goods have been actually consumed in Canada, but that they have passed into the possession of the importer and that duty has been paid on that portion liable for duty.

Under the main provisions of the law, the value of merchandise imported into Canada is the fair market value or price thereof when sold for home consumption in the principal markets of the country from which said merchandise was exported. (See Sects. 35 to 45 and 55 of the Customs Act.)

*Canadian Exports: Valuation.*—“Canadian produce” exported includes Canadian products or manufactures, also exports of commodities of foreign origin that have been changed in form or enhanced in value by further manufacture in Canada, such as sugar refined in Canada from imported raw sugar, aluminum extracted from imported ore, and articles constructed or manufactured from imported materials. The value of exports of Canadian merchandise is the actual amount received in Canadian dollars exclusive of freight, insurance, and other handling charges.

\* Based on statistics taken from reports published by the External Trade Section, International Trade Division, Dominion Bureau of Statistics.

*Foreign Exports: Valuation.*—"Foreign produce" exported consists of foreign merchandise that has previously been imported (entered for home consumption). The value of such commodities is the actual amount received in Canadian dollars exclusive of freight, insurance, and other handling charges.

*Countries to which Trade is Credited.*—Imports are classified as received from the countries whence they were consigned to Canada. The countries whence goods are consigned are not necessarily the countries of actual origin, since goods produced in one country may be purchased by a firm in another country and thence despatched, after longer or shorter interval, to Canada. In such cases the second country would be the country of consignment, to which the goods would be credited.

Exports are credited to the country to which they are consigned.

*Discrepancies in Trade Statistics between Canada and Other Countries.*—Canadian statistics of exports are rarely in exact agreement with the import figures of her customers and similar differences occur with Canadian imports. Many factors contribute to these discrepancies, among which are the following:—

1. Differences in the system of valuation used by Canada and the systems used by other countries.
2. The element of time lag is of considerable importance where Canadian exports are concerned, particularly with bulk goods shipped to other continents. There are always quantities of goods in movement at the beginning or end of any trading period, and these affect the comparability between the two countries for the same period of time.
3. Canada's system of geographical classification, according to country of consignment, which may not be the ultimate destination of the goods.

**Imports from the United Kingdom.**—Published statistics of Canadian imports entered for consumption have always included several items that may be considered of a non-commercial character. These items are never very large in normal times but during the war years their inclusion in the total value of imports, from the United Kingdom in particular, tended to distort published data. The distinction between commercial and non-commercial imports is not always easy to establish, but three items have been segregated, as follows:—

- (a) "Articles for the use of the Imperial Army, Navy and Air Force". These imports consisted almost entirely of war equipment of various kinds for experimental purposes, training and use in Canada by the United Kingdom Government. The values applied to the articles imported under this classification were nominal and no duty was paid.
- (b) "Canadian goods returned". Before the War, this item amounted in value to several hundred thousand dollars annually. Late in 1945, however, the Government of Canada began the repatriation of large stocks of war equipment, the bulk of which was shipped from the United Kingdom. On entering Canada, they were classified as "Canadian goods returned" in the trade returns. They are not shown in the United Kingdom trade returns.
- (c) Settlers' effects, the property of immigrants.

The Statement below shows the relation of these non-commercial items to the total.

I.—COMMERCIAL AND NON-COMMERCIAL IMPORTS FROM THE UNITED KINGDOM, 1939-49

(Millions of dollars)

Year	Articles for Imperial Forces	Canadian Goods Returned	Settlers' Effects	Total Non- Commercial Imports	Com- mercial Imports	Total Recorded Imports
1939.....	0.8	0.4	0.6	1.8	112.2	114.0

<sup>1</sup> Less than \$50,000.

**Treatment of Gold in Trade Statistics.**—The fact that gold is a money metal gives it peculiar attributes that distinguish it from other commodities in trade. In particular, the movement of gold in international trade is determined, almost exclusively, by monetary factors. The amount of exports may fluctuate widely from month to month owing to other than ordinary trade or commercial considerations. In addition, gold is generally acceptable. It does not have to surmount tariff barriers and normally is assured a market at a relatively fixed price. It should also be noted that gold does not move in international trade in any direct or normal relation to sales and purchases. Changes in the Bank of Canada's stock of gold under earmark do not enter, therefore, into the trade statistics.

Statistics showing the *net* exports of non-monetary gold, including changes in stocks held under earmark, which supplement the trade figures, are given below.

## II.—NET EXPORTS OF NON-MONETARY GOLD, 1942-49

(Millions of dollars)

Month	1942	1943	1944	1945	1946	1947	1948	1949

TOTALS.....	184.4	142.0	109.7	96.0	95.8	99.3	119.0	138.9

## Section 2.—Total Foreign Trade

In considering the figures in Sections 2 to 6, reference should be made to the explanatory notes on trade in Section 1. It must be emphasized that gold imports and exports are excluded from all tables. Imports from the United Kingdom from 1940 to 1946 are distorted by the inclusion of large amounts of non-commercial items in the trade returns (see p. 885). United Kingdom figures can be viewed in proper perspective only if these non-commercial items are excluded from the recorded import statistics.

The trade of Canada for the period 1934-49 is shown in Table 1.

### 1.—Value of Total Foreign Trade of Canada (Excluding Gold), 1934-49

NOTE.—These figures are available on a calendar-year basis only since 1919; figures for the fiscal years 1868-1933 are given in the 1940 edition of the Year Book, p. 526.

Year	Imports			Exports			Balance of Trade: Excess of Exports (+) Imports (—)

## 11.—Leading Imports, 1926, 1930, 1940 and 1946-49—concluded

Commodity	1926	1930	1940	1946	1947	1948	1949
	\$'000	\$'000	\$'000	\$'000	\$'000	\$'000	\$'000
Synthetic resins and products.....	—	—	2,839	14,519	16,304	15,012	15,165
Wood, unmanufactured.....	12,698	11,029	6,934	8,586	16,628	11,484	14,908
Drugs and medicines.....	3,101	3,652	4,337	9,371	11,653	13,164	14,829
Brass, copper and products.....	11,457	13,753	6,447	9,454	13,121	12,146	14,721
Cocoa and chocolate.....	3,329	2,956	2,949	5,626	7,415	16,460	13,998
Paints and varnishes.....	4,378	4,664	5,501	9,437	13,441	14,277	13,866
Settlers' effects.....	7,367	11,755	3,516	7,726	10,935	14,030	13,527
Aircraft and parts.....	—	—	10,646	9,448	12,284	7,854	13,256
Castings and forgings.....	4,688	2,823	4,818	7,445	8,598	9,793	12,587
Hides and skins, raw.....	9,201	6,047	6,181	3,651	12,011	8,351	12,388
Leather.....	9,031	9,728	5,659	9,243	14,033	10,410	12,126
Iron ore.....	2,854	3,324	5,513	6,467	12,717	15,507	12,057
Wire and chain.....	4,084	3,337	4,452	5,563	9,413	12,653	12,008
Hardware and cutlery.....	3,760	3,740	3,203	7,431	10,388	10,144	11,650
Cooking and heating apparatus.....	652	2,026	3,028	10,462	13,647	6,828	11,547
Tools.....	2,337	2,351	4,101	10,135	11,454	10,999	11,361
Dyeing and tanning materials.....	3,654	3,372	7,265	9,209	10,415	10,117	10,294
Clocks and watches.....	3,101	2,759	3,148	7,808	9,026	5,302	9,072
Vegetable fibres.....	5,126	3,669	4,327	8,806	12,189	12,715	8,119
Scrap iron.....	956	1,223	5,797	2,163	4,197	10,454	7,917
Tin.....	3,486	1,855	6,346	6,109	6,820	7,936	7,910
Fertilizers.....	3,693	5,960	4,141	4,561	6,585	6,298	7,768
Ores of metals.....	368	283	2,169	866	3,544	4,322	7,416
Refrigerators and parts.....	—	2,101	3,870	5,201	12,134	5,816	7,342
Rags and waste.....	1,588	2,106	3,657	6,037	7,054	6,261	6,911
Diamonds, unset.....	3,036	2,015	1,915	6,104	2,986	5,275	6,155
Animal oils, fats and greases.....	2,487	2,027	1,546	4,685	13,728	11,872	5,326
Gums and resins.....	3,362	2,672	2,140	5,635	6,183	6,214	5,302
Fish and fishery products.....	2,585	3,011	2,475	4,599	5,073	5,520	5,300

## 12.—Leading Domestic Exports, 1926, 1930, 1940 and 1946-49

NOTE.—Commodities are arranged in order of importance, 1949.

Commodity	1926	1930	1940	1946	1947	1948	1949
	\$'000	\$'000	\$'000	\$'000	\$'000	\$'000	\$'000
Wheat.....	362,978	185,786	119,530	250,306	265,200	243,023	435,158
Newsprint paper.....	114,091	133,371	151,360	265,865	342,293	333,123	433,882
Wood-pulp.....	52,077	39,060	60,930	114,021	177,803	211,564	170,675
Planks and boards.....	61,943	36,743	67,737	125,391	208,375	196,023	160,420
Flour of wheat.....	71,994	37,540	26,352	126,733	196,578	125,151	97,693
Aluminum and products.....	7,140	9,930	34,325	56,030	63,956	102,046	93,998
Fish and fishery products.....	35,982	31,050	31,651	86,486	82,359	85,028	93,749
Farm implements and machinery.....	16,935	10,302	9,537	28,662	42,238	73,760	92,527
Nickel.....	12,461	20,505	61,163	55,205	60,443	73,802	92,324
Copper and products.....	15,009	31,355	52,659	37,005	59,298	79,036	86,623
Grains, other than wheat.....	39,015	3,405	10,097	44,724	50,103	75,321	64,271

## 12.—Leading Domestic Exports, 1926, 1930, 1940 and 1946-49—concluded

Commodity	1926	1930	1940	1946	1947	1948	1949
	\$'000	\$'000	\$'000	\$'000	\$'000	\$'000	\$'000
Cattle.....	13,294	3,398	12,442	18,015	14,980	73,899	61,449
Zinc and products.....	8,615	6,254	12,038	27,769	30,193	42,496	55,862
Meats, other than bacon and hams.....	8,873	3,934	4,475	62,547	40,776	63,399	43,944
Seeds.....	9,035	3,188	3,358	13,228	16,693	49,748	43,768
Ships and vessels.....	437	708	101	17,856	23,965	81,448	42,458
Lead and products.....	13,780	8,274	9,490	16,846	30,945	34,684	42,187
Fertilizers.....	4,664	5,606	8,584	32,108	34,386	36,374	39,385
Asbestos and products.....	10,705	8,653	15,833	24,481	32,960	41,979	37,298
Beverages, alcoholic.....	24,539	22,767	9,334	36,296	28,478	29,278	34,588
Machinery, except agricultural.....	4,451	6,109	13,458	15,535	41,022	40,539	31,840
Pulpwood.....	14,067	13,612	12,522	28,731	34,529	43,573	31,317
Locomotives and parts.....	37	12	89	26,981	15,672	8,792	28,112
Automobiles, freight and passenger.....	32,737	18,799	54,306	57,194	71,497	39,746	28,055
Precious metals, except gold.....	13,528	11,589	14,053	21,469	22,581	25,478	27,918
Rubber and products.....	25,970	25,243	12,950	22,477	33,125	33,151	25,780
Aircraft and parts.....	—	—	5,985	9,507	5,900	11,290	24,934
Furs and products.....	19,490	15,357	16,176	32,291	29,048	24,118	23,327
Railway cars and parts.....	57	206	40	26,342	3,368	6,593	21,945
Eggs, shell and processed.....	685	71	2,771	26,772	36,968	39,163	20,903
Ferro-alloys.....	3,413	2,694	6,007	9,485	21,545	24,057	19,182
Paper, other than newsprint.....	7,324	5,969	19,519	21,573	30,840	33,559	19,039
Shingles.....	8,752	4,132	7,606	11,211	20,254	22,370	16,803
Cheese.....	24,858	13,207	15,723	21,948	14,162	12,042	16,257
Rolling-mill products.....	2,686	1,535	6,886	7,528	10,935	23,773	15,547
Iron ore.....	7	3	924	4,353	6,023	5,801	14,117
Milk products, other than cheese.....	16,464	6,154	4,681	12,975	15,538	18,331	13,844
Cartridges.....	18	40	12,500	694	2,308	2,736	13,696
Fruits.....	7,244	10,401	5,862	15,124	14,890	11,132	13,186
Abrasives, artificial, crude.....	2,908	2,842	7,601	11,727	13,110	13,381	12,548
Vegetable fats and oils.....	166	83	578	5,346	6,497	14,726	12,368
Electrical apparatus, <i>n.o.p.</i> .....	1,695	2,291	3,283	20,939	19,135	16,822	12,293
Settlers' effects.....	7,146	5,758	2,072	9,712	11,006	12,629	10,938
Automobile parts.....	5,485	1,588	10,290	21,110	20,142	15,340	10,752
Tobacco.....	2,047	1,329	2,744	6,446	14,157	8,392	8,885
Veneers and plywoods.....	243	145	3,763	12,026	18,499	14,593	7,703
Animals, living, other than cattle.....	4,835	1,280	1,294	5,183	5,034	13,606	7,432
Pit props.....	—	—	4,086	9,174	8,135	7,612	7,250
Leather and products.....	8,591	5,522	8,000	16,938	20,320	13,019	7,229
Gifts and donations.....	—	—	4,292	30,163	10,627	9,248	7,053
Vegetables.....	13,891	9,942	5,175	13,754	17,557	9,541	6,602
Binder twine.....	1,056	1,655	1,501	3,910	3,274	4,745	5,790
Wool and products.....	1,633	1,120	1,561	18,945	8,863	12,091	5,395
Tubes, pipes and fittings.....	1,847	1,666	3,210	1,082	652	1,953	5,385
Synthetic resins.....	—	—	410	2,401	6,004	5,219	5,224
Sugar and products.....	17,643	3,274	1,643	4,120	7,650	5,826	5,170

**Detailed Imports and Exports.**—Detailed statistics of all commodities of any importance imported into Canada from all countries, from the United Kingdom and from the United States during the calendar years 1946-49 are given in Table 13 while corresponding statistics for domestic exports appear in Table 14.

## 13.—Principal Imports into Canada for Consumption from All Countries,

No.	Item	All Countries			
		1946	1947	1948	1949
<b>I. Agricultural and Vegetable Products</b>					
A. MAINLY FOOD					
Fruits—					
1	Fruits, fresh..... \$	69,587,133	51,702,628	38,806,933	46,376,684
2	Fruits, dried..... lb.	130,452,602	122,369,623	94,304,651	84,561,795
		13,921,168	13,789,199	10,372,736	9,639,734
3	Fruits, canned or preserved..... \$	3,910,639	6,171,501	5,725,810	7,686,072
4	Fruit juices and fruit syrups..... gal.	10,002,428	10,285,577	7,828,413	10,727,647
		8,077,469	5,813,481	4,655,527	8,920,845
	Totals, Fruits..... \$	95,496,409	77,476,809	59,561,006	72,623,335
5	Nuts..... \$	22,591,472	22,050,188	31,027,036	23,187,420
Vegetables—					
6	Vegetables, fresh..... \$	25,747,714	18,977,802	6,845,449	18,459,891
7	Vegetables, dried..... \$	455,507	398,776	102,727	252,922
8	Vegetables, canned..... lb.	4,502,898	31,717,971	2,251,100	292,338
		536,286	2,852,361	310,954	77,920
9	Pickles, sauces and catsups..... gal.	460,597	2,042,521	320,954	348,841
		503,037	2,592,689	264,194	393,820
	Totals, Vegetables..... \$	27,242,544	24,821,628	7,523,324	19,184,553
Grains and Farinaceous Products—					
10	Grains..... \$	15,259,716	30,580,243	27,649,298	23,179,116
11	Milled products..... \$	744,812	1,165,641	1,155,586	824,037
12	Prepared foods and bakery products..... \$	1,623,994	3,648,569	1,273,553	1,581,098
13	Other farinaceous products..... \$	2,568,665	1,058,695	486,139	273,088
	Totals, Grains and Farinaceous Products. \$	20,197,187	36,453,148	30,564,576	25,857,339
14	Oils, vegetable, for food..... \$	2,591,290	2,604,740	2,046,136	3,261,471
15	Sugar and its products..... \$	39,878,697	57,420,210	71,751,972	71,084,197
16	Cocoa and chocolate..... \$	5,626,169	7,414,541	16,459,648	13,997,722
17	Coffee and chicory..... lb.	85,848,068	52,672,136	88,286,198	98,740,143
		16,162,208	14,381,738	23,913,935	28,909,886

## 13.—Principal Imports into Canada for Consumption from All Countries,

No.	Item	All Countries			
		1946	1947	1948	1949
V. Iron and Its Products					
1	Iron ore..... ton	2,281,677	3,944,550	4,300,163	2,517,235
	\$	6,467,023	12,716,818	15,506,959	12,057,415
2	Ferro-alloys..... \$	676,927	1,657,533	1,246,017	1,063,087
3	Pigs, ingots, blooms and billets..... \$	629,241	793,655	4,470,587	5,419,791
4	Scrap iron or steel..... \$	2,162,748	4,197,477	10,453,507	7,916,619
5	Castings and forgings..... \$	7,445,409	8,598,084	9,793,469	12,587,835
6	Rolling-mill products..... \$	53,376,272	77,969,781	83,929,042	98,092,891
7	Tubes, pipes and fittings..... \$	8,411,415	13,464,380	18,598,169	28,144,786
8	Wire..... \$	3,927,855	6,556,151	9,016,453	8,506,175
9	Chains..... \$	1,635,528	2,857,312	3,636,607	3,501,410
10	Engines and boilers..... \$	29,462,014	43,882,425	50,284,809	58,697,740
11	Farm implements and machinery..... \$	68,351,742	105,404,869	139,993,374	177,210,372
12	Hardware and cutlery..... \$	7,431,482	10,388,169	10,143,978	11,650,136
13	Machinery (except agricultural)..... \$	130,286,814	206,011,544	217,090,260	216,315,663
14	Springs..... \$	785,386	188,634	179,656	104,382
15	Stamped and coated products..... \$	3,433,097	5,770,037	4,476,094	5,748,392
16	Tools and hand implements..... \$	10,135,395	11,454,000	10,998,696	11,361,189
17	Vehicles and Parts— Automobiles, freight..... No.	3,166	6,289	3,348	3,270
18	Automobiles, passenger..... No.	6,493,042	12,041,505	5,874,814	5,179,164
		19,076	36,574	17,264	35,293
19	Automobile parts..... \$	25,209,172	57,498,704	21,427,869	38,970,483
20	Other vehicles..... \$	66,453,145	98,431,717	101,261,083	117,748,417
		9,509,837	15,681,459	11,567,761	13,724,425
	Totals, Vehicles and Parts..... \$	107,665,196	183,653,385	140,131,527	175,622,489
21	Other iron and steel products..... \$	48,784,962	66,794,743	52,305,980	57,551,080
	Totals, Iron and Its Products..... \$	491,068,506	762,358,997	782,255,184	891,551,452
VI. Non-Ferrous Metals					
22	Aluminum— Bauxite..... cwt.	25,663,512	27,853,853	40,169,876	35,852,808
	\$	8,524,873	8,565,875	9,884,001	10,063,336
23	Aluminum and manufactures of, <i>n.o.p.</i> ..... \$	6,167,879	8,616,792	7,777,604	8,159,206
	Totals, Aluminum..... \$	14,692,752	17,182,667	17,661,605	18,222,542
24	Brass and manufactures of..... \$	7,316,721	10,175,400	9,733,687	12,708,260
25	Copper and manufactures of..... \$	2,137,031	2,945,611	2,412,568	2,012,480
26	Lead and manufactures of..... \$	146,004	164,904	290,858	944,248
27	Nickel and manufactures of..... \$	3,527,483	4,588,752	5,174,099	6,637,548
28	Precious metals and manufactures of..... \$	13,897,176	12,995,528	16,010,316	17,661,332
29	Tin and its products..... \$	6,108,650	6,819,533	7,936,494	7,910,326
30	Zinc and manufactures of..... \$	1,783,945	2,193,102	2,997,372	3,079,384
31	Alloys, <i>n.o.p.</i> ..... \$	1,046,065	1,282,436	1,557,752	933,931
32	Clocks and watches..... \$	7,808,075	9,026,133	5,302,153	9,071,712
33	Electrical apparatus, <i>n.o.p.</i> ..... \$	47,787,670	68,773,183	62,127,222	69,802,480
34	Gas apparatus..... \$	435,733	580,487	627,985	583,034
35	Printing materials..... \$	1,570,136	1,587,041	1,785,381	2,015,171
36	Other non-ferrous metals..... \$	12,023,964	22,611,181	22,194,475	23,109,275
	Totals, Non-Ferrous Metals..... \$	120,281,405	160,925,958	155,811,967	174,691,723
VII. Non-Metallic Minerals					
37	Asbestos and manufactures of..... \$	2,230,011	3,680,301	3,751,979	2,596,360
38	Clay and manufactures of..... \$	17,825,283	24,059,272	30,772,690	32,965,203
39	Coal and Its Products— Coal, anthracite..... ton	4,631,387	4,281,682	5,244,837	3,945,135
	\$	41,987,460	41,012,759	56,380,098	45,656,328
40	Coal, bituminous and coal, <i>n.o.p.</i> ..... ton	21,475,212	24,610,248	25,629,075	18,250,075
	\$	78,366,960	97,937,026	130,007,653	95,492,735
41	Coke..... ton	1,122,856	832,289	851,791	716,361
	\$	10,888,234	11,483,959	14,584,678	12,305,245
	Other coal products..... \$	1,839,870	3,254,834	5,254,072	3,428,972
	Totals, Coal and Its Products..... \$	133,082,524	153,688,578	206,226,501	156,883,280

## 13.—Principal Imports into Canada for Consumption from All Countries,

No.	Item	All Countries			
		1946	1947	1948	1949
<b>VII. Non-Metallic Minerals—concluded</b>					
1	Glass and manufactures of..... \$	23,258,143	28,625,643	25,925,237	25,402,867
2	Graphite and its products..... \$	601,677	591,099	532,577	505,264
3	Mica and manufactures of..... \$	280,142	571,638	407,202	567,469
<b>Petroleum, Asphalt and Products—</b>					
4	Petroleum, crude..... M gal.	2,219,365	2,417,820	2,717,306	2,648,986
	..... \$	89,546,890	128,826,670	197,140,292	193,146,495
	Fuel oil for ships' stores..... gal.	12,922,344	11,170,800	12,504,179	13,327,449
	..... \$	510,715	510,031	756,688	669,887
6	Coal oil and kerosene..... gal.	35,557,549	147,427,903	76,868,321	36,618,392
	..... \$	2,280,149	12,448,086	8,791,014	3,687,650
7	Gasoline..... gal.	176,658,361	229,086,957	322,607,355	308,005,168
	..... \$	14,911,781	25,521,588	46,461,672	45,256,493
8	Lubricating oils..... gal.	10,913,011	13,649,862	16,176,373	16,464,087
	..... \$	3,740,123	4,799,737	5,631,949	4,669,755
9	Other petroleum and asphalt products..... \$	12,753,267	35,087,685	43,001,093	27,233,324
	Totals, Petroleum, Asphalt and Products. \$	123,742,925	207,193,797	301,782,708	274,663,604
10	Stone and its products..... \$	14,676,273	18,357,343	20,084,245	23,848,651
11	Other non-metallic minerals..... \$	16,914,103	15,430,280	16,699,117	17,895,815
	<b>Totals, Non-Metallic Minerals..... \$</b>	<b>332,611,081</b>	<b>452,197,951</b>	<b>606,182,256</b>	<b>535,328,513</b>
<b>VIII. Chemicals and Allied Products</b>					
12	Acids..... \$	3,228,005	3,510,121	3,926,038	4,134,227
13	Alcohols, industrial..... \$	688,618	1,615,990	1,493,303	602,390
14	Cellulose products..... \$	6,554,324	5,456,594	4,451,472	5,653,761
15	Drugs, medicinal and pharmaceutical products..... \$	9,370,879	11,653,203	13,163,602	14,828,906
16	Dyeing and tanning materials..... \$	9,208,514	10,414,778	10,117,384	10,293,926
17	Explosives..... \$	848,186	901,654	1,139,658	1,909,771
18	Fertilizers..... cwt.	5,094,973	6,612,184	6,426,175	7,108,471
	..... \$	4,561,115	6,584,828	6,297,690	7,768,394
19	Paints, pigments and varnishes..... \$	9,436,521	13,441,471	14,276,958	13,866,352
20	Perfumery, cosmetics and toilet preparations..... \$	720,645	723,403	192,706	288,975
21	Soap, common laundry..... lb.	6,065,092	8,514,627	7,003,678	1,492,293
	..... \$	538,637	1,086,150	967,683	176,311
22	Soap, other..... \$	423,832	1,731,616	519,109	453,673
<b>Inorganic Chemicals, n.o.p.—</b>					
23	Alum and compounds of aluminum and iron cwt.	582,416	123,049	74,596	104,994
	..... \$	768,859	204,451	173,848	230,827
24	Ammonia and its compounds..... lb.	9,202,540	9,946,701	5,648,585	6,774,178
	..... \$	326,877	280,160	214,206	260,123
25	Compounds of antimony, arsenic, copper, tin and zinc..... lb.	2,679,816	2,752,973	1,851,007	3,129,026
	..... \$	197,105	241,234	154,881	265,059
26	Potash and potassium compounds, n.o.p... lb.	7,234,734	7,618,174	9,424,895	6,885,797
	..... \$	634,782	623,282	745,665	693,402
27	Soda and sodium compounds, n.o.p..... lb.	195,958,260	209,675,662	257,184,889	160,342,729
	..... \$	5,259,966	6,607,563	9,532,995	8,396,192
28	Other inorganic chemicals..... \$	5,376,377	5,830,359	7,659,213	8,687,926
	Totals, Inorganic Chemicals, n.o.p..... \$	12,563,966	13,787,049	18,480,808	18,533,529
29	Other chemicals and allied products..... \$	34,730,871	42,177,847	43,353,410	52,149,863

## 14.—Principal Exports of Canadian Produce from Canada to all Countries,

No.	Item	All Countries			
		1946	1947	1948	1949
VI. Non-Ferrous Metals					
1	Aluminum and manufactures of..... \$	56,030,039	63,955,574	102,046,428	93,997,544
2	Brass and manufactures of..... \$	3,372,923	3,874,746	4,676,723	4,279,330
3	Copper and manufactures of..... \$	37,004,791	59,298,039	79,035,584	86,623,361
4	Lead and manufactures of..... \$	16,845,519	30,944,830	34,683,751	42,187,036
5	Nickel..... cwt.	2,238,772	2,341,140	2,636,797	2,542,835
	\$	55,204,632	60,442,762	73,801,871	92,323,686
6	Precious metals and manufactures of (except gold)..... \$	21,468,727	22,580,917	25,477,574	27,917,946
7	Zinc and manufactures of..... \$	27,769,171	30,192,642	42,496,481	55,861,872
8	Clocks and watches and parts..... \$	1,260,559	1,128,915	1,179,021	723,709
9	Electrical apparatus, <i>n.o.p.</i> ..... \$	20,939,342	19,135,446	16,822,314	12,293,101
10	Printing materials..... \$	41,253	114,245	82,133	51,848
11	Other non-ferrous metals, including "Alloys, <i>n.o.p.</i> "..... \$	7,873,109	12,269,124	15,646,331	10,348,177
	Totals, Non-Ferrous Metals..... \$	247,810,065	303,937,240	395,948,211	426,607,610
VII. Non-Metallic Minerals					
12	Asbestos and manufactures of..... \$	24,480,620	32,969,263	41,979,215	37,298,349
13	Clay and manufactures of..... \$	1,051,590	1,182,900	1,508,132	1,729,272
	Coal and its Products—				
14	Coal..... ton	862,489	714,549	1,273,262	432,043
	\$	5,946,224	5,440,788	11,555,985	3,563,892
15	Coke..... ton	63,772	133,970	199,825	2,752,753
	\$	782,992	1,377,692	3,068,176	4,733,745
16	Creosote and coal-tar oils, <i>n.o.p.</i> ..... gal.	2,935,091	2,149,985	3,949,336	4,169,318
	\$	441,915	350,294	902,179	1,049,701
17	Other coal products..... \$	193,702	111,061	19,650	1,328
	Totals, Coal and its Products..... \$	7,364,833	7,279,835	15,545,990	9,348,666
18	Glass and manufactures of..... \$	1,157,769	1,953,063	1,206,524	821,373
19	Graphite, crude or refined..... cwt.	29,777	36,288	40,283	33,010
	\$	142,974	156,748	191,398	166,224
20	Mica and manufactures of..... \$	207,068	129,539	150,361	63,592
21	Petroleum and products..... \$	4,622,338	6,884,433	9,303,914	2,588,255
22	Stone and its products..... \$	15,578,358	18,531,508	20,020,505	17,251,922
23	Other non-metallic minerals..... \$	2,754,975	5,526,899	5,008,509	4,442,556
	Totals, Non-Metallic Minerals..... \$	57,360,525	74,614,188	94,914,548	73,710,209
VIII. Chemicals and Allied Products					
24	Acids..... cwt.	338,944	1,011,078	1,233,076	651,078
	\$	2,060,181	3,712,611	5,727,794	2,738,609
25	Alcohols, industrial..... \$	108,263	103,674	25,014	337,059
26	Cellulose products..... \$	253,364	514,797	320,223	84,587
27	Drugs, medicinal and pharmaceutical preparations..... \$	5,342,618	4,399,614	3,200,398	3,885,464
28	Explosives..... \$	263,934	758,854	379,131	13,378
29	Fertilizers..... cwt.	15,609,518	15,821,964	13,842,787	14,113,469
	\$	32,108,440	34,386,165	36,374,435	39,385,031
30	Paints, pigments and varnishes..... \$	4,406,735	7,346,198	6,234,618	3,604,058
31	Perfumery, cosmetics and toilet preparations..... \$	804,540	1,512,358	234,072	103,823
32	Soap..... lb.	19,902,821	11,711,348	3,168,542	1,802,059
	\$	2,103,382	1,640,368	780,870	327,962
33	Inorganic chemicals, <i>n.o.p.</i> ..... \$	8,569,984	10,407,751	10,048,906	7,171,321
34	Other chemicals and allied products..... \$	11,567,278	19,021,519	16,514,900	13,046,645
	Totals, Chemicals and Allied Products..... \$	67,588,719	83,803,909	79,840,361	70,697,937
IX. Miscellaneous Commodities					
35	Amusement and sporting goods, <i>n.o.p.</i> ..... \$	1,802,393	1,889,429	1,886,124	576,996
36	Brushes..... \$	1,143,015	1,266,785	400,271	275,270
37	Containers, <i>n.o.p.</i> ..... \$	2,620,193	5,372,558	3,149,917	2,072,749
38	Household and personal equipment, <i>n.o.p.</i> ..... \$	7,485,032	9,195,250	5,857,195	3,966,492
39	Mineral and aerated waters..... \$	41,673	1,615	9,308	4,625
40	Musical instruments..... \$	285,955	454,859	428,527	377,587
41	Scientific and educational equipment..... \$	3,105,298	5,048,224	4,746,283	3,209,690
42	Ships and vessels and materials for ships..... \$	18,821,962	25,724,244	84,264,575	42,458,261
43	Vehicles (except iron)..... \$	9,885,159	6,537,998	11,673,916	25,384,837
44	Works of art..... \$	62,939	65,073	42,076	46,043
45	Other miscellaneous commodities..... \$	50,417,955	33,153,970	32,962,266	38,745,078
	Totals, Miscellaneous Commodities..... \$	95,671,574	88,710,005	145,420,458	117,117,628
	Grand Totals, Exports..... \$	2,312,215,301	2,774,902,355	3,075,438,085	2,992,960,978

## Section 5.—Imports and Exports by Degree of Manufacture, by Origin and by Purpose

Analyses of Canada's trade, from the angle of degree of manufacture of imports and exports with leading countries, are of value to the student of economic relationships because they present, in summary form, details with significant meaning in the complementary relationship of manufacturing and commerce between continents and countries.

The data of Tables 15 and 17 have been specially tabulated to show at a glance this information for all countries of any importance that trade with Canada. Table 16, on the other hand, gives historical statistics that clearly indicate the fluctuations in imports for home consumption of important raw materials used in Canadian manufacture, irrespective of their source. In a broad way, the data reflect the development of Canadian manufactures, although the industrial expansion for the purposes of war must be borne in mind in using the figures for the past decade.

<sup>1</sup> In this classification the expression "Canadian Farm Products" refers, in the case of exports, to commodities actually produced, in their original state, on Canadian farms. In the case of imports, it covers all commodities of which the basic raw materials are such as Canadian farms produce. "Foreign Farm Products" covers, in both imports and exports, materials or commodities such as Canada does not produce in their original forms, e.g., cane sugar, tea, rubber, cotton, silk, etc.

## Section 6.—Comparison of Value, Price and Volume of Foreign Trade\*

Since value figures alone are somewhat misleading when used to show the physical growth of foreign trade, the fluctuations in the volume of the country's trade as distinguished from its value should be taken into account. Changes in the value of imports and of exports over a period may be caused by variations in quantities, by fluctuations in prices or by a combination of both these factors. It is desirable, therefore, to isolate each of the two factors of price and quantity in order to observe the relative effects of their movement apart from the combined effect displayed by published trade figures. New interim indexes of prices of imports for consumption and of exports of domestic produce have been constructed at the Dominion Bureau of Statistics to serve this purpose. Such an index of prices when divided into an index of trade values can be said to 'deflate' the trade totals according to that proportion of the value level caused by price-level change. The resulting index is an index of the physical volume of trade which is a measure of the quantum of the current-year trade in terms of the base-year prices.

The Dominion Bureau of Statistics first published value-volume comparisons based on 1914 and worked back to that year. After 1929 comparisons with the pre-war year were discontinued and the year 1926 was accepted as being more representative of existing conditions. Following the depression of the early 1930's the base year 1936 was used for similar reasons and comparisons were worked back to

\* A detailed analysis of the new value-volume comparison indexes is given in the "Review of Foreign Trade" published by the Dominion Bureau of Statistics in 1950.

1932, and published at pp. 583-585 of the 1938 edition and in later Year Books. Comparisons on the 1936 base were continued to 1939 when a broader base (1935-39 = 100) was established. Indexes on this base are given in the 1946 Year Book and were compiled back to 1935. It was then felt that the value-volume calculations would benefit by some refinement in statistical method. In the intervening years, the problems of pricing and commodity classification had been studied and a system devised by which values, value indexes and the resultant volume indexes could be grouped on a comparable basis—a very important consideration affecting the integrity of the indexes. For this reason the publication of value-volume comparisons ceased after 1945 when the refinements were being applied. Indexes prepared by means of the revised method were published on a 1938 base in the 1950 Year Book. Indexes for post-war calendar years, however, have now been recompiled on a more recent base (1948 = 100) and are given in Table 19.

**19.—Declared Values, Prices and Physical Volume Indexes of Foreign Trade, by Commodity Groups, 1946-49**

<sup>1</sup> Groups, though classified by component material, differ slightly from conventional groups (see text, p. 925). <sup>2</sup> Excludes imports for the use of the United Kingdom Government, temporary imports for exhibition or competition, and monetary and non-monetary gold. <sup>3</sup> Excludes exports of foreign produce, temporary exports for exhibition or competition, and monetary and non-monetary gold.

The relative significance of changes in price and volume of exports and imports in 1949 as compared with 1948 may be appraised from the following statement of aggregates:—

Item	1948	1949	Increase(+) / Decrease(—) in Value	P.C. Change in—	
	\$'000,000	\$'000,000		Price	Volume
Exports of Canadian Produce <sup>1</sup> .....	3,075	2,953	- 82	+ 3.1	- 5.6
Imports for Consumption <sup>1</sup> .....	2,635	2,759	+ 114	+ 3.2	+ 1.5

<sup>1</sup> Totals adjusted according to the price indexes (see footnotes 2 and 3, Table 19).

The levels of these import and export price indexes indicate slight change in the net 'barter terms' ratio in 1949. Prices of exports increased, on the average, at a rate similar to that of import prices, notwithstanding currency readjustments in September, the effect of which when distributed over the calendar year was slight. Assuming that 100 units of exports of Canadian produce would have purchased 100 units of imports for consumption in 1948, this 100 units would have obtained 99.9 or approximately the same number of units in 1949. The significance of this ratio is limited, however, by the neglect of re-export prices in its calculation.

Comparisons have not been made in detail with a pre-war period due to the limitations of fixed base weighted indexes at extended time-distance from the base period. From 1938 to 1949 exports increased in volume by over 60 p.c. and imports by over 80 p.c. The following statement summarizes these changes:—

<i>Item</i>	<i>1938<sup>1</sup></i>	<i>1949</i>	<i>P.C. Change 1949 over 1938</i>

## PART II.—EXTERNAL TRANSACTIONS\*

### Section 1.—Canadian Balance of International Payments

Wide fluctuations have been a particularly prominent feature of the Canadian balance of payments in recent years. These fluctuations have been widest in the bilateral accounts with the United States and with the United Kingdom and other overseas countries.

The current surplus with all countries (excluding official contributions) has fluctuated from a low level of \$47,000,000 in 1947 to \$452,000,000 in 1948 with a decline in 1949 to \$180,000,000.

The widest change in the disequilibrium in the bilateral accounts occurred when the current deficit with the United States dropped from \$1,135,000,000 in 1947 to \$393,000,000 in 1948 and changed again to \$594,000,000 in 1949. There followed, however, another rapid reduction in bilateral disequilibrium in the latter months of 1949 and in the first half of 1950. This resulted principally from a sharp expansion in exports to the United States accompanied by some reduction in imports from that country in the second half of 1949.

Changes in the direction of Canadian trade have been a predominant influence on these fluctuations. The volume of exports to the United States expanded sharply in 1948 when embargoes and other controls on exports to that country were removed. Early in 1949 changing business conditions in the United States resulted in reduced demand which revived again in the latter part of the year and remained very strong at the opening of 1950. The restrictions imposed in November, 1947, under the Emergency Exchange Conservation program, led to reductions in the volume of imports from the United States, in 1948 particularly. Certain relaxations of these restrictions together with improving supplies in the United States and strong Canadian demands made for a higher volume of imports in some groups of commodities in 1949. In the latter part of the year, however, the volume of imports was generally lower due to some softening in Canadian demands and interruptions in United States supplies.

\* Prepared in the International Payments Section, International Trade Division, Dominion Bureau of Statistics.

While the deficit with the United States was declining the current surplus with overseas countries was reduced sharply from \$1,220,000,000 in 1947 to \$774,000,000 in 1949. Part of this reduction occurred in the current account with the United Kingdom where the surplus declined from the post-war peak of \$633,000,000 in 1947 to \$486,000,000 in 1948 and \$443,000,000 in 1949. When the deficit with the United States was reduced in the first half of 1950, a basic change took place in commodity trade with the United Kingdom: exports to that country declined while imports rose. The same trend was in evidence to a marked degree in trade with other Sterling Area countries and also in trade with the rest of the world. But the decline in exports overseas was made up generally by the rise in exports to the United States in the first half of 1950.

While these variations in the current account surplus have had direct effects on the size of Canada's official reserves of gold and United States dollars, capital movements between Canada and other countries have also been a major influence. There was a decrease of \$743,000,000 in the official reserves in 1947 and gains of \$496,000,000 and 119,000,000 United States dollars, respectively, in 1948 and 1949.\* The official reserves of gold and United States dollars, which had been only \$501,700,000 at the end of 1947, had risen to \$1,117,100,000 by the end of 1949. The major influence on the decline in 1947 originating in the capital account was the large total of export credits extended by the Canadian Government to other governments, the net drawings on which in that year amounted to \$563,000,000. There were also heavy redemptions of Canadian securities owned abroad and Canada's contribution to the International Monetary Fund during 1947. In 1948, on the other hand, capital inflows contributed to the reserves, together with the sale of the Canadian Government issue of \$150,000,000 in the United States. The principal factor contributing to the small capital outflow in 1949 was the drawings of \$120,000,000 on the Canadian loan to the United Kingdom. The net outward movement of capital in 1949, apart from the rise in official reserves, was \$43,000,000 and compares with a net inward movement of \$40,000,000 in 1948.

**Transactions with the Sterling Area.**—The current surplus from Canadian exports of goods and services to the Sterling Area was only moderately lower in 1949 than in 1948 but substantially lower than in the post-war peak in 1947. The declines from the peak occurred in the surplus with the United Kingdom and with other Sterling Area countries. The drop between 1948 and 1949 was all in the surplus with the United Kingdom as a slight increase appeared in the surplus with the rest of the Sterling Area. The current account surplus of \$578,000,000 which Canada had with the Sterling Area in 1949 compares with \$874,000,000 in 1947. The distribution between the accounts with the United Kingdom and the rest of the Sterling Area was \$443,000,000 and \$135,000,000, respectively, in 1949, and compares with \$633,000,000 and \$241,000,000 in the same accounts in 1947.

The comparative stability between the years 1948 and 1949 was due to a number of special factors that operated to maintain the surplus in 1949. Thus, the value of exports in 1949 included a larger volume of wheat sold at a higher price than in 1948 and larger exports of aluminum, nickel and aircraft. At the same time substantial declines occurred in other significant exports such as bacon, eggs, flour and lumber. Total exports to the rest of the Sterling Area actually increased as there were extraordinarily heavy shipments of wheat, locomotives and railway equipment to

\* The figures in Table 5, p. 934, are Canadian dollar equivalents. In 1947 and 1948 the Canadian dollar was at par with the United States dollar.

British South Africa and India concentrated in 1949 which did not recur in 1950. This type of export offset sharp declines in Canadian exports to other parts of the Sterling Area such as the British West Indies. By the first half of 1950 the export balance had been greatly reduced.

There was only a moderate rise in Canadian imports from the United Kingdom in 1949. The largest increases were in automobiles and other metal products, partly offset by reduced imports of other commodities, particularly certain types of textiles. Supplies of commodities in the United Kingdom continued to be limited in relation to the exceptionally heavy demands in the Sterling Area and elsewhere. The most notable change in imports in 1949 from the rest of the Sterling Area was a diversion of sugar purchases to Commonwealth countries; this increase was offset by declines in some other commodities like jute and rubber. Following the devaluation of sterling in September, 1949, the volume of imports increased in the later months of the year and in early 1950.

The above changes in the commodity trade with the United Kingdom led to a reduction of only \$15,000,000 in the export balance for 1949. Most of the reduction of \$43,000,000 in the current account surplus with the United Kingdom occurred in other current items. Prominent among these changes were declines in receipts from freight and shipping transactions and in transfers of immigrants' funds to Canada. The decline in receipts from shipping transactions was due to reduced expenditures in Canadian ports by British ships and lower revenues of Canadian shipping companies carrying exports to the United Kingdom. The decline in immigrants' funds reflected the sharp reduction in the volume of immigration combined with the effects of British restrictions on transfers by immigrants introduced in 1948. There were appreciable increases in the travel expenditures of Canadians in the United Kingdom, in interest and dividend payments to investors there, and in transfers of emigrants' funds and inheritances from Canada. The expenditures of Canadian travellers in the United Kingdom rose by one-third over the previous year.

The principal special means of financing the British deficiency in Canada has been the Canadian loan of \$1,250,000,000 on which drawings to the end of 1949 totalled \$1,135,000,000. Drawings on this loan, which had been heaviest in 1946 and 1947, were limited in 1949 to \$120,000,000. They continued at the same rate of \$10,000,000 a month in the opening months of 1950.

All other capital movements were inward on balance in 1949, due to a large increase in Sterling Area balances in Canada. Repayments on the 1942 loan of \$5,200,000 were much less than in preceding years: there remained \$298,900,000 of this loan outstanding at the end of 1949.

The other major means of financing the deficiency has been through the receipt of gold and convertible exchange from the Sterling Area. Receipts in the three years from 1947 to 1949 totalled \$1,589,000,000, most of which was received on United Kingdom account. Total receipts of convertible exchange on Sterling Area account in 1949 were \$487,000,000.

**Transactions with the United States.**—The sharp increase in the current deficit with the United States was the principal change in Canada's current account in 1949. This deterioration was due to many factors, the chief of which was an increase in the merchandise deficit, which accounted for \$89,000,000 of the rise of \$201,000,000 to a total of \$594,000,000.

The increase in the merchandise deficit was due entirely to the rise in the value of imports as the value of exports was slightly higher. The divergence of economic conditions in Canada and the United States was the principal factor influencing this trend. There was a reduction in United States demand in the first part of the year while Canadian demand was maintained throughout most of the year.

The total volume of exports to the United States was maintained in 1949 as a whole but showed divergent trends in different groups of commodities and in different parts of the year. Among the groups that were higher in value were metals, agricultural implements, agricultural and vegetable products and newsprint. Notable declines occurred in wood-pulp and certain types of lumber. For the year, exports to the United States amounted to slightly more than one-half of the total value of all Canadian exports, the highest ratio on record.

The increase in the volume of imports from the United States for 1949 was influenced by relaxation of certain restrictions, by higher prices, and by improving supplies of commodities. Demand was strong in the early part of the year but in the later months strikes in the steel and coal industries in the United States led to interruptions in supply which affected the volume of Canadian imports.

More than one-half of the increased current deficit with the United States in 1949 was due to non-merchandise transactions, the deficit from which increased by \$112,000,000 to \$216,000,000. The most important contributing factors to this deterioration were the decline of \$48,000,000 in net receipts from international tourist expenditures, an increase of \$55,000,000 in net payments on income account, and an increase of \$38,000,000 in net payments for all other types of miscellaneous current transactions. The only favourable trends in major groups were the increase in the value of gold production of \$20,000,000 and a drop of \$9,000,000 in net payments on freight and shipping account.

The decline in the net receipts on international travel account was due to a 45 p.c. rise in the expenditures of Canadians in the United States, more than one-half of which was spent on purchases facilitated by relaxations of import prohibitions. At the same time expenditures of United States travellers in Canada showed little change as compared with 1948. An increase in the number of motorists from the United States in the longer-term category was mainly offset by reduced expenditures by local short-term visitors. The principal change affecting the increase in the deficit on income account was the growth in the total of dividends paid by United States companies to the United States which rose to a new peak of \$242,000,000 in 1949, mainly due to the large dividends paid by Canadian subsidiaries to parent companies in the United States. The larger deficit on account of miscellaneous current transactions was affected particularly by a change in statistical practice following the entry of Newfoundland into Confederation. Part of the increase in the value of gold available for export followed the higher price accompanying the devaluation of the Canadian dollar in September, although a larger production throughout the year also contributed to the increase. Most of the improvement on freight and shipping account can be traced to the smaller payments to United States railroads because of the reduced volume of imports of coal during the year.

**Transactions with Other Countries.**—The principal change during 1949 in the current account between Canada and other countries belonging to the Organization for European Economic Co-operation was a decline of \$40,000,000,

to \$187,000,000, in the current surplus due to a contraction in exports. The sharpest declines occurred in exports to France, Italy and the Netherlands, and a large part of the drop was due to reductions in deliveries of ships to France—an item that was exceptionally high in 1948. Lower earnings of Canadian shipping companies carrying exports to these countries were offset by interest receipts on export credit loans.

Only a small part of the current balance with these countries was financed by capital movements from Canada in 1949. Comparatively small outflows of capital arising from liquidations of direct and other investments in Canada, redemptions of Canadian securities, and a decline in balances in Canada were partly offset by repayments by the overseas governments of principal on export credit loans. Consequently, most of the current account surplus in 1949 was settled by transfers of convertible exchange to Canada.

Transactions with the remaining group of foreign countries continued to be close to equilibrium in 1949 although with individual countries and regions within the group there were varying degrees of disequilibrium.

**Capital Movements with the United States Dollar Area.**—Capital movements between Canada and the United States were inward on balance in 1949 as in 1948. The inflow of private capital was larger in 1949 but the total net inflow in 1948 was greater because of the sale in the United States of a Government of Canada issue of \$150,000,000. A change occurred in the direction of international trading in securities resulting in net sales of outstanding securities to the United States in 1949 compared with net purchases by Canada in 1948. In addition, in 1949 inflows for direct investment were heavier as various developments of Canadian resources being financed by United States capital proceeded. While total redemptions of Canadian securities owned in the United States were greater in 1949, part of these was financed by the sale in that country of the Government of Canada issue.

## Section 2.—Tourist Trade Statistics

Canada's tourist trade represents the economic disposition of assets in which she is particularly rich. From the pastoral beauty of the land of Evangeline to the majestic grandeur of the Rockies each province possesses distinctive attractions. Many seashore retreats, countless inland lakes and rivers, vast areas of virgin woodlands, and a climate varying from summer heat to vigorous northern winter provides unsurpassed facilities for healthful recreation. The significance of travel between Canada and other countries in the Canadian balance of international payments is shown in Tables 3-5.

In 1949, little change from the previous year was shown in expenditures of travellers from other countries—the total at \$286,500,000 being 2 p.c. higher than the record established in 1948. Of this amount, \$268,500,000 originated in the United States and the greater part of the balance of \$18,000,000 came from the United Kingdom. In both 1948 and 1949 travel expenditures, when adjusted for changes in the Canadian cost-of-living index, were slightly lower than in the year before—the peak year for the adjusted series being 1947.

During recent years expenditures of travellers from the United States and expenditures of travellers from overseas countries have followed divergent trends. In each case expenditures have risen year by year from 1946 to 1949 but, while the gain in overseas expenditures has been at a fairly constant rate, the gain in United States expenditures has become progressively smaller. In 1949, in spite of currency restrictions imposed by many overseas countries, expenditures of overseas travellers were 39 p.c. higher than in the year before. At \$18,000,000 they were the highest ever recorded and exceeded those of 1948 by \$5,000,000. On the other hand, expenditures by travellers from the United States increased by only \$1,000,000. These figures reflect changing conditions in transportation facilities. Highway traffic between Canada and the United States made a comparatively rapid recovery in the post-war years with the return of unrestricted sales of gasoline and tires and the production of new cars. The rehabilitation of ocean shipping, however, was a lengthy operation and, had it not been for the rapid growth of transatlantic air service, overseas traffic would not have recovered as quickly as it has. Compared with the pre-war year of 1937, travel receipts from the United States have increased by 80 p.c. whereas those from overseas countries have grown by only 6 p.c.

The increase of \$6,000,000 in the expenditures of non-resident travellers in Canada in 1949 was offset by the gain of \$57,000,000 in expenditures of Canadian travellers in other countries. The drop in net receipts from all countries was 35 p.c. and in those from the United States alone 32 p.c. However, the credit balance with the United States still remained substantial. During the past 20 years net receipts from United States travellers have never been less than \$50,000,000 a year and have exceeded \$100,000,000 on three occasions. During the 20-year period they have totalled more than \$1,500,000,000.

**United States Travel Expenditures in Canada.**—The increase in importance of short-term traffic from the United States which characterized the year 1948 was not continued in 1949. In 1948 expenditures arising out of visits of less than 48 hours constituted 24 p.c. of all United States travel expenditures in Canada, contrasting with a narrow range between 18 and 19 p.c. in the three preceding years. In 1949 this percentage dropped again to 19 p.c. Expenditures of these travellers rose from \$28,200,000 in 1947 to \$45,900,000 in 1948, a gain of 63 p.c., only to drop again to \$32,200,000 in 1949. The explanation is that many Americans living in border communities took advantage of lower prices and better supplies in Canadian meat and grocery shops in 1948. Price levels, however, commenced to decline in the United States in the autumn of 1948 and continued to drop during the first half of 1949, whereas Canadian prices remained relatively stable. If shopping visits are disregarded, the gain of \$26,000,000 in total United States expenditures in 1948 receives a substantial cut and the gain of \$1,000,000 in 1949 is raised by the same amount.

The increase of \$1,000,000 in United States travel expenditures in 1949 was accompanied by a decrease of almost 1,000,000 in the number of non-residents entering Canada from the United States for short visits, hence average expenditure per person increased slightly in 1949. The small gain in total expenditures of motorists was principally due to an increase of 9 p.c. during the year in the number of vehicles admitted on customs permits for longer visits. Travellers entered Canada from the United States by train, bus, boat and plane in smaller numbers in 1949 than in 1948, but heavier spending by bus and aircraft passengers resulted in higher total expenditures for this group. Travellers, other than those mentioned above, decreased in number and in average expenditure per person.

**Canadian Travel Expenditures in the United States.**—Canadian travel expenditures in the United States have increased in each year since 1942 with the exception of 1948, the drop in the latter year being caused by restrictions introduced as part of the Emergency Exchange Conservation Program in November, 1947. The removal of certain of these restrictions in January, 1949, resulted in a sharp increase during the ensuing year. More than one-half the increase was due to purchases declared under the \$100 customs exemption, which totalled \$29,000,000 in 1949 as against only \$300,000 in 1948.

In 1949 expenditures of Canadian travellers returning from the United States by automobile were more than twice those of the year before, and for the first time on record were greater than expenditures of persons travelling by train. The volume of longer-term motor traffic in 1949 was 66 p.c. higher than in 1948, the greater part of which was concentrated at Fort Erie, Niagara Falls, Windsor and Pacific Highway. The increase through these four ports was 165 p.c. while at all other ports of entry the gain was only 38 p.c.

Expenditures of travellers returning from the United States by train, bus and boat were from 25 to 30 p.c. greater in 1949 than in 1948 but did not reach 1947 levels. Expenditures of aircraft passengers increased by 32 p.c. to reach a new high level. Pedestrians and other types of travellers spent 13 p.c. more than in the year before.

**Travel between Canada and Overseas Countries.**—Travel between Canada and overseas countries normally produces a debit balance; in 1949 this balance stood at \$10,000,000, or \$1,000,000 higher than in 1948.

Expenditures in Canada by overseas travellers in 1949 reached a record of \$18,000,000 (including transportation costs paid to Canadian carriers). The number of visitors arriving by way of Canadian ports was 20,200, of whom 12,600 or 62 p.c. were from the United Kingdom and 1,886 from Newfoundland during the three months prior to Union. In addition, an estimated 16,500 persons arrived via United States ports, making a total volume of 36,700 persons. The reduction of 2,100 compared with 1948 is mainly due to the influence of Newfoundland which became a province of Canada on Mar. 31, 1949. Arrivals from countries other than Newfoundland increased substantially in 1949, the increase being 48 p.c. in residents of the United Kingdom and 50 p.c. in residents of other countries.

Canadian travel expenditures in overseas countries (including cost of passage paid to non-Canadian carriers) totalled \$28,000,000, the highest in 22 years. The number of Canadian residents returning via Canadian ports after visits to overseas countries was 40,500. Those returning from countries other than Newfoundland, numbering 38,400, can be compared with 25,900 in 1948, an increase of 48 p.c. Canadian travellers visiting overseas countries via the United States are estimated at 8,000 in 1948 and 8,500 in 1949, resulting in a total for 1949 via Canadian and United States ports of 49,000. Travel to Bermuda and the West Indies was particularly heavy.

### 6.—Expenditures of Foreign Travellers in Canada and Canadian Travellers Abroad, 1948 and 1949

**Tourist Information.**—Tourist information is supplied generally by the Canadian Government Travel Bureau, Ottawa, while detailed information on the National Parks and historic sites may be obtained from the Department of Resources and Development, Ottawa. For advice regarding specific provinces or particular cities or resorts, the tourist may apply to the provincial or municipal bureau of information concerned. (See under 'Tourist Trade', Directory of Sources of Official Information, at end of this volume).

## PART III.—THE GOVERNMENT AND FOREIGN TRADE

### Section 1.—Foreign Trade Service and Associated Agencies Concerned with the Development of Foreign Trade\*

Foreign trade contributes substantially to the welfare and prosperity of Canadians, due largely to the fact that the productive capacity of Canada is greater than the ability of her population to consume the output of farms, factories, forests, fisheries and mines. Every effort is made, therefore, to establish and maintain close commercial relations with other countries whose markets are essential to the Canadian economy. It is appreciated, however, that two-way trade should be encouraged, in order that goods and services may be accepted in partial payment for the products Canada is in a position to export. Furthermore, many commodities that are not indigenous to this country have to be imported from abroad. Some of these are required for Canadian industrial processes and others may be classed as consumer goods, necessary for the maintenance of a high standard of living.

Although many private firms have established connections in other countries that enable them to maintain a steady flow of goods in either direction, others require the assistance of government agencies in finding markets or sources of supply. Import and export controls, imposed by many countries for a variety of reasons, together with post-war foreign exchange difficulties, present problems that no single firm or even an association of manufacturers, exporters or importers can solve without assistance on the part of government representatives.

The Department of Trade and Commerce and associated agencies are at the disposal of exporters and importers, engaged directly in the development of Canada's commercial relations with other countries. Services obtainable from the various branches, divisions and agencies are described as follows.

**Canadian Trade Commissioner Service.**—The Canadian Trade Commissioner Service might be defined as the sales department of the Foreign Trade Service. Headquarters is at Ottawa and there are 46 offices in 37 Commonwealth and other countries. The organization seeks to place Canada in as many world markets as possible. The work of the Trade Commissioners in the field is co-ordinated at Ottawa by four global areas headed by area chiefs. The area officers are familiar with every aspect of foreign trade in their geographical or political areas and are responsible to the Director of the Division for the presentation of official information on all trade matters in their respective territories.

Trade Commissioners bring together exporters and importers of Canada and other countries. They study potential markets for specific Canadian products, report on the exact kind of goods required, competitive conditions, trade regulations, tariffs, shipping and packaging regulations. Inquiries for Canadian goods are passed

\* Prepared in the several branches concerned and collated in the Information Division, Department of Trade and Commerce, Ottawa.

to Ottawa or directly to interested Canadian firms. For the Canadian importer, Trade Commissioners seek sources of raw materials and other goods wanted in Canada, and give assistance to the foreign exporter who wishes to market his products in Canada.

In countries where Canada maintains a diplomatic mission as well as a trade office, Trade Commissioners form an integral part of the mission and assume the titles of Commercial Counsellor or Commercial Secretary. In some foreign countries they also act as Consuls or Vice-Consuls, according to their status as Foreign Service Officers. To refresh their knowledge of the Canadian industrial picture as a whole, tours of Canadian industrial centres are arranged from time to time for Trade Commissioners. Contacts with Canadian exporters and importers are made or re-established, and the Trade Commissioners are given an opportunity to pass on information regarding the trade conditions and potentialities of their territories directly to those most concerned.

Trade Commissioner Offices are located in the following countries: Argentina, Australia (Sydney and Melbourne), Belgian Congo, Belgium, Brazil (Rio de Janeiro and São Paulo), British West Indies (Jamaica and Trinidad), Chile, China, Colombia, Cuba, Egypt, France, Germany, Greece, Guatemala, Hong Kong, India (Bombay and New Delhi), Ireland, Italy, Japan, Mexico, the Netherlands, New Zealand, Norway, Pakistan, Peru, Philippine Islands, Portugal, Singapore, South Africa (Johannesburg and Cape Town), Spain, Sweden, Switzerland, Turkey, United Kingdom (London, Liverpool and Glasgow), the United States (Washington, New York and Los Angeles), and Venezuela. Canadian representatives of the Department of Trade and Commerce are attached to the Canadian Military Mission in Germany and the Canadian Mission in Japan. There are also regional offices at Vancouver and St. John's to assist exporters and importers in Western Canada and Newfoundland.

**Commodities Branch.**—Commodity trade promotion is the responsibility of the Commodities Branch which, through the Export and Import Divisions, co-ordinates the work of the commodity specialists in the following sections: Automotive, Agricultural and Construction Equipment; Chemicals, Oils and Minerals; Fish and Fish Products; Imported Foods; Machinery and Metals; Textiles, Leather and Rubber; Wood and Wood Products; and a wide range of general products.

The commodity officers specializing in these various fields maintain contact with industry and the trade generally by personal visits and exchange of correspondence. They also maintain contact with conditions abroad by communication with Canadian Government Trade Commissioners through the facilities of the Export and Import Divisions. It is the function of the Export Division to direct the attention of Trade Commissioners to supply conditions in Canada and, in turn, to relay market news received from Trade Commissioners to Canadian manufacturers and exporters. Similarly, it is the function of the Import Division to obtain information on foreign supply conditions and to direct the attention of Trade Commissioners to requirements in the Canadian market. The Export Division pays close attention to opportunities for developing sales abroad of Canadian products, and informs exporters about regulations governing foreign trade. The Import Division is concerned particularly in locating advantageous sources of supply of materials and manufactures and in promoting Canadian interests in international commodity markets.

The Export Division maintains an Exporters' Directory, in which there are listed Canadian firms and details of products they are in a position to sell abroad. This Directory is confidential and copies are supplied to Canadian Government Trade Commissioners, thereby enabling them to furnish foreign buyers with the latest information concerning products available in Canada.

The Import Division maintains a somewhat similar Importers' Directory. It also maintains a Canadian Trade Services Directory, containing information concerning Canadian customs requirements, invoicing, packaging, merchandising, forwarding facilities, steamship rates, rail transportation and marketing data. This Directory enables Canadian Government Trade Commissioners to obtain recognition for Canada as an organized market, and to facilitate the establishment of closer relations between Canadian importers and their foreign connections.

Related services, rendered by the Transportation and Communications Division, are administered by the Commodities Branch, together with the following control agencies: Export Permit Division and the Emergency Import Control Division.

The Transportation and Communications Division facilitates the shipment of merchandise from the point of origin to its ultimate destination. Liaison is maintained with railways, steamship operators and agents, marine insurance companies, forwarding firms and brokerage houses. Policies initiated by foreign governments, as these affect the movement of Canadian goods, rates and regulations established by private steamship companies and the pattern of Canada's foreign trade are kept under constant review.

The Export Permit Division administers controls on the export of scarce commodities, strategic commodities and items subject to government arrangement. Scarce commodities are subject to constant scrutiny, in order that they may be removed from control as soon as supplies are adequate. Through the operations of this Division, it is possible to control the export of arms, ammunition, implements of war, atomic energy materials and other strategic items. Controls are maintained on building materials in order to ensure a high level of construction in Canada. Controls are also maintained on certain food products as a means of recovering on export the freight assistance and equalization fees involved.

The Emergency Import Control Division administers Schedule III of the Emergency Exchange Conservation Act, pertaining to a specified list of capital goods and production material. Following the decline in Canada's official holdings of gold and United States dollars, it was decided in November, 1947, to curtail imports of products for which a domestic or alternative source could be found. The first objective is to stimulate the manufacture in Canada of goods normally imported from the United States, where Canadian costs are low and production is economic. The second objective is to increase the export of products from Canada's primary and secondary industries, with emphasis on the degree of processing in this country. Another objective is to assist in the modernization of Canadian industry and to encourage the establishment of a more highly integrated Canadian economy. Efforts are being made to reduce the United States content of many Canadian products, particularly those made by foreign-owned branch plants. These plants are being encouraged to export more parts and finished products either to their parent company or to other foreign markets. The administration of Schedule III is carried on by three Divisions. The Projects Division deals with the expansion of existing facilities and the construction and equipment of new industrial projects

requiring imports of capital goods. A "Projects Authorization", when approved, provides assurance to persons considering a project or already having a project under way that individual import permits for goods required to complete a project will not be withheld, if suitable alternatives are not available from Canadian sources of supply at the time import permits are requested. The Allotment Division provides annual permits to cover imports under a group of specified tariff items. A continuous pattern of imports, either of production material or of component parts used by Canadian manufacturers has thus been established. These permits are also issued to wholesale and retail distributors handling a steady flow of partly and fully manufactured commodities. The Capital Goods Division considers applications for import permits covering goods that do not follow any particular pattern of importation, and for which it is not possible to provide allotment permits on an equitable basis. Applications are refused if the goods in question are available from Canadian sources or are not considered essential to the Canadian economy.

**Agricultural Commodities Branch.**—The Agricultural Commodities Branch, established in December, 1949, is organized to render better service to the agricultural industry through closer co-ordination of the activities of the Department of Trade and Commerce in so far as they relate to Canada's foreign trade in agricultural products, wheat and coarse grains excepted.

The development of foreign markets for Canada's agricultural surpluses is the chief concern of the Commodity Section of the Branch. Working in concert with Canadian exporters and Canadian Trade Commissioners, this Section assists the agricultural industry in maintaining export outlets in those countries that were important in the past, and in seeking new outlets in other areas.

Agricultural information from foreign fields is of inestimable value in assessing future prospects for trade in agricultural products. The Analysis and Development Section of the Branch, in co-operation with the Department of Agriculture, arranges for regular reports from many countries and also directs inquiries to the Canadian Trade Commissioners for information on all aspects of economic significance in this field, including such things as production techniques, market trends, prices and agricultural legislation. The Section reviews and analyses incoming material and makes it available to interested government departments and the trade. The Department of Agriculture is kept fully informed on foreign agricultural developments and distributes much of the information thus collected to provincial governments, trade associations, and to the general public.

The Branch carries out its functions through close liaison with other Branches and Divisions of the Department of Trade and Commerce and the Department of Agriculture. It co-operates with the Trade Commissioner Service in the recruitment, training, and placement of agricultural officers in the Foreign Trade Service and directs their operational activities.

**Economic Research and Development Branch.**—The Economic Research and Development Branch consists of four divisions, as follows: (a) Economic Research Division, (b) Industrial Development Division, (c) International Trade Relations Division, and (d) Economic Forecasting Division.

*The Economic Research Division.*—This Division is concerned with domestic developments covering the activities of Canadian industry, regional business conditions, and the effect of varying levels of private and public investment upon employment and income in Canada. The Division undertakes forward-looking

appraisals of market prospects for specific commodities and industries, covering such aspects as production, exports, imports, sales, inventories, employment, investment, costs and prices. Regional analyses include appraisals of employment and income and development opportunities as they vary in the different parts of the country. In the investment field forecasts of likely levels of private and public investment are prepared and the varying effects of investment on business conditions appraised.

*The Industrial Development Division.*—This Division co-ordinates the assistance offered by the Federal Government in the establishment of new industries in Canada. Acting in this capacity, the Division provides information on a multiplicity of matters pertaining to industry establishment, and assists in solving the variety of particular problems which Canadian and foreign businessmen encounter.

The Division also aids those established firms that wish to expand into new lines of production. Inquiries from foreign firms and individuals regarding the manufacture of products in Canada under licence or royalty are screened and brought to the attention of Canadian manufacturers interested in producing additional items.

The movement of German scientists and technicians to Canada and their assignment to Canadian firms that have applied for their services also falls within the sphere of the activities of the Industrial Development Division. In addition, the Division acts in an advisory capacity to the Immigration Branch of the Department of Citizenship and Immigration regarding the admission of individuals, other than from Commonwealth countries and the United States, who wish to establish new industries in Canada.

The Division works in close co-operation with a widespread network of organizations throughout Canada, including industrial development departments of the provinces, municipalities, railways, banks, power companies, chambers of commerce, boards of trade, and the Canadian Manufacturers' Association.

*The International Trade Relations Division.*—The International Trade Relations Division (formerly Commercial Relations and Foreign Tariffs Division), is concerned with the preparation of studies on international trade developments and the interpretation of the effect of these developments on the Canadian economy as a whole as well as on the domestic and foreign trade of Canada. This Division compiles information on tariffs and customs regulations, foreign exchange and trade documentation of other countries for the use of Canadian exporters and other branches of the Government. One of the main functions of this Division is to analyse the foreign trade situation and the effects of changing foreign tariffs and customs practices in preparation for meetings on the General Agreement on Tariffs and Trade with accompanying tariff negotiations.

*The Economic Forecasting Division.*—This Division is responsible for the preparation of over-all appraisals of economic conditions in Canada, including levels of employment, income, production, trade and prices. The Division draws for its material on the other divisions of the Economic Research and Development Branch and of the Department of Trade and Commerce, as well as other Government departments and agencies and private groups.

**Information Division.**—The principal function of the Information Division is to furnish the commercial community of Canada with information concerning the assistance obtainable by exporters and importers from the Department of Trade and Commerce. This Division is responsible also for stimulating a better appreciation by the general public of the importance of trade to the welfare of Canada.

The attention of exporters and potential exporters is directed to opportunities for the disposal of their products in markets abroad, and of importers to the sources of supply for raw materials and consumer goods unobtainable in this country. Its principal educational and informative medium is "Foreign Trade", the weekly publication of the Foreign Trade Service, in which are reproduced reports of Canadian Trade Commissioners on conditions in their respective territories, articles by Head Office personnel and economists of the Dominion Bureau of Statistics, news items and charts portraying trade trends. Press releases are prepared and distributed to newspapers at home, and material of a similar character despatched to Canadian Trade Commissioners for distribution to newspapers abroad. Pamphlets and brochures are prepared to supplement other information on foreign markets, sources of supply, documentation, regulations and trade restrictions. Assistance is rendered to correspondents of newspapers and periodicals at home and abroad in the preparation of articles pertaining to various phases of Canada's foreign trade. The educational and promotional work of this Division is supported by advertising at home and abroad. The daily press, periodicals and trade papers, as well as films and radio, are also employed. Although the Information Division is part of the Foreign Trade Service, its functions have been expanded to include assistance to the associated agencies of the Department of Trade and Commerce concerned with the development of foreign trade. For example, it handles publicity connected with the projects undertaken by the Canadian Government Exhibition Commission in this and other countries.

**Canadian Commercial Corporation.**—The Canadian Commercial Corporation was established on May 1, 1946, by Act of Parliament to assist in the development of trade between Canada and other nations, to assist persons in Canada to obtain goods and commodities from outside Canada, and to dispose of goods and commodities that are available for export from Canada.

By the terms of the Act, the Corporation assumed the whole of the undertaking of the Canadian Export Board, which was established by Order in Council P.C. 70, of Jan. 31, 1944. This agency was at that time carrying out procurement functions in Canada on behalf of foreign governments, the United Nations Relief and Rehabilitation Administration, and the Canadian Mutual Aid Board. As a result, the Corporation continued without interruption all procurement action being taken on Apr. 30, 1946, by the Canadian Export Board, and has continued to render similar services to a number of foreign governments, particularly those to which Canada has extended loans. The Corporation is in a position to assist Canadians and Canadian Government agencies in the procurement of goods from other countries, when it is necessary that the transactions be handled through a Government agency.

Since Feb. 1, 1947, the Corporation has effected, on behalf of the Minister concerned, the procurement of supplies and the construction of projects required in the interests of national defence. The Defence Supplies Act of 1950 now vests this responsibility in the Minister of Trade and Commerce who employs the Canadian Commercial Corporation as procurement agency for this purpose.

The Corporation, therefore, has three separate but related functions. It acts as procurement agency in Canada for foreign governments; it is available to assist Canadian importers; and, in effect, it acts as agent for the Minister of Trade and Commerce in procurement of defence supplies and the carrying out of defence projects.

**Canadian Government Exhibition Commission.**—The Canadian Government Exhibition Commission by graphic media of all kinds publicizes Canada and helps to sell Canadian products abroad. Under the terms of reference, the Commission is solely responsible for the construction and administration of all government exhibits in international expositions, trade fairs and displays outside Canada, in which the Canadian Government may decide to participate, and of all international expositions and trade fairs sponsored by the Canadian Government which may be held in Canada. The Commission's first fulfilment of the latter half of this responsibility was the development of the Canadian International Trade Fair, held at Toronto in 1948, 1949 and 1950. Manufacturers and producers in Canada and other countries had an opportunity of displaying their products at this Fair.

The Commission also co-operates with Canadian exporters in securing representation for goods at trade fairs and trade promotional displays and, on request, is prepared to advise individual Canadian companies in the preparation of their exhibits.

Though not a producer of literature itself, the distribution of large quantities of materials produced by other Canadian Government Departments and agencies is effected by the Commission at its various presentations.

**Wheat and Grain Division.**—Matters related to Canada's grain trade are handled by the Wheat and Grain Division. This Division assists foreign governments and other buyers in purchasing Canadian wheat, flour and other cereals, and serves as liaison between the Department of Trade and Commerce and the Canadian Wheat Board.

**Export Credits.**—For the general purpose of protecting and expanding Canadian foreign trade interests, the Export Credits Insurance Act was passed in 1944, and amended in August, 1946, and May, 1948. This Act is in two parts; Part I incorporates the Export Credits Insurance Corporation, and Part II provides for loans or guarantees to governments of other countries or their agencies. In May, 1946, Parliament gave assent to the United Kingdom Financial Agreement Act making available a large credit to the United Kingdom. (See also p. 882.)

**Export Credits Insurance Corporation.**—Administered by a board of directors, including the Deputy Minister of Trade and Commerce, the Deputy Minister of Finance and the Governor of the Bank of Canada, the Export Credits Insurance Corporation insures exporters against losses arising from credit and political risks involved in the export or an agreement for the export of goods. Policies are generally issued on a yearly basis, covering exporters' sales to all countries. The main risks covered by Export Credits Insurance Policies include: insolvency or protracted default on the part of the buyer; exchange restrictions in the buyer's country preventing the transfer of funds to Canada; cancellation of an import licence or the imposition of restrictions on the importation of goods not previously subject to restrictions; the occurrence of war between the buyer's country and Canada, or of war, revolution, etc., in the buyer's country.

The insurance is available under two main classifications—general commodities and capital goods. Coverage for general commodities can be procured by exporters under two types of policies: (1) the Contracts Policy, which insures an exporter against loss from the time he books the order until payment is received or; (2) the Shipments Policy, obtainable at lower rates of premium and which covers the exporter from the time of shipment until payment is received.

Insurance of capital goods offers protection to exporters dealing in plant equipment, heavy machinery, etc., where extended credit for longer periods is often necessary. Specific policies are issued for transactions involving capital goods, but the general terms and conditions are the same as those applicable to policies for general commodities.

The Corporation insures exporters on a co-insurance basis up to a maximum of 85 p.c. of the gross invoice value of shipments. This co-insurance basis also operates in the distribution of recoveries obtained after payment of a loss, and these recoveries are shared by the Corporation and exporter in the proportions of 85 and 15 p.c., respectively.

The Corporation, from its inception to June 30, 1950, has issued policies having a total value of \$229,546,371. Claims paid to exporters, during the same period, covering losses sustained by them under the terms and conditions of their policies, amounted to \$683,015. A great majority of these claims resulted from exchange transfer difficulties, with relatively few arising from insolvencies. Recoveries amounting to \$276,165 were made.

Excess of income over expenditure to June 30, 1950, was \$1,033,099, which has been added to its underwriting reserve, in accordance with the practice followed by the Corporation since it began operations.

The loans made by the Canadian Government under financial agreements to the United Kingdom and foreign countries to facilitate purchases of goods and services in Canada are shown at p. 882.

## **Section 2.—The Development of Tariffs**

A short sketch of trade and tariffs prior to Confederation is given at pp. 480-482 of the 1940 edition of the Year Book. The 1942 Year Book, at pp. 427-428, traces the development from Confederation to the adoption in 1904 of the present form of preferential tariff.

Owing to the limitations of space in the Year Book, it has been necessary, in regard to tariffs, to adopt the policy of confining any detail regarding commodities and countries to tariff relationships at present in force, and to summarize as much as possible historical data and details of preceding tariffs, giving references to those editions of the Year Book where extended treatments can be found.

### **Subsection 1.—The Canadian Tariff Structure**

The Canadian Tariff consists mainly of three sets of rates—British Preferential, Most-Favoured-Nation, and General. British Preferential rates consisted at first (1898) of a remission of 25 p.c. of the duties ordinarily paid but later (1900) were

advanced to 33½ p.c. and, after 1904, took the form of a specially low rate of duty on almost all imported dutiable commodities. This is the first broad category of the tariff structure and these rates are applied to specified goods from British countries if shipped direct to Canada. On certain goods special rates may be applied under the British Preferential Tariff; these special rates are lower on those goods than the ordinary British Preferential scale.

The second scale is the Most-Favoured-Nation Tariff. These rates apply to goods from countries that have been accorded tariff treatment more favourable than the General Tariff but which are not entitled to the British Preferential rate. To certain non-British countries, a special concession under the Most-Favoured-Nation rates may be granted and rates lower than the Most-Favoured-Nation apply by agreement.

The third class of duties is the General Tariff. This is levied on all imports that are not covered by Preferential or Most-Favoured-Nation rates.

British Preferential rates apply to all countries within the Commonwealth. They may, however, be modified downward in their application to specific countries when trade agreements are being revised or discussed between Canada and other Commonwealth countries. The whole tariff structure is very complicated. Almost every Budget that is brought down in the House of Commons changes the incidence of the tariff in some particulars. It would be impossible to attempt here a discussion of tariff schedules. The schedules and rates in force at any particular time may be obtained from the Department of National Revenue, which is responsible for administering the Canadian Tariff.

In all cases where the tariff applies, there are provisions for drawbacks of duty on imports of semi-processed goods used in the manufacture of products later exported. The purpose of these drawbacks is to give Canadian manufacturers a fair basis of competition with foreign producers of similar goods, where it is felt to be warranted. There is a second class of drawbacks known as 'home consumption' drawbacks; these apply mainly to imported materials used in the production of specified classes of goods manufactured for home consumption.

Too often one-sided competition arises out of unfair practices, such as dumping or the manipulation of exchange advantages. Wide powers have been given in certain instances to supplement tariff provisions. Thus, the Minister of National Revenue or, through him, the customs officials have at times been empowered to establish a 'fair market value' as a basis of applying duties to be collected. The term 'fair market value' is vague and open to various interpretations and has been frequently criticized but, in exceptional cases for which they are designed, such valuations have proved effective.

The exchange situation as it affects the Tariff is a different problem. A foreign currency that has become considerably depreciated in relation to the Canadian dollar enables the country concerned to export goods to Canada under a very definite advantage and customs officials have been given power, under conditions such as these, to value imports from such countries at a 'fair rate of exchange'. Much, of course, depends on the manner in which the above powers are applied by

the administrative officials and their understanding of the reasons for their application and, while the powers of fixing 'fair market value' and 'fair rate of exchange' have been applied to meet extraordinary conditions in the past, these powers have now been modified by clauses in trade agreements drawn up with individual countries.

**The Tariff Board.**—The Tariff Board, constituted by the Tariff Board Act, 1931, consists of three members, one of whom is chairman and another vice-chairman. The duties and powers of the Board derive from three Statutes of Canada: the Tariff Board Act, the Customs Act, and the Excise Tax Act.

Under the Tariff Board Act the Board makes inquiry into and reports upon any matter in relation to goods that, if brought into Canada or produced in Canada, are subject to or exempt from duties of customs or excise and on which the Minister of Finance desires information. The investigation into any such matter may include inquiry as to the effect that an increase or decrease of the existing rate of duty upon a given commodity might have upon industry or trade, and the extent to which the consumer is protected from exploitation. It is also the duty of the Board to inquire into any other matter in relation to the trade and commerce of Canada that the Governor in Council sees fit to refer to the Board for inquiry and report. Usually the references take one of two forms: authority for review of sections of the Customs Tariff relating to an entire industry, or for investigation in respect of specified commodities. Under a provision of the Act, reports are tabled in Parliament.

Under the provisions of the Customs Act and the Excise Tax Act, the Tariff Board is authorized to act as a tribunal to hear appeals from rulings of the Department of National Revenue in respect of matters of administration including those of excise taxes, tariff classification, value for duty, and drawback of customs duties. Declarations of the Board on appeals are final and conclusive with provision for appeal to the Exchequer Court of Canada in the case of decisions under the Customs Act. Tariff references and appeals receive public hearings at which interested parties submit oral statements and written briefs relating to matters under consideration.

## Subsection 2.—Tariff Relationships with Other Countries

**General Agreement on Tariffs and Trade.\***—The General Agreement on Tariffs and Trade is by far the most important trade agreement, from Canada's viewpoint, in which she is participating at the present time. Fundamentally, it is a multilateral agreement which applies equally to all the contracting parties.

The Agreement consists of three parts corresponding to the several distinctive aspects of trade negotiations:—

Part I (Articles 1 and 2) deals with tariff rates. The general provisions regarding the application of rates of duty negotiated under the Agreement are set forth and the schedules of negotiated duties are also included.

Part II (Articles 3 to 23) covers all non-tariff matters which have a direct bearing on international trade. The principles set forth in this Part constitute an international code of regulations for conducting foreign trade.

Part III (Articles 24 to 34) deals with matters concerning the administration and the relationship of the Agreement to the Charter for an International Trade Organization.

\* For details concerning the development of the General Agreement on Tariffs and Trade, see the 1950 edition of the Year Book, pp. 966-968.

Part I defines the meaning and application of the principle of most-favoured-nation treatment, which is the key provision of the Agreement. Briefly, it requires that each contracting party will accord the same advantages and privileges with respect to international trade to all other contracting parties. An exception is made to permit existing preferences to be maintained, but these cannot be increased. In connection with Part I, there are schedules listing the products on which each country has agreed to bind or reduce its tariff. As a rule, tariff negotiations are initiated by the principal supplier and, in every case, the rate of duty finally agreed upon becomes the rate which would apply to a similar product sold by any country which is a contracting party to the Agreement.

Under this new system of multilateral tariff negotiations, two sessions of meetings have taken place at Geneva and Annecy, and a third session of negotiations began in September, 1950, at Torquay. The tariff concessions which Canada granted and received at the conference at Geneva are described in the 1948-49 edition of the Year Book, pp. 875-877, and the concessions negotiated at Annecy are discussed in the 1950 edition of the Year Book, pp. 968-970. This procedure of holding simultaneous negotiations among many countries, all of which have agreed to abide by the same code of principles with regard to administering their foreign trade, has speeded up the process of revising tariffs. This was most essential in view of the dislocations in trade which resulted from the Second World War, when some countries suffered tremendous losses in productive capacity and other countries experienced an unprecedented acceleration in their industrial development.

Part II of the Agreement sets forth in considerable detail the rules and regulations designed to reduce and eventually eliminate discriminatory practices in international trade. Traditionally, the tariff was the chief instrument for regulating the volume of imports which each country was willing to accept. To-day, however, the most effective and widely adopted method of regulating the flow of imports is through the application of more drastic measures, such as quantitative restrictions, exchange controls, state barter deals and bilateral agreements. The contracting parties agree to apply the provisions of Part II "to the fullest extent not inconsistent with existing legislation", and it is on this basis that the terms of this part of the Agreement are observed to-day. The most significant clauses include those dealing with taxes on imported goods, various forms of quantitative restrictions, special considerations for countries in balance of payment difficulties, and special considerations for countries undertaking defined programs of economic development or reconstruction. (See the 1948 edition of the Year Book, p. 874, and the 1950 edition, p. 967.)

Part III of the Agreement deals with the mechanics of administration. Representatives of the contracting parties are required to meet at frequent intervals, usually about every six months, to carry out the provisions of the Agreement which require joint action and generally to facilitate the operation of the Agreement. These meetings are referred to as "sessions" of the contracting parties and five sessions have taken place to date. The first session was held at Havana in March, 1948, the second session at Geneva in August, 1948, the third session at Annecy

in April, 1949, the fourth session at Geneva in February, 1950. The work of the first three sessions is reviewed in the 1950 edition of the Year Book, p. 970. At the fourth session, the contracting parties reviewed the trade restrictions which each country was imposing at that time, and various comments and suggestions were made with respect to the operation and necessity for the restrictions.

On Sept. 28, 1950, at Torquay, England, a Canadian Government delegation of trade experts again assembled with the delegates of other interested trading nations to open the third round of tariff negotiations under the General Agreement on Tariffs and Trade. It was expected that the conference would continue its work throughout the winter.

The countries which had participated in the previous two sessions of negotiations, and which had signed the General Agreement on Tariffs and Trade (GATT), were as follows: Australia, Belgium, Brazil, Burma, Canada, Ceylon, Chile, Cuba, Czechoslovakia, Denmark, Dominican Republic, France, Finland, Greece, Haiti, India, Indonesia, Italy, Lebanon, Liberia, Luxembourg, Netherlands, New Zealand, Nicaragua, Norway, Pakistan, South Africa, Southern Rhodesia, Sweden, Syria, United Kingdom, and United States.

The following countries accepted the invitation from the contracting parties to negotiate at Torquay with a view to acceding to the Agreement: Guatemala, Austria, the German Federal Republic (Western Germany), Korea, Peru, Philippines, Turkey, Uruguay.

The contracting parties to the GATT also opened their fifth session at Torquay on Nov. 2, 1950, under the chairmanship of L. Dana Wilgress, Canadian High Commissioner in the United Kingdom. During the session, various problems and matters of policy affecting the trade of the members were brought up for consideration.

The relationship of the General Agreement on Tariffs and Trade to the Charter of the International Trade Organization is set forth in Article 29 of the Agreement. On the day that the Charter of the International Trade Organization enters into force, the General Agreement on Tariffs and Trade will be superseded by corresponding provisions of the Charter, with the exception of the schedules of tariff concessions. In the meantime, the General Agreement on Tariffs and Trade is in force provisionally, subject to the limitation of each country's existing legislation, and the contracting parties are free to withdraw from the Agreement on six months notice after Jan. 1, 1951.

The Havana Charter for an International Trade Organization, has been approved by representatives of 53 of the countries which participated in the United Nations Conference on Tariffs and Employment, held at Havana from November, 1947 to March, 1948. It is the blueprint for an inter-governmental organization which will have considerably broader powers and responsibilities than those exercised under the General Agreement on Tariffs and Trade at the present time. (For a description of the Charter, see the 1948-49 edition of the Year Book, pp. 873-874, and the 1950 edition, p. 967.)

**Other Tariff Relations.**—The General Agreement on Tariffs and Trade is a blanket agreement applicable to all contracting parties on the same basis. However, there are also other tariff arrangements in effect to-day which were negotiated prior to the provisional adoption of the General Agreement. In many cases, these earlier trade arrangements are allowed to stand. The contracting parties are also permitted to negotiate new trade agreements, subject to the qualifications of the General Agreement, but they cannot increase any margins of preference or extend new preferences.

Canada has a number of reciprocal tariff arrangements with members of the Commonwealth and other countries. They are grouped as follows:—

- (1) application to Canada of some old commercial treaties of the United Kingdom;
- (2) participation in commercial treaties of the United Kingdom by Canadian Acts of Parliament or Orders in Council;
- (3) Canadian Conventions of Commerce or Trade Agreements; and
- (4) exchanges of notes respecting tariff matters.

Canada extended preferential rates for the first time to the United Kingdom in 1898, and after the First World War most-favoured-nation agreements were made with countries outside the Empire. By the late 1930's, Canada had trade agreements with 32 countries but some of these lapsed during the Second World War and have not been replaced.

New commercial agreements were made during the War with several South American countries which had expanded their trade with Canada and, since the end of the War, most-favoured-nation agreements have been made with Turkey, Greece, Italy, China, Nicaragua, the Federal Republic of Germany, and Austria.

Many of Canada's reciprocal trade treaties are simply exchanges of most-favoured-nation treatment and do not include schedules of tariff concessions. However, some important agreements, such as the Canada-United States trade treaties of 1935 and 1938, do include lists of negotiated tariff rates. Practically all the items bound in these earlier agreements are now covered by the General Agreement.

The benefit received by Canadian exports under most-favoured-nation treatment in any country depends upon the tariff and treaty system in force. Some countries possess a single-column tariff and extend whatever concessions they make to all countries without discrimination. Other countries have minimum, intermediate and maximum tariff rates and their most-favoured-nation rates are either the minimum or intermediate schedules. Sometimes, most-favoured-nation treatment is subject to certain reservations concerning preferential rates granted by one state to another on special historical, political or geographical grounds.

The Canadian Tariff consists of three basic rates of duty, namely: British Preferential, Most-Favoured-Nation, and General. Various modifications in these rates have been made under special trade arrangements, but the British Preferential rates, which are applicable to numerous types of goods from many parts of the Commonwealth, are always the most favourable. In return for this special treatment, Canadian goods enjoy similar tariff advantages in many Commonwealth countries.

The following list gives the tariff arrangements in which Canada was participating at the end of December, 1950:—

### Commonwealth Countries

Country	Treaty or Convention	Terms
UNITED KINGDOM.....	Trade Agreement signed Feb. 23, 1937; in force Sept. 1, 1937. Modified by an Exchange of Letters, Nov. 16, 1938, resulting from United Kingdom-United States Trade Agreement of Nov. 17, 1938. Further modified by General Agreement on Tariffs and Trade and Exchange of Notes Oct. 30, 1947. Provisionally brought into force Jan. 1, 1948.	Various concessions by both countries, including exchange of lowest tariff rates (some reservations by Canada) and binding against increase of scheduled preferential duties. Extends also to Colonial Empire.
IRELAND <sup>1</sup> .....	Trade Agreement signed Aug. 20, 1932; in force Jan. 2, 1933.	Canada concedes British Preferential Tariff in return for most - favoured - nation treatment in Ireland. Made for five years and thereafter until terminated on six months notice.
AUSTRALIA.....	Trade Agreement signed July 8, 1931; in force Aug. 3, 1931. Supplemented by General Agreement on Tariffs and Trade. Provisionally brought into force Jan. 1, 1948.	Each country accords the other reduced rates on schedules of goods, and otherwise (with a few exceptions in Australia) exchange their British Preferential Tariffs with each other. Made for one year and thereafter until terminated on six months notice. Preferences modified by General Agreement on Tariffs and Trade.
NEW ZEALAND.....	Trade Agreement signed Apr. 23, 1932; in force May 24, 1932. Supplemented by General Agreement on Tariffs and Trade. Provisionally brought into force July 26, 1948.	Exchange specific preferences on scheduled goods and otherwise concede British Preferential Tariffs reciprocally. Made for one year, but kept in force by short-term extensions. Since Sept. 30, 1941, in force until terminated on six months notice. Preferences modified by General Agreement on Tariffs and Trade.
UNION OF SOUTH AFRICA.	Trade Agreement signed Aug. 20, 1932; in force Oct. 13, 1932. Supplemented by General Agreement on Tariffs and Trade. Provisionally brought into force June 14, 1948.	Agreement extends list of preferences formerly exchanged in absence of formal Agreement. Made for five years and thereafter until terminated on six months notice.
SOUTHERN RHODESIA..	Trade Agreement of Aug. 20, 1932, terminated on Jan. 2, 1938, on notice from Southern Rhodesia. Provisions have nevertheless continued in force. Modified by General Agreement on Tariffs and Trade. Protocol of Provisional Application signed June 11, 1948. (The reduced duty rates were brought into force on May 19, 1948.)	Canada grants British Preferential treatment and Southern Rhodesia extends tariff preferences granted other Dominions.

<sup>1</sup> Commonwealth privileges extended to Ireland.

## Commonwealth Countries—concluded

Country	Treaty or Convention	Terms
INDIA.....	General Agreement on Tariffs and Trade. Provisionally brought into force July 8, 1948.	Canada accords India British Preferential treatment; India grants no tariff preferences to Canada.
PAKISTAN.....	General Agreement on Tariffs and Trade. Provisionally brought into force July 30, 1948.	Canada grants Pakistan British Preferential treatment; Pakistan grants no tariff preferences to Canada.
CEYLON.....	Ceylon participates in Trade Agreement of 1937 between United Kingdom and Canada. Supplemented by General Agreement on Tariffs and Trade. Provisionally brought into effect July 29, 1948.	Canada and Ceylon exchange Preferential Tariff treatment.
BRITISH WEST INDIES.	Trade Agreement signed July 6, 1925; in force Apr. 30, 1927. Supplemented by General Agreement on Tariffs and Trade.	Exchange of specific margins of preferences. Made for twelve years and thereafter until terminated on one years notice. A Canadian notice of Nov. 23, 1938, terminating the Agreement, was replaced by one of Dec. 27, 1939, continuing the Agreement subject to termination on six months notice.

## Non-Commonwealth Countries

Country	Treaty or Convention	Terms
ARGENTINA.....	Trade Agreement signed Oct. 2, 1941; provisionally in force Nov. 15, 1941.	Exchange of most - favoured - nation treatment. Provisional application may be terminated on three months notice. To come into force definitively 30 days after exchange of ratification for two years and thereafter until terminated on six months notice.
AUSTRIA.....	By Order in Council Canada extends to Austria most-favoured-nation treatment, effective Sept. 7, 1949. Austria also grants most - favoured - nation treatment to Canada. This arrangement was made without exchange of notes or other formal agreement.	Exchange of most - favoured - nation treatment.
BENELUX (BELGIUM, LUXEMBOURG AND THE NETHERLANDS), BELGIAN COLONIES, SURINAM AND CURAÇAO.	General Agreement on Tariffs and Trade. Provisionally brought into effect Jan. 1, 1948.	Exchange of most - favoured - nation treatment including scheduled concessions.

## Non-Commonwealth Countries—continued

Country	Treaty or Convention	Terms
BOLIVIA.....	Order in Council of July 20, 1935, accepted Article 15 of the United Kingdom - Bolivia Treaty of Commerce of Aug. 1, 1911.	Exchange of most - favoured - nation treatment. May be terminated on one years notice.
BRAZIL.....	Trade Agreement signed Oct. 17, 1941; provisionally in force from date of signing and definitively on Apr. 16, 1943. Supplemented by General Agreement on Tariffs and Trade. Provisionally brought into force July 30, 1948.	Exchange of most - favoured - nation treatment. Made for two years from Apr. 16, 1943, and thereafter for one - year periods until terminated on six months notice.
BURMA.....	General Agreement on Tariffs and Trade. Provisionally brought into force July 29, 1948.	Exchange of most - favoured - nation treatment.
CHILE.....	Trade Agreement signed Sept. 10, 1941; in force provisionally Oct. 15, 1941, and definitively on Oct. 29, 1943. Supplemented by General Agreement on Tariffs and Trade. Provisionally brought into force Mar. 16, 1949.	Exchange of most - favoured - nation treatment. Made for two years from Oct. 29, 1943, and thereafter until terminated on six months notice.
CHINA.....	<i>Modus vivendi</i> signed Sept. 26, 1946; in effect Sept. 28, 1946. Supplemented by General Agreement on Tariffs and Trade. Protocol of Provisional Application signed Apr. 21, 1948. <sup>1</sup> China withdrew from General Agreement on Tariffs and Trade May 5, 1950.	Exchange of most - favoured - nation treatment. Made for one year and thereafter until terminated on three months notice.
COLOMBIA.....	Treaty of Commerce with United Kingdom of Feb. 16, 1866, applies to Canada. A Trade Agreement between Colombia and Canada was signed Feb. 20, 1946, but has not been put into force.	Exchange of most - favoured - nation treatment. Protocol of Aug. 20, 1912, provides means for separate termination by Dominions on one years notice. Exchange of Notes Dec. 30, 1938, continued Treaty in force until Sept. 30, 1939, and thereafter until terminated on three months notice.
COSTA RICA.....	Exchange of Notes with United Kingdom of Mar. 1-2, 1933, and Canadian Order in Council of July 20, 1935.	Exchange of most - favoured - nation treatment.
CUBA.....	General Agreement on Tariffs and Trade. Provisionally brought into force Jan. 1, 1948.	Exchange of most - favoured - nation treatment including scheduled concessions.
CZECHOSLOVAKIA.....	Convention of Commerce signed Mar. 15, 1928, in force Nov. 14, 1928. Supplemented by General Agreement on Tariffs and Trade. Provisionally brought into force Apr. 21, 1948.	Exchange of most - favoured - nation treatment. Made for four years and thereafter until terminated on one years notice.

<sup>1</sup> Status of *modus vivendi* uncertain at Jan. 31, 1951.

## Non-Commonwealth Countries—continued

Country	Treaty or Convention	Terms
DENMARK.....	Treaties of Peace and Commerce with United Kingdom of Feb. 13, 1660-61 and July 11, 1670, apply to Canada. Supplemented by General Agreement on Tariffs and Trade. Provisionally brought into force May 28, 1950.	Exchange of most - favoured - nation treatment. Declaration of May 9, 1912, provides means for separate termination by Dominions on one years notice.
DOMINICAN REPUBLIC	Trade Agreement signed Mar. 8, 1940; in force provisionally Mar. 15, 1940, and definitively Jan. 22, 1941. Supplemented by General Agreement on Tariffs and Trade. Provisionally brought into force May 19, 1950.	Exchange of most - favoured - nation treatment. Made for three years from Jan. 22, 1941, and thereafter until terminated on six months notice.
EL SALVADOR.....	Exchange of Notes of Nov. 2, 1937; in force Nov. 17, 1937.	Exchange of most - favoured - nation treatment. Made for one year and thereafter until terminated on four months notice.
FINLAND.....	Exchange of Notes of Nov. 13-17, 1948. Supplemented by General Agreement on Tariffs and Trade. Provisionally brought into force May 25, 1950.	Exchange of most - favoured - nation treatment. Effective until a trade agreement is concluded, or, alternately, for a period of one year and thereafter until terminated on three months notice.
FRANCE AND COLONIES	General Agreement on Tariffs and Trade. Provisionally brought into force Jan. 1, 1948.	Exchange of most - favoured - nation treatment including scheduled concessions.
WESTERN GERMANY...	Agreement between various members of the General Agreement on Tariffs and Trade, including Canada and the Allied central authorities of Western Germany, signed Sept. 14, 1948.	Granting unilaterally but on reciprocal basis, exchange of most - favoured - nation treatment.
GREECE.....	<i>Modus vivendi</i> by Exchange of Notes of July 28, 1947; effective Aug. 28, 1947. Supplemented by General Agreement on Tariffs and Trade. Provisionally brought into force Mar. 1, 1950.	Exchange of most - favoured - nation treatment. Made for a period of one year and thereafter until terminated on three months notice.
GUATEMALA.....	Trade Agreement signed Sept. 28, 1937; in force Jan. 14, 1939.	Exchange of most - favoured - nation treatment. Made for three years and thereafter until terminated on six months notice.
HAITI.....	Trade Agreement signed Apr. 23, 1937; in force Jan. 10, 1939. Supplemented by General Agreement on Tariffs and Trade. Provisionally brought into force Jan. 1, 1950.	Exchange of most - favoured - nation treatment.

## Non-Commonwealth Countries—continued

Country	Treaty or Convention	Terms
ITALY.....	<i>Modus vivendi</i> by exchange of notes of Apr. 23-28, 1948; effective Apr. 28, 1948. Supplemented by General Agreement on Tariffs and Trade. Provisionally brought into force May 30, 1950.	Exchange of most-favoured-nation treatment. Made for a period of one year and thereafter until terminated on three months notice.
LEBANON.....	Special Arrangement by Order in Council of Nov. 19, 1946. Supplemented by General Agreement on Tariffs and Trade. Provisionally brought into force July 31, 1948.	Exchange of most-favoured-nation treatment.
LIBERIA.....	General Agreement on Tariffs and Trade provisionally brought into force May 20, 1950.	Exchange of most-favoured-nation treatment.
MEXICO.....	Trade Agreement signed Feb. 8, 1946; in force provisionally same date. Ratifications exchanged on May 6, 1947.	Exchange of most-favoured-nation treatment. Entered into force definitively thirty days after exchange of ratifications for two years and thereafter until termination on six months notice.
NICARAGUA.....	Trade Agreement signed Dec. 19, 1946, in force provisionally same date. Supplemented by General Agreement on Tariffs and Trade. Provisionally brought into force May 28, 1950.	Exchange of most-favoured-nation treatment.
NORWAY.....	Convention of Commerce and Navigation with United Kingdom of Mar. 18, 1826, applies to Canada. Supplemented by General Agreement on Tariffs and Trade. Provisionally brought into force July 10, 1948.	Exchange of most-favoured-nation treatment. Convention of May 16, 1913, provides means for separate termination by Dominions on one years notice.
PANAMA.....	Order in Council of July 20, 1935, accepted Article 12 of the United Kingdom - Panama Treaty of Commerce of Sept. 25, 1928.	Exchange of most-favoured-nation treatment. In force until terminated on one years notice.
PARAGUAY.....	Exchange of Notes of May 21, 1940, in force June 21, 1940.	Canadian Intermediate Tariff exchanged for most-favoured-nation treatment in Paraguay. In force until terminated on three months notice.
POLAND.....	Convention of Commerce signed July 3, 1935; in force Aug. 15, 1936.	Exchange of most-favoured-nation treatment and special reductions for limited lists of goods. Made for one year and thereafter until terminated on three months notice.
PORTUGAL, INCLUDING MADEIRA, PORTO SANTO, AND AZORES.	Trade Agreements Act of June 11, 1928, accepted Article 21 of the United Kingdom - Portugal Treaty of Commerce of Aug. 12, 1914; in force Oct. 1, 1928.	Exchange of most-favoured-nation treatment. In force until terminated on one years notice.

## Non-Commonwealth Countries—concluded

Country	Treaty or Convention	Terms
SPAIN.....	Spanish Treaty Act of June 11, 1928, sanctioned United Kingdom - Spain Treaty of Commerce of Oct. 31, 1922 (revised Apr. 5, 1927); in force Aug. 1, 1928.	Exchange of most-favoured-nation treatment. In force until terminated on six months notice.
SWEDEN.....	United Kingdom - Sweden Convention of Commerce and Navigation of Mar. 18, 1826, applies to Canada. Supplemented by General Agreement on Tariffs and Trade. Provisionally brought into force May 1, 1950.	Exchange of most-favoured-nation treatment. In force until terminated on one years notice. Declaration of Nov. 27, 1911, provides means for separate termination by Dominions on one years notice.
SWITZERLAND.....	United Kingdom - Switzerland Treaty of Friendship, Commerce and Reciprocal Establishment of Sept. 6, 1855, applies to Canada. By Exchange of Notes, Liechtenstein included under terms of this agreement, effective Aug. 21, 1947.	Exchange of most-favoured-nation treatment. In force until terminated on one years notice. Convention of Mar. 30, 1914, provides means for separate termination by Dominions on one years notice.
SYRIA.....	Special Arrangement by Order in Council of Nov. 19, 1946. Supplemented by General Agreement on Tariffs and Trade. Provisionally brought into force July 31, 1948.	Exchange of most-favoured-nation treatment.
TURKEY.....	Exchange of Notes signed Mar. 1-15, 1948, in effect Mar. 15, 1948.	Exchange of most-favoured-nation treatment. In effect for one year and thereafter until terminated on three months notice.
UNITED STATES.....	The General Agreement on Tariffs and Trade. Entered into force provisionally Jan. 1, 1948.	Exchange of most-favoured-nation treatment including scheduled concessions. If at any time General Agreement on Tariffs and Trade is set aside, the Trade Agreement signed Nov. 17, 1938, will again come into effect.
URUGUAY.....	Trade Agreement signed Aug. 12, 1936; in force May 15, 1940. (Uruguay took part in tariff negotiations at Annecy but has not yet acceded to General Agreement on Tariffs and Trade.)	Exchange of most-favoured-nation treatment. Made for three years and thereafter until terminated on six months notice.
YUGOSLAVIA.....	Trade Agreements Act of June 11, 1928, accepted Article 30 of United Kingdom-Serb-Croat-Slovene Treaty of Commerce and Navigation of May 12, 1927; in force Aug. 9, 1928.	Exchange of most-favoured-nation treatment. In force until terminated on one years notice.

		Subsection 2. Cost-of-Living Index....	964
SECTION 2. WHOLESALE PRICES AND COST OF LIVING.....	959	SECTION 3. INDEX NUMBERS OF SECURITY PRICES.....	970
		SECTION 4. INDEX NUMBERS OF BOND YIELDS.....	973

NOTE.—*The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.*

An article summarized from the "Report of the Royal Commission on Prices" is given at pp. 978-982 of the 1950 edition of the Year Book.

### Section 1.—Wartime Prices and Trade Board, 1950

This Section continues the account of the activities of the Wartime Prices and Trade Board given in earlier editions of the Canada Year Book.

The last of the commodity controls administered by the Wartime Prices and Trade Board disappeared on Feb. 15, 1950, with the revocation of the remaining orders relating to primary iron and steel. Since that date the activities of the Board have been confined to rent control.

During 1950 no further general adjustments were made in rental ceilings or in conditions affecting security of tenure, but in administration the process of decontrol continued by reducing personnel and closing branch and regional offices. On Jan. 1, 1950, the Board had a staff of 831, and maintained 47 offices outside Ottawa. On Feb. 1, 1951, it had 270 employees and only eight offices outside Ottawa, one in each province except Saskatchewan and Newfoundland where federal rent controls did not operate.

The offer of the Minister of Finance on behalf of the Federal Government to withdraw rent controls in any province which desired to institute provincial controls was accepted by Saskatchewan in the autumn of 1949 to take effect Apr. 1, 1950. At the request of that province the authorized increases in rents and the relaxations in security of tenure which became effective elsewhere on Dec. 15, 1949, were made not applicable within Saskatchewan. On Apr. 1, 1950, the Wartime Leasehold Regulations ceased to apply in Saskatchewan and a provincial system of rent control took their place.

\*Except as otherwise credited, this Chapter has been revised in the Prices Section, Labour and Prices Division of the Dominion Bureau of Statistics.

In November, 1949, the Federal Government referred to the Supreme Court of Canada the question of the validity of the Wartime Leasehold Regulations, and on Mar. 1, 1950, the Court unanimously upheld them.

In March, 1950, Parliament extended the Continuation of Transitional Measures Act to Apr. 30, 1951, the date of the earliest expiration of the leases required of landlords who desired to avail themselves of the right to increase rents under the order effective Dec. 15, 1949. Speaking to the resolution in the House of Commons the Minister of Finance gave explicit notice that the Government did not intend to ask for a further extension beyond Apr. 30, 1951.

On Jan. 24, 1951, the Government of Quebec introduced a bill in the legislature providing for a system of provincial rent control as from May 1, 1951.

## Section 2.—Wholesale Prices and Cost of Living

Statistical and economic analysis of commodity prices normally requires an examination of price change at various stages of production and distribution. Both prices and price indexes have much more significance when it is known whether they relate to primary producers, manufacturers, wholesalers or retailers. In order to achieve this distinction, commodity prices are normally classified as either 'wholesale' or 'retail', and the principal indexes of these groups are shown in the following pages.

In the case of wholesale, prices are not restricted to the normal meaning of that word, but may include price quotations ranging from those paid by primary producers for basic raw materials to prices paid by retailers for finished articles. Within this broad group, numerous sub-classifications are available, such as component material, degree of manufacture and purpose. Wholesale prices are frequently very sensitive to changing conditions and are often used to gauge the economic effect of events, as well as to forecast retail price change. An example of this is the price increase which followed the outbreak of hostilities in Korea in 1950.

Retail price indexes are important because they indicate changes in living costs and, along with measurements of income, show fluctuations in the economic well-being of the community. During recent years the cost-of-living index has been used extensively in wage negotiations.

### Subsection 1.—Wholesale Prices

Wholesale price index numbers in Canada cover the period dating from Confederation in 1867. An intermittent decline characterized the first 30 years of this interval but from an average of 43.6 in 1897, the general wholesale index (1926 = 100) advanced without appreciable interruption to 64.4 in July, 1914. By 1918, this index had reached 132.8, and continued upward to a post-war inflationary peak of 164.3 in May, 1920. The subsequent deflationary period lasted about two years, and between 1922 and 1929 price levels remained comparatively stable. Annual averages in this interval held between a high of 102.6 for 1925 and 95.6

for 1929. For the four years following 1929, depressionary influences were so severe that prices fell to the level of those of 1913. In February, 1933, the wholesale index touched an extreme low of 63.5 before turning upward again. Irregular recovery then continued until 1937, but the highest point reached, 87.6 in July, 1937, was substantially below the 1926 average. The collapse of the wheat market in 1938, along with a fairly general depression in other markets, carried wholesale price levels just prior to the outbreak of war in 1939 down to about 11 points above the 1913 level. The August, 1939, index of 72.3 marked the extreme low of a two-year decline. The movement of prices prior to the outbreak of the Second World War was quite different from that which preceded the First World War. The relatively low level of prices in August, 1939, probably influenced the sharper initial advance at the outbreak of war. However, during 1940, price levels steadied and showed no sign of a steep increase until 1941. By that time, great expansion in wartime production had made serious inroads into stocks of nearly all basic commodities and, at the end of 1941, wheat remained the only important commodity for which stocks exceeded predictable requirements. The introduction of general price control in December, 1941, ended a year in which wholesale prices had advanced 11 p.c. as compared with about 3 p.c. in 1940. The effectiveness of control is indicated by the fact that percentage increases in wholesale prices amounted to only 3.7 and 5.7 during the years 1942 and 1943, respectively, while the December, 1944, index remained the same as the December, 1943, figure. The December, 1945, index of 103.9 was 11 p.c. above that for December, 1941, when price control became generally effective.

The precipitous advance in United States general wholesale prices which began during the latter half of 1946 was of great concern to Canadian price-control authorities. This advance had been anticipated in July, 1946, when the Canadian dollar was returned to par with the United States dollar, thus reducing the Canadian dollar cost of imports from the United States. This provided a buffer of 10 p.c. only and the rise in United States prices was greater than that on a large majority of imported articles so that continuous pressure was felt, especially among individual items. The Canadian general wholesale price index rose from 103·6 to 112·0, an increase of over 8 p.c. between May, 1945, and December, 1946.

The Canadian price rise accelerated in 1947 as internal controls continued to be relaxed. The monthly general wholesale index advanced without interruption from 112·0 at December, 1946, to 143·5 at December, 1947, an increase of 28 p.c. The rise carried through into 1948, although at a decreasing rate, and by December the index had reached a level of 159·6. Wholesale price levels during 1949 were generally stable.

Wholesale prices rose narrowly during the first five months of 1950 to reach an index level of 161·8 (1926 = 100) by May. In June, a sharp gain to 165·0 occurred, due mainly to rapidly advancing prices for live stock, lumber, iron and steel products and non-ferrous metals. An important factor stimulating further advance was the outbreak of war in Korea. The effect on basic commodities originating in or near that area was particularly sharp. By the end of the year the index had risen to 175·7.

### 1.—Annual Index Numbers of Wholesale Price Groups, Significant Years, 1940-50, and Monthly Index Numbers, 1949 and 1950

(1926=100)

NOTE.—Figures for significant years 1913-39 will be found at p. 952 of the 1948-49 edition of the Year Book.

Year	General Whole- sale	Con- sumer Goods	Pro- ducers Goods	Raw and Partly Manu- factured Goods	Fully and Chiefly Manu- factured Goods	Canadian Farm Products <sup>1</sup>	Building and Con- struction Materials	Indus- trial Materials

<sup>1</sup> Includes wheat participation payments authorized up to Mar. 31, 1949, and retroactive to August, 1945. Commencing Aug. 1, 1949, western oats and barley were brought under control of the Canadian Wheat Board. Prices used for Canadian farm products since that time have been initial payments to farmers and participation payments are included whenever announced. Participation payments for the crop year 1949 were published Oct. 17, 1950, and indexes revised accordingly for the period August, 1949, to July, 1950.

**Residential Building Materials.**—In March, 1949, a series of index numbers of residential building material prices (basis: 1935-39=100) was prepared and published in response to numerous requests for precise measurements of material components of residential construction. A general index of building material prices has been available for many years but it did not meet the more specific requirements arising out of the post-war housing projects. A description of this index together with an appendix giving items included and percentage weights may be found in a bulletin entitled "Price Index Numbers of Residential Building Materials, 1926 to 1948".

The composite index of residential building material prices registered a marked rise during 1950 as compared with 1949 when a narrow decline occurred. The June, 1950, index level of 238.3 compared with 226.2 in December, 1949, 229.0 in December, 1948, 205.5 in December, 1947, and 157.4 in December, 1946. Sub-groups contributing most to the 1950 index change were lumber, roofing materials (cedar shingles) and electrical equipment and fixtures.

## 2.—Wholesale Price Index Numbers of Residential Building Materials, 1940-50 and Monthly Indexes 1949 and 1950

(1935-39=100)

Year and Month	Com- posite Index	Principal Components								Other Materials

**World Wholesale Price Indexes.**—Price changes within different countries have varied widely since the years before the War. Comparisons between Canadian wholesale price changes and those that have occurred in other countries are provided in Table 3.

### 3.—Index Numbers of Wholesale Prices in Canada and other Countries, 1939 and December, 1945 and 1947-49

NOTE.—Base: 1937=100 except for France, where 1938=100 and Mexico, where 1939=100. For India the base was changed after 1946 to September, 1938–August, 1939=100.

#### Subsection 2.—Cost-of-Living Index

**Purpose and Interpretation.**—The Dominion Bureau of Statistics cost-of-living index measures the influence of changes in retail prices of goods and services upon the cost of a representative urban wage-earner family budget.

The index budget was calculated from annual purchases reported by a group of 1,439 typical wage-earner families in the cities of Charlottetown, P.E.I., Halifax, N.S., Saint John, N.B., Quebec, Que., Montreal, Que., Ottawa, Ont., Toronto, Ont., London, Ont., Winnipeg, Man., Saskatoon, Sask., Edmonton, Alta., and Vancouver, B.C. These expenditures covered the year ended September, 1938.

The families surveyed averaged 4.6 persons and the majority had two or three children. Family earnings in many cases were supplemented by minor sources of income; total incomes for these families were heavily concentrated between \$1,200 and \$1,600. They ranged, however, from as low as \$600 up to about \$2,800 per annum. There were, approximately, two tenant families to every one home-owning

family, and about one family in three operated an automobile. The general distribution of living expenditures for the year ended Sept. 30, 1938, for these families which represented all the principal racial groups in Canada was as follows:—

<i>Budget Group</i>	<i>Average Expenditure</i>	<i>Percentage of Total</i>
	\$	
Food.....	443.0	31.3
Shelter.....	269.5	19.1
Fuel and light.....	90.5	6.4
Clothing.....	165.8	11.7
Home furnishings.....	125.7	8.9
Miscellaneous.....	319.4	22.6
Health.....	60.8	4.3
Personal care.....	23.9	1.7
Transportation.....	79.3	5.6
Recreation.....	82.1	5.8
Life insurance.....	73.3	5.2
TOTALS.....	1,413.9 <sup>1</sup>	100.0

<sup>1</sup> Directly represented in the index. Other miscellaneous outlays brought the total family living expenditure to \$1,453.8.

A new survey of family income and expenditure was taken in October, 1948, and revision of the cost of living based on information obtained from this survey is under way.

**Cost-of-Living Index and Prices of Staple Foods.**—By October, 1948, the cost-of-living index had reached 159·6. That point marked the beginning of a plateau which lasted nearly a year and a half. Between October, 1948, and February, 1950, the index averaged 160·6, and did not vary more than 2·1 points above or below that level. However, by March, 1950, higher food prices and rents raised the index to 163·7 as against 161·6 at February and a fairly steady increase was shown to the end of the year.

#### 4.—Annual Index Numbers of Living Costs, 1940-50, and Monthly Index Numbers, 1949 and 1950

(1935-39=100)

NOTE.—Figures for the years 1913-34 will be found at p. 863 of the 1946 Year Book and those for 1935-38 at pp. 954-955 of the 1948-49 edition.

Table 5 presents average and relative prices (basis: 1935-39=100) of staple foods that enter into the food index, a very important factor in the cost of living. The details given in regard to these staple commodities for the years from 1939 to 1949 and for each month for the latest two years will be found useful to students of cost-of-living trends.

### 5.—Average and Relative Retail Prices of Staple Foods, 1940-50, and by Months, September, 1948, to December, 1950

(Basis for relative prices: 1935-39=100)

**Regional Changes in Living Costs.**—In 1941, the Bureau established cost-of-living indexes for eight regional cities covering the period since August, 1939. These indexes, for the cities shown in Table 6, are patterned after the official cost-of-living series for Canada and include group indexes for food, fuel, rent, clothing, home furnishings and services, and miscellaneous items. The budget quantities employed for these calculations have been computed for each city from expenditure records of wage-earner families in the year ended Sept. 30, 1938. For the city records, August, 1939=100 is the base used instead of the five-year period 1935-39.

The city indexes are not designed to show whether it costs more or less to live in one city than in another, and should not be used for that purpose. Their function is to show the extent of price change in each city.

### 6.—Index Numbers of Living Costs in Eight Cities, 1940-50, and by Months, 1948-50

(August, 1939=100)

NOTE.—Figures on this base for years 1929-39 will be found in corresponding tables in previous Year Books beginning with the 1942 edition.

**World Cost-of-Living Indexes.**—In order to place changes in Canadian retail prices in perspective with those occurring in other countries, Table 7 gives cost-of-living indexes for selected countries and dates. It will be noted that increases

in the cost of living have been world-wide. These indexes measure price change only and should not be used to compare living costs from country to country.

### Section 3.—Index Numbers of Security Prices

Security prices have long been utilized in statistical measurements related to economic phenomena. They are generally sensitive to changing business conditions, although this valuable characteristic is sometimes overshadowed by the fact that their movements may be influenced greatly by speculative interest very remotely associated with underlying economic conditions. Thus, in 1928 and 1929, common-stock prices advanced far beyond levels indicated by business profits and prospects. Security-price trends have also been at variance with other business indexes during the First and Second World Wars.

**Common Stocks.**—During the first six months of 1949, a general weakness in common-stock prices brought the index to 99.6 for June as compared to 115.8 for December, 1948. The decline in the index coincided with weakness in security prices in the United States where a moderate business recession occurred during the first half of 1949. However, stock-price trends were reversed during the second half of 1949 and by December, the investors index had risen over 18 points above the June low. This decidedly firmer tone continued during the first half of 1950. The monthly index for 106 common stocks moved up from 117.9 for December, 1949, to 130.9 for June, 1950. Increasing international tension, which finally resulted in open conflict in Korea late in June, had an immediate depressive effect on the market. By July 13 the investors index had fallen to a low of 119.3. Subsequently, however, investors took a longer range view of the situation and the possible effect of war contracts was reflected in higher price levels for most common stocks.

**Preferred Stocks.**—Preferred stock prices paralleled movements for industrial and utility common stocks during the first half of 1950. A gradual rise in the index from a level of 150.7 in December, 1949, to 158.2 for June, 1950, was recorded. Prices subsequently declined to an index of 154.6 in July following the initial speculative assessment of the Korean situation and rose again to 160.2 at the end of December.

**Mining Stocks.**—Mining stocks pursued a divergent course during 1950. This was accentuated following the outbreak of war in Korea late in June. Up to that time the gold stock index had declined narrowly from 74.2 for December, 1949, to 70.2 for June, 1950. In July prices for gold stocks moved sharply lower to close the month at 58.5. Base metal stocks, on the other hand, after an initial drop to 120.3 in mid-July from an average level of 130.8 for June jumped to 132.3 by July 27. This compared with 128.4 for December, 1949. The composite index for 30 representative mining issues stood at 82.3 for the final week of July and compared with a level of 92.4 in December, 1949, and 88.2 in December, 1950.

## Section 4.—Index Numbers of Bond Yields

The exceptional financial requirements of the war years of 1914-18 turned the federal authorities to the domestic market, a field that had hitherto served mainly the needs of the provinces and municipalities. Historical records of long-term bond yields in the domestic market prior to 1914 are obtainable, therefore, from provincial and municipal sources only. A record of Ontario issues from 1900 to date is available and was utilized for the first long-term bond-yield index constructed by the Dominion Bureau of Statistics. The relatively long period for which the record has been preserved makes this series of considerable value.

Since the First World War, however, the growing importance of federal financing in the domestic market has made it advisable to supplement the Ontario series with the federal index of long-term bond yields shown in Table 11. This series (1935-39=100) has been computed from January, 1937, on the basis of yields computed from a 15-year, 3 p.c. theoretical issue. Quotations for the theoretical yields are computed by the Bank of Canada.

Evidence of underlying strength for government obligations continued to be felt during 1950 as indicated by the narrow limits which Government of Canada long-term bond yields moved during the year. From the index of 90.3 for December, 1949, the yield rose to 91.0 in July, 1950. The slightly easier price tone for government obligations in July reflected the sharp deterioration in the international situation.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

### Section 1.—Combined Statistics of Public Finance for all Governments\*

The purpose of this Section is to present combined statistics of public finance for all governments of Canada—federal, provincial and municipal. Information in greater detail is given for each form of government in Sections 2, 3 and 4.

**Combined Revenues and Expenditures.**—Tables 1 and 3 present over-all details of federal, provincial and municipal finance by combining ordinary and capital account revenues and expenditures for each level of government. Since all expenditure—ordinary or capital—is included, amounts provided for debt retirement have been excluded to avoid duplication. The revenues and expenditures presented in these tables are on a 'net' basis since the following revenues have been treated as offsets to their corresponding expenditures: shared-cost contributions of other governments, institutional revenue and certain other sales of commodities and services, and interest revenue exclusive of sinking-fund earnings. Certain inter-governmental transfers such as the payments of the Federal Government to the provinces for the vacation of tax fields are neither conditional grants nor payments for services and cannot, therefore, be offset against any specific expenditure. These are set out separately in Tables 1 and 3 so as to show grand totals of revenue and expenditure for each level of government as well as totals excluding inter-governmental transfers.

Discrepancies between the amounts shown in Tables 1 and 3 as inter-governmental transfers are due to variations in the fiscal year ends and accounting practices of governments.

**Combined Debt.**—The municipal debt figures in Tables 5 and 6 include estimated figures for Quebec, as municipal statistics for 1946 and 1947 for that Province are not available. It will be noted that the total combined direct debt for 1947 showed a reduction of over \$400,000,000 as compared with the previous year. This was due mainly to the fact that the Federal Government was able to avoid borrowing in 1947 to finance current operations and reduced its funded debt by \$520,000,000. However, increases in total indirect debt of Provincial Governments resulted in a net general decrease in the combined direct and indirect debt of approximately \$166,000,000.

\* Revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

<sup>1</sup> Includes estimates for Quebec as statistics for 1947 are not available.<sup>2</sup> Includes \$100,000,000

deposit certificates and \$750,000,000 six-month notes.

<sup>3</sup> Excludes provincial debt accounts.<sup>4</sup> Includes both guaranteed and unguaranteed issues of the Canadian National Railways and National Harbours Boards at Mar. 31 to correspond with fiscal year end of the Federal Government.<sup>5</sup> Includes deposits in lieu of mortgaged property sold, held by the Canadian National Railways.<sup>6</sup> Excludes contingent liability in respect of Federal Government guarantee of deposits maintained by chartered banks in the Bank of Canada, miscellaneous guarantees the amounts of which were not finally determined or were indeterminate at the close of the fiscal year, and contingent liabilities of the Canadian National Railways.**Section 2.—Federal Public Finance\***

A sketch of public finance, from the French regime to the outbreak of the First World War, appears at pp. 742-743 of the 1941 Year Book, while detailed sketches *re* tax changes from 1914 to 1938 will be found in issues of the Year Book beginning with the 1926 edition. An outline of the financing of Canada's war effort, including the more important changes in taxation during the war years from 1939 to 1945 is given at pp. 918-923 of the 1945 Year Book. Tax changes included in the 1945-46 and 1946-47 Budgets are given at pp. 883-884 of the 1946 edition, those in the 1947-48 Budget at pp. 952-953 of the 1947 edition, those in the 1948-49 Budget at p. 964 of the 1948-49 edition, and those in the 1949-50 Budget at p. 1002 of the 1950 edition.

**The 1950-51 Budget.**—The Budget for the fiscal year ending Mar. 31, 1951, was presented to Parliament on Mar. 28, 1950.† The forecast of revenue for the fiscal year 1950-51 (after tax changes) was \$2,430,000,000 and the forecast of expenditures

\* Revised, except as otherwise indicated, under the direction of Dr. W. C. Clark, C.M.G., Deputy Minister, Department of Finance, Ottawa.

† Copies of the 1949-50 Budget may be obtained on application from the Department of Finance, Ottawa.

was \$2,410,000,000. The estimated surplus was accordingly \$20,000,000. These forecasts compare with actual revenue in 1949-50 of \$2,580,140,615, actual expenditures of \$2,448,615,662, and a surplus of \$131,524,953.

The principle features of the tax changes were:—

*Corporation Income Tax.*—Legislation was introduced to permit closely held companies to pay a flat 15-p.c. tax on undistributed income and thus create a fund which would be tax free on receipt by the shareholders of such companies when made available under specified conditions.

*Excise Taxes.*—Purchases by certain defined classes of institutions caring for orphans, the aged and the incapacitated were made exempt from the sales tax from July 1, 1950.

Ice cream, drinks prepared from fresh milk, and prepared whipping cream were made exempt from the sales tax.

The excise tax of 5 p.c. on toilet soaps was repealed.

*Loss in Revenue.*—It was estimated that the loss in revenue from the tax reductions would not exceed \$3,000,000. It was not possible to predict the revenue from the new 15-p.c. tax available to closely held companies in respect of accumulated earnings but it was expected to be at least sufficient to offset the loss in revenue from the tax reductions.

### Subsection 1.—Balance Sheets of the Federal Government

Table 7 gives the balance sheets of the Federal Government for 1946-50. Figures in earlier Year Books are not on a basis comparable to those in the present Table 7. On the asset side, accounts classified as *active* assets are shown; these represent cash or investments that are interest-producing or have a readily realizable cash value. On the liability side, such liabilities as have been ascertained and brought into the accounts are given. No liability is shown for interest accrued but not due, nor for current obligations incurred for supplies or services but not paid for at the end of the fiscal year. Indirect liabilities under guarantees are not reflected in the balance sheets, but are set out in a special schedule. (See p. 1013.)

The excess of liabilities over active assets, designated the *net debt*, is analysed in a statement appended to the Balance Sheet, and is apportioned to non-active assets, which include capital expenditures and non-productive investments, and to accumulated deficits in Consolidated Deficit Account.

<sup>1</sup> Direct liabilities only. Indirect liabilities or guarantees by the Government of Canada are given on p. 1013. <sup>2</sup> In the *Public Accounts* no charge was made against this item.

## Subsection 2.—Revenues and Expenditures

In the fiscal year ended Mar. 31, 1950, revenues declined by \$191,254,460 from the previous year while expenditures increased by \$272,723,328. The surplus of revenues over expenditures for the fiscal year amounted to \$131,524,953. Total revenues aggregated \$2,580,140,615 compared with \$2,771,395,075 in 1948-49. Tax revenues were \$113,025,197 less than for the previous year and non-tax revenues decreased by \$7,348,193. Special receipts and other credits declined by \$68,528,976 due largely to smaller receipts from sales of surplus war assets.

Total expenditures were \$2,448,615,662 in 1949-50 compared with \$2,175,892,334 in the previous year. Demobilization and reconversion expenditures increased by \$43,032,825 over 1948-49. Ordinary expenditures increased by \$127,810,167 in 1949-50 and accounted for 69 p.c. of total expenditures during the year.

Capital expenditures totalling \$22,923,586 and special expenditures totalling \$37,927,899 in 1949-50 were both higher than in the previous year.

The increase in the Canadian National Railways deficit was chiefly responsible for the increase in expenditure on account of Government-owned enterprises which totalled \$52,361,663 in 1949-50 compared with \$39,662,806 in 1948-49.

<sup>1</sup> Includes a write-down of assets amounting to \$62,938,239.<sup>2</sup> Reserve against estimated losses

on wheat marketing guarantees applicable to the fiscal year 1938-39.

<sup>3</sup> Reserve against estimated

losses on wheat marketing guarantees applicable to the fiscal year 1939-40 to the extent of \$27,000,000.

<sup>4</sup> Includes \$25,000,000 as reserve against possible losses on assets.<sup>5</sup> Includes \$13,963,218 subsidy

payments on oats and barley used as feed for live stock.

<sup>6</sup> Includes \$75,000,000 as reserve for possible

losses on assets.

<sup>7</sup> Includes Fraser Valley, B.C., Emergency Relief and Rehabilitation.

## 13.—Per Capita Revenues and Expenditures, Years Ended Mar. 31, 1931-50

NOTE.—The years marked with an asterisk (\*) are Census years; per capita figures for intercensal years are based on estimated populations (see p. 121) as at June 1 of the immediately preceding year in each case. See Tables 8 and 9 for the figures of revenues and expenditures on which this table is based. Figures for the years 1868-1912, inclusive, will be found at p. 849 of the 1938 Year Book; those for 1913-30 at p. 932 of the 1945 edition.

Year	Per Capita				Year	Per Capita

<sup>1</sup> Excludes refundable portion. <sup>2</sup> Includes interest on investments, profits of the Bank of Canada and the Central Mortgage Bank and other items. <sup>3</sup> Includes other items not listed. <sup>4</sup> In 1950 the Department of Mines and Resources was reorganized into the three Departments—Citizenship and Immigration, Mines and Technical Surveys, and Resources and Development. <sup>5</sup> Included in Department of Finance. <sup>6</sup> This Department was dissolved in 1949. <sup>7</sup> Includes special expenditures on the Chalk River Project and other activities of the National Research Council.

**Subsection 3.—Analysis of Revenues from Taxation**

Table 15 gives total expenditures that have been met by taxation and from all sources of revenue for each of the fiscal years ended Mar. 31, since 1940. During the war years expenditures far exceeded revenues but in 1947 taxation met over 92 p.c. of expenditures and revenue from all sources exceeded expenditures. For 1948 and 1949 revenues from taxation alone exceeded total expenditures by a substantial amount due to the maintenance of high taxation levels and a greatly increased national income. In 1950 total expenditure was \$131,524,953 below total revenue, 95 p.c. of which was provided by taxation.

15.—Relationship of Total Expenditures to Taxation Revenue and to Total Revenue,  
Years Ended Mar. 31, 1940-50

Year	Total Expenditures	Taxation Revenue	Total Revenue	Percentages of Total Expenditures Provided from—	
				Taxation	All Revenue
	\$	\$	\$	p. c.	p. c.
1940.....	680,793,792	467,684,963	562,093,459	68.70	82.56
1941.....	1,249,601,446	778,175,450	872,169,645	62.28	69.80

1948.....	2,195,626,454	2,452,075,395	2,871,746,110	111.68 <sup>1</sup>	130.79 <sup>1</sup>
1949.....	2,175,892,334	2,436,142,276	2,771,395,075	111.96 <sup>1</sup>	127.37 <sup>1</sup>
1950.....	2,448,615,662	2,323,117,079	2,580,140,615	94.87	105.37 <sup>1</sup>

<sup>1</sup> See text at foot of previous page for explanation.

The revenues from customs and excise duties, the two most important sources prior to the First World War, amounted in 1950 to less than 20 p.c. of the revenue derived from taxation and revenue from income tax formed 55 p.c. of the tax revenue.

The following analyses of taxation revenues are confined to excise duties, excise taxes, income tax revenue and succession duties; customs receipts constitute a single item in the *Public Accounts* and cannot be further analysed here.

Excise Duties and Taxes\*

Excise duties proper are presented here together with a summary of the excise tariff and statistics arising as a by-product of administration, such as the quantities of grain and other products used in distillation and the quantities of excisable goods taken out of bond.

**Canadian Excise Tariff.**—The following is a statement of the Canadian excise tariff, as at Jan. 1, 1950:—

- |  |   |
|--|---|
| <p>1. Spirits distilled in Canada, per proof gal. \$11.00<br/>         Canadian brandy, per proof gal. 9.00<br/>         Except spirits as follows:—<br/>             (a) used in a bonded manufactory for medicines, extracts, etc., per proof gal. 1.50<br/>             (b) used in a bonded manufactory for perfumes, per proof gal. 1.50<br/>             (c) used for chemical compositions approved by Governor in Council, per proof gal. 0.15<br/>             (d) sold to licensed druggists for pharmaceutical preparations, per proof gal. 1.50<br/>             (e) distilled from native fruits and used by a licensed wine manufacturer for fortification of native wines, per proof gal. 1.50</p> <p>2. Spirits imported (in addition to any of the duties otherwise imposed), per proof gal. 0.30</p> | <p>3. Beer or Malt Liquor:—<br/>         Brewed in whole or part from any substance other than malt, per gal. \$ 0.45</p> <p>4. Malt:—<br/>             (a) produced in Canada and screened, per lb. 0.16<br/>             (b) imported, per lb. 0.16</p> <p>5. Tobacco, Cigars and Cigarettes:—<br/>             (a) manufactured tobacco, per lb. 0.35<br/>             (b) cigarettes weighing not more than 2½ lb. per M, per M. 6.00<br/>             (c) cigarettes, weighing more than 2½ lb. per M, per M. 11.00<br/>             (d) Canadian raw leaf tobacco, when sold for consumption, per lb. 0.20<br/>             (e) cigars, per M. 1.00</p> |
|--|---|

\* Revised by the Customs and Excise Division, Department of National Revenue.

A drawback of 99 p.c. of the duty may be granted when domestic spirits, testing not less than 50 p.c. over proof, are delivered in limited quantities to universities, scientific or research laboratories, or to any bona fide public hospital for medicinal purposes only.

**Revenues from Excise Duties.**—In the year ended Mar. 31, 1950, tobacco, including cigarettes, supplied about 49 p.c. of the revenue from excise duties.

#### 16.—Gross Excise Duties collected, Years Ended Mar. 31, 1945-50

Item	1945	1946	1947	1948	1949	1950

<sup>1</sup> Classification of this figure not available.

The quantity of spirits manufactured has fluctuated greatly since 1920, varying from the low of 2,356,329 proof gal. in that year to the high of 35,555,059 proof gal. recorded in 1945.

**Alcohol and Tobacco Taken Out of Bond.**—For the amounts of spirits, malt liquor, malt and cigarettes taken out of bond for consumption in 1950 see p. 844.

## Excise Taxes

The statistics given in Table 18 represent gross collections by the Excise Division of the Department of National Revenue; they differ from the figures shown in Table 10 (in the column "Sales and Other Excise Taxes"), which represent net revenues received, by the amounts of the refunds shown in footnote 1 to Table 18.

<sup>1</sup> Includes refunds and drawbacks of \$194,718,627 in 1945; \$114,005,355 in 1946; \$29,845,228 in 1947 \$10,683,238 in 1948; \$12,871,403 in 1949; and \$11,784,520 in 1950.

### Income Tax\*

The income tax was instituted in 1917 as a part of what was known as war-tax revenue. Before the outbreak of the Second World War, it had become a permanent and important part of the taxation structure and the chief source of raising ordinary revenue. In many respects, it is an ideal form of direct taxation and the experience and machinery for the collection of this tax has been built up over a long period of years.

During the Second World War, income tax rates were increased to help finance the War, and a compulsory savings feature was adopted with respect to both individuals and corporations. Approximately \$290,000,000 refundable portion was collected from individuals under the personal income tax, and approximately \$260,000,000 from individuals and corporations under the excess profits tax. Repayment of the refundable portion of individual income tax was completed in 1949, and approximately one-half of the refundable portion of excess profits tax was repaid by 1950.

Since the end of the War, the weight of individual income tax was reduced each year up to and including 1949, and more generous exemption allowances were given. However, the expansion of personal incomes and the growth of the labour force offset to a considerable extent the effect of the reduction in rates. Corporation excess profits tax rates were also reduced and, as of Jan. 1, 1948, finally abandoned. Corporation income tax rates were raised from 18 p.c. to 30 p.c. concurrently with the dropping of the excess profits tax. In 1949, corporation income tax rates were changed to 10 p.c. on amounts up to \$10,000, plus 33 p.c. on amounts in excess of \$10,000, in the case of unconsolidated corporations.

The income tax revenue shown in Table 19 as shown in the *Public Accounts* represents collections made by the Taxation Division of the Department of National Revenue under the authority of the Income War Tax Act (c. 97 R.S.C. 1927) as amended and the Income Tax Act† (11-12 Geo. VI c. 52).

Details of income tax changes in the Budgets of 1945-46, 1946-47, 1947-48, and 1948-49 are given at pp. 1008-1009 of the 1948-49 Year Book. Details of the tax changes in the 1949-50 Budget are given at p. 1002 of the 1950 Year Book. The change made in income tax rates in the 1950-51 Budget concerned corporation taxes only and is given at p. 979.

The tax on dividends and interest and on rents and royalties is levied at the rate of 15 p.c. on payments going to non-residents of Canada. The payments subject to tax include income from an estate or trust, alimony payments, rents from real property, and rents, royalties or similar payments for the use in Canada of property, trade names or inventions. There is no non-resident tax on interest from Government of Canada bonds or bonds guaranteed by the Government of Canada or where the interest is payable in other than Canadian currency. Where the payments are for interest from bonds of or guaranteed by a province of Canada, or are dividends paid by a wholly owned subsidiary to its parent company outside Canada the rate of tax is only 5 p.c.

The gift tax is imposed at the rate of 10 p.c. on gifts up to \$5,000 and at rates varying from 11 p.c. to 28 p.c. on gifts from \$5,000 to \$1,000,000 or over.

\*More detailed information is given in the annual report "Taxation Statistics" published by the Taxation Division, Department of National Revenue.

†The Income Tax Act which was assented to June 30, 1948, superseded the Income War Tax Act.

**Collections by the Department of National Revenue on a Fiscal-Year Basis.**—Collection statistics are gathered at the time the payments are made and, therefore, have the value of being very up-to-date. Their timeliness has been enhanced within the past few years by the adoption of the "pay-as-you-go" system which results in collecting tax substantially during the year in which the income is earned and, on the average, about ten months prior to the actual filing of an income-tax return by the taxpayer. The payments on behalf of most taxpayers, however, are made by their employers and a cheque from one employer may cover the tax payments of hundreds of employees. At this stage, therefore, it is not possible to link the moneys received to the individuals who are, in the final analysis, contributing the tax. Collection statistics, as such, for this reason are not capable of being closely related to the persons who are being taxed and any statistical tables that attempt to describe the taxpayer, such as by occupation or income class, must be based on the income-tax return which is filed by the taxpayer many months after the payment of his tax. However, collection statistics, if interpreted along with the tax rate, do serve the purpose of indicating the general trend of income upon which tax is levied well in advance of the assessment data.

The statistics given in Table 20 represent collections on a government fiscal-year basis under the three Acts administered by the Taxation Division, Department of National Revenue.

Residents of Newfoundland commenced to pay federal income tax in July, 1949, and these collections are included in the figures for the fiscal year ended Mar. 31, 1950.

**Individual Income-Tax Statistics.**—Individual income-tax statistics are presented herein on a calendar-year basis. These data are compiled from a 10-p.c. sample of all returns received and the figures are taken from the returns as declared by the taxpayer prior to any changes that may be made after scrutiny by the assessors.

**Corporation Income-Tax Statistics.**—In the following tables, corporation statistics are presented on a taxation-year basis prior to assessment. The data have been extracted and compiled from the returns shortly after they have been filed and are as declared by the taxpayer without the scrutiny or revision of the Department of National Revenue. Provincial figures contain an unavoidable bias in favour of Ontario and Quebec, caused by the fact that many large companies which operate across Canada file their returns in one or other of these two Provinces.

### Succession Duties

The first imposition of succession duties in Canada was in 1892, when Nova Scotia, New Brunswick, Quebec and Ontario enacted legislation of this nature. Legislation was passed in the other provinces in the following years: Manitoba, 1893; Prince Edward Island and British Columbia, 1894; Saskatchewan and Alberta, 1905.

Succession duties have grown to be an important if fluctuating part of provincial revenues and Table 25 shows the receipts from this source from 1941.

In 1947 seven provinces withdrew from the succession duties field as part of general agreements for the removal of duplication of direct taxation negotiated with the Federal Government. These agreements succeeded the expiring Wartime Tax Agreements, and followed the general terms of the offer set out in the Budget

Speech of June 27, 1946. This offer was drawn up in such terms that any province could elect to enter or not to enter into an agreement with the Federal Government and, in respect of succession duties, provided that even a province that did enter into an agreement could, if it wished, retain its own levies. As previously mentioned, seven of the then existing provinces, namely, Prince Edward Island, Nova Scotia, New Brunswick, Manitoba, Saskatchewan, Alberta and British Columbia, accepted this offer and elected to repeal their own succession duties for the period from Apr. 1, 1947, to Mar. 31, 1952.

The new province of Newfoundland made an agreement with the Federal Government in 1949 and elected not to impose succession duties from Apr. 1, 1949 to Mar. 31, 1952. For this period, therefore, provincial succession duties will be limited to those provinces which have not accepted the Federal Government offer before the period expires.

The Federal Government provided in the 1946 Budget that, as from Jan. 1, 1947, the rates of federal duty would be doubled, and that where a provincial levy was continued a credit would be allowed against one-half of the federal duty for duty paid to a province. The existing situation, therefore, is that in provinces that have withdrawn their duties the previous combination of federal and provincial rates has been supplemented by a single federal duty at double the previous federal level, which in most cases results in the continuation of a total duty approximately the same as previously levied under the two duties combined. On the other hand, in the provinces that have not withdrawn their duties, the doubled rates of federal duty apply but may be reduced up to one-half by a credit for the duty paid to the province.

The Dominion Succession Duty Act was enacted as 4-5 Geo. VI, c. 14. Certain amendments were made to the Act by 5-6 Geo. VI, c. 25; 7-8 Geo. VI, c. 37; 8-9 Geo. VI, c. 18; and the doubling of rates and provision of the tax credit mentioned above by 10 Geo. VI, c. 46. Two important amendments were made to the Act in 1948. The former provision by which bequests to non-profit charitable organizations in Canada were exempt only up to 50 p.c. of the aggregate net value of the estate was changed to remove this limit entirely. A second change exempted from duty all successions derived from an estate of an aggregate net value not exceeding \$50,000: formerly this exemption had applied only up to an aggregate net value of \$5,000. While estates in excess of \$50,000 remain dutiable in full, it was provided at the same time that in no case would the duty reduce the value of the estate below \$50,000.

Revenue from the federal duty is given in Table 25.

A common feature of both federal and provincial duties is the variation of rates by the degree of relationship of the beneficiary to the deceased. The four classes of beneficiaries that are established under federal law (see p. 999) have, for example, specific rates that change with each classification, while in Ontario there are three classes of beneficiary with different rates of duty attached to each class. It is also a common feature of both federal and provincial Acts for an initial rate of duty to be charged based on the total value of the estate and an additional rate based on the bequest received by each individual. Thus, in the case of the Federal Government, a person who receives a bequest of \$50,000, say, out of an estate of \$500,000 is charged the rate for a \$500,000 estate plus an additional rate for \$50,000, and the total rate is then applied in calculating the tax on his bequest.

Double taxation of estates resulting from taxation of the same property by more than one province has been common in the past, but the withdrawal of seven of the provinces from the field has considerably reduced this problem. In the international field, dual taxation has been dealt with by way of tax conventions. Such a tax convention between Canada and the United States was signed on June 8, 1944. One of the terms of this convention is that shares in a corporation organized in or under the laws of the United States or any of the individual States shall be deemed to be property situated within the United States, and shares in a corporation organized in or under the laws of Canada, or of the provinces or territories of Canada, shall be deemed to be property situated within Canada.

An agreement respecting succession duties between Canada and the United Kingdom was signed June 5, 1946.

Under these circumstances, the difficulties of working out succession duty tables so as to show the combined effects of federal and provincial duties is realized. The best that can be done here is to choose typical estates in the main classes laid down in the legislation and give a picture of the combined duties applicable in such cases. This has been attempted in the following series of tables in the hope that it will be useful in presenting to the student of this subject a general knowledge of the incidence of succession duties in Canada under conditions existing at present.

## 25.—Federal and Provincial Net Receipts from Succession Duties, Respective Fiscal Years Ended in 1941-49

NOTE.—The fiscal years of the provinces end on the following dates: P.E.I., Dec. 31 to 1942 and thereafter Mar. 31; N.S., Nov. 30; N.B., Oct. 31; Que., Mar. 31; Ont., Mar. 31; Man., Apr. 30 prior to 1947 and Mar. 31 thereafter; Sask., Apr. 30 prior to 1947 and Mar. 31 thereafter; Alta. and B.C., Mar. 31. Figures for the years 1921-40 will be found at p. 1050 of the 1950 edition of the Year Book.

Year	Federal <sup>1</sup>	Prince Edward Island	Nova Scotia	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia
	\$	\$	\$	\$	\$-	\$	\$	\$	\$	\$

<sup>1</sup> Includes "Funds in lien of Succession Duties". The figures in this column are for the fiscal years ended nearest to Dec. 31 of the year stated. <sup>2</sup> Ten months; Act came into force June 14, 1941.

<sup>3</sup> Fifteen months. <sup>4</sup> Eight months. <sup>5</sup> Eleven months. <sup>6</sup> Figures for all provinces, except Quebec and Ontario, cover arrears for prior years, see text p. 998.

**Federal Duty.**—Beneficiaries are divided into four classes, as follows:—

- (1) Widow or dependent child or dependent grandchild.
- (2) Husband; parent; grandparent; child over 18 years of age, not infirm; son- or daughter-in-law.
- (3) Lineal ancestor other than parent or grandparent; brother, sister or their descendant; uncle or aunt or their descendant.
- (4) Others.

No duty is payable on estates not exceeding \$50,000, or on bequests up to \$1,000 to any one individual, nor is duty levied on gifts to the Federal Government or provinces, on residential property of certain diplomatic or consular officials, on

pensions administered by the Canadian Pensions Commission or those payable by Allied Nations for war services nor on insurance moneys or annuities if the person with whom contract was made was domiciled outside Canada at the time of death. Provision is made for increased exemptions and reduced duties in the case of those dying as a result of war service. Bequests to non-profit charitable organizations in Canada are exempt.

Widows are exempt up to \$20,000, dependent children to \$5,000 each and, in cases where dependent children do not benefit, the widow's exemption is increased by \$5,000 for each child who does not benefit. In the case of dependent orphaned children, there is a further exemption of \$15,000 (in addition to \$5,000) divisible proportionately among such orphans according to their number and the value of each individual benefit. Duty is payable on the excess only when the limit is passed, i.e., these exemptions are deductible exemptions.

Gifts made during the lifetime are exempt if the transfer was carried out more than three years prior to the death of the deceased and the recipient of such gifts secured full possession at the time of the transfer and the donor (the deceased) thereafter did not retain any rights therein or secure any benefits therefrom.

If gift tax payable under the provisions of the Income Tax Act has been paid in connection with the transfer made by a deceased person during his lifetime then no succession duty is payable in respect of such gift except to the extent that succession duty thereon is in excess of the gift tax.

Examples of the rates of duty and duty levied are given in Table 26.

**26.—The Incidence of Succession Duties in all Provinces (except Quebec and Ontario) on Typical Estates**

Class	Aggregate Net Value	Dutiable Value	Rate	Duty

	1,000,000	1,000,000	44·7	447,000

**The Incidence of Combined Federal and Provincial Succession Duties.—**

Under the new tax agreements outlined at pp. 997-998, only the Provinces of Quebec and Ontario, which have not entered the agreement, have retained their own succession duties. As already mentioned, seven provinces elected to repeal

their succession duties for the period from Apr. 1, 1947, to Mar. 31, 1952, and one (Newfoundland) for the period Apr. 1, 1949, to Mar. 31, 1952. As a consequence, the tables showing combined rates of federal and provincial duty for each province, which appeared at pp. 942-950 of the 1946 Year Book, have been deleted with the exception of those for the two above-mentioned provinces. The new condition of doubled federal duties and a tax credit up to 50 p.c. for the provincial duty has been taken into account in Tables 27 and 28. The rates under the heading "Dominion Duty" shown in the 1946 Year Book have been doubled and under "Combined Duty" the greater of (1) the amount of the federal duty (doubled rates), or (2) the provincial duty plus one-half the federal duty, is given.

In these two tables, the beneficiaries under all the classes show the duties collectable where the estate of given value is left to one beneficiary only, since it would be impossible to cover the many different classifications, exemptions and saving clauses to be found in the legislation of the respective provinces. In every case the estate is assumed to be wholly situated within the province and the beneficiary domiciled therein to be the sole heir. The reader is referred to the legislation and to the taxing authority shown under each provincial heading for more complete information.

*Quebec.*—The current legislation under which succession duties are collected is c. 18 of 1943. As stated at p. 999, the following text and table can give only a broad outline of such duties as applied to comparable classes of beneficiaries in other provinces. Full details regarding other cases may be obtained from the Act or from the Collector of Succession Duties, Provincial Revenue Offices, Quebec.

Under the legislation, beneficiaries are divided into three classes, as follows:—

- (1) Those in direct ascending or descending line between consort, between father- or mother-in-law and son- and daughter-in-law, between step-father or step-mother and step-son and step-daughter. There is no limitation of degree in the direct ascending or descending line between these relationships.
- (2) Those in collateral line including a brother or sister, or descendant of a brother or sister of the deceased, or to a brother or sister, or son or daughter of a brother or sister, of the father or mother of the deceased.
- (3) Others.

No duty is payable when the aggregate value of the property passing to persons in Class (1) does not exceed \$10,000. This sum is increased by \$1,000 for each child who has survived or has left surviving descendants. No duty is payable on bequests up to \$1,000 to beneficiaries in Class (3) who have been in the employ of the testator for five years or more. In estates that devolved prior to Feb. 22, 1949, no duty is payable on legacies for religious, charitable or educational purposes in Quebec and the same privilege is extended to legacies for similar work outside that Province, provided that the province or State within which the work is to be carried out extends reciprocal privileges under its succession duty laws. Since February, 1949, all legacies, gifts and subscriptions for religious, charitable and educational purposes are tax-free, regardless of the country, province or State where the institutions benefiting therefrom are located.

## 27.—The Incidence of Federal and Quebec Succession Duties on Typical Estates

Class	Aggregate Net Value	Federal Duty <sup>1</sup>			Provincial Duty			Combined Duties <sup>1</sup>

	1,000,000	1,000,000	44·70	447,000	1,000,000	34·50	345,000	568,500

<sup>1</sup> The rates of federal duty shown are those actually applied but a credit may be made to the taxpayer up to one-half of this amount on account of duty paid to the provinces, see p. 998.

*Ontario.*—The current legislation on succession duties is R.S.O. c. 1, 1939 (Second Session), as amended, and full information may be obtained on application to the Succession Duty Office, Treasury Department, Parliament Buildings, Toronto.

Beneficiaries are divided into three classes, as follows:—

- (1) Widow; child; husband; parent; grandparent; grandchild; son- or daughter-in-law.
- (2) Brother; sister; nephew; niece; uncle; aunt; cousin; child of nephew or niece.
- (3) Others.

No duty is payable on estates not exceeding \$5,000 in aggregate value, nor on estates not exceeding \$50,000 devised to persons in Class (1), nor on those not exceeding \$10,000 devised to persons in Class (2). Where the aggregate value of an estate does not exceed \$50,000 the shares in such an estate passing to beneficiaries in Class (1) are exempt from duty. The same rule applies to shares of beneficiaries in Class (2) where the aggregate value does not exceed \$10,000.

Where any person in Class (3) was in the employ of the deceased for at least five years immediately prior to his death, no duty is payable with respect to any benefits which such person derived from the deceased where the total value of such benefits is not in excess of \$1,000. Such benefits however, while exempt, are nevertheless taken as a factor in fixing the rates applicable to the dutiable portions of the estate.

Bequests for religious purposes to any religious organization which carries on its work solely in Canada, and bequests for charitable or educational purposes to any charitable or educational organization which carries on its work solely in Ontario are exempt from duty and are altogether ignored in the computation of duty on the portions of the estate that are not exempt. The same rule applies to the Canadian National Institute for the Blind, the Canadian Red Cross Society and other approved patriotic organizations.

<sup>1</sup> The rates of federal duty shown are those actually applied but a credit may be made to the taxpayer up to one-half of this amount on account of duty paid to the provinces, see p. 998. <sup>2</sup> Includes surtax on provincial duty. <sup>3</sup> Includes a surtax of 15 p.c. <sup>4</sup> Includes a surtax of 20 p.c. <sup>5</sup> Includes a surtax of 25 p.c.

**Subsection 4.—Subsidies and Loans to the Provinces**

**Subsidies.**—By the provisions of the British North America Act and subsequent arrangements entered into from time to time, the Federal Government makes certain annual payments to the provinces: these are summarized as follows.

**Interest on Debt Allowances.**—By the terms of the union of the provinces at Confederation in 1867, the Federal Government assumed all the outstanding debts and liabilities of the provinces and undertook to pay, except in the case of Ontario and

Quebec, interest at 5 p.c. on the amounts by which the actual per capita indebtedness of the provinces fell short of a basic debt allowance calculated at approximately \$25 per capita. On the subsequent entry of additional provinces into Confederation, similar arrangements were effected regarding the assumption of their pre-Confederation indebtedness. From time to time, adjustments have been made in the basis of calculating the debt allowances of provinces; moreover, the Federal Government pays interest at 5 p.c. per annum on the amounts by which the actual debts of the provinces, on their entry into Confederation, fell short of the allowed debts as adjusted. The aggregate annual payment by the Federal Government to the provinces in respect of interest on debt allowances is \$1,609,386.

*Allowances for Governments and Legislatures.*—Under the terms of the union, annual specific grants were made to the various provinces for the support of their governments and legislatures. These amounts vary with the population of the provinces, according to the following scale approved in 1907:—

Where population is—		\$
Under 150,000.....		100,000
150,000, but does not exceed 200,000.....		150,000
200,000, “ “ 400,000.....		180,000
400,000, “ “ 800,000.....		190,000
800,000, “ “ 1,500,000.....		220,000
Over 1,500,000.....		240,000

Aggregate annual allowances presently paid under this head amount to \$1,990,000, including the \$180,000 which became payable to Newfoundland upon union with Canada in 1949.

*Allowances per Head of Population.*—Under the British North America Act of 1867, a grant of 80 cents per head of population was allowed to each province. The British North America Act of 1907 provided that the grant would be paid to each province at the rate of 80 cents per head up to a population of 2,500,000, and at the rate of 60 cents per head for so much of the population as exceeded that number. Such allowances paid to the provinces in the year ended Mar. 31, 1950, amounted to \$9,206,987, including the payment made to Newfoundland on Apr. 1, 1949 and the adjustment paid to the Prairie Provinces as a result of new population estimates for 1949.

The Act to approve the terms of union of Newfoundland with Canada in 1949 provided for an annual subsidy equal to 80 cents per head of the population of the Province (being taken at 325,000 until the first decennial census after the date of union), subject to increase to conform with the scale of grants authorized by the British North America Act, 1907.

*Special Grants.*—In the case of certain of the provinces, grants have been added to the original scale of subsidies in view of special circumstances obtaining which, for the year ended Mar. 31, 1950, amounted in the aggregate to \$2,468,380 as follows:—

*Prince Edward Island.*—A special grant of \$195,000 less a deduction of \$39,120 (net grant of \$155,880).

*New Brunswick.*—An annual grant of \$150,000 since 1875 in consideration of the repeal of lumber duties reserved to the Province by the B.N.A. Act of 1867.

*Manitoba.*—A special grant on the basis of population amounting at present to \$562,500 per annum.

*Saskatchewan and Alberta.*—An annual sum as compensation for loss of public lands revenue, based on their respective populations and amounting at present to \$750,000 for Saskatchewan and \$750,000 for Alberta.

*British Columbia.*—A special grant amounting at present to \$100,000 per annum.

<sup>1</sup> See text at p. 1004.

<sup>2</sup> Includes "Additional Special Grants" (see text following) since 1946.

*Additional Special Grants.*—Additional special grants were voted annually to the Maritime Provinces, Manitoba, Saskatchewan and British Columbia up to 1941.

These additional special grants were suspended with the coming into force of the Dominion-Provincial Taxation Agreements. They were paid in 1947 and later years in the case of the three Maritime Provinces under the provisions of the Maritime Additional Subsidies Act, 1942. The terms of union with Newfoundland, 1949, provide for an additional annual subsidy of \$1,100,000 in recognition of the special problems of that province by reason of geography and its sparse and scattered population.

*Dominion-Provincial Taxation Agreements.*—The Dominion-Provincial Tax Rental Agreements Act, 1947, authorized the Federal Government to enter into Agreements with the provinces by which, in return for compensation, the Provincial Governments would agree to refrain from levying certain direct taxes for a period

of five years. These Agreements succeeded the Wartime Agreements which had lapsed (see pp. 900-901 of the 1946 Year Book). By the end of 1949, seven provinces—Prince Edward Island, Nova Scotia, New Brunswick, Manitoba, Saskatchewan, Alberta and British Columbia—had made new Agreements with the Federal Government and in 1950 Newfoundland signed an Agreement. On Sept. 14, 1948, Yukon made an Agreement similar to those made by the provinces.

The main purposes of these Agreements are to establish a more equitable system of taxation throughout Canada by reducing duplication of direct taxation and duplication of machinery for the collection of direct taxes, to give a greater measure of stability to the revenues of the provinces, and to enable the Federal Government, together with the Provincial Governments, to carry out national policies intended to maintain high levels of employment and production.

The Agreements continue the basic provisions of the Wartime Taxation Agreements, under which the provinces and their municipalities withdrew their income taxes, corporation income taxes and corporation taxes in return for compensation from the Federal Government (pp. 900-901 of the 1946 Year Book). There are, however, some additional provisions in the new Agreements which have resulted from the negotiations carried on between the governments in 1945 and 1946 at the Dominion-Provincial Conference meetings and since the Budget offer of June, 1946. The main features of this offer which have been embodied in the Agreements are outlined at pp. 883-884 of the 1946 Year Book.

The provinces are required, under the Agreements, to refrain from levying certain direct taxes, with the exception that they are permitted to impose a corporation income tax of 5 p.c. on the incomes of corporations attributable to their operations in the particular province. The revenue from this tax is to go to the individual province with a corresponding reduction in the amount of compensation paid to that province. The purpose of this provision is to assure, as nearly as possible, a uniform level of corporation income tax throughout Canada as between the agreeing and non-agreeing provinces. Under the Agreements it is provided, however, that a deduction will be made from the payment to the province corresponding to the amount of revenue that such a tax would have yielded even if the province does not impose the tax. The Agreements contain a set of rules by which the income of corporations is allocated to the various provinces in which they carry on business and further provide that this tax must be imposed under the same general provisions as are in the Income War Tax Act and the Income Tax Act, and that it will be administered on behalf of the provinces by the Federal Government and at the expense of the Federal Government.

Another provision concerns succession duties, a field not included in the Wartime Taxation Agreements. The provinces are now given the alternative of withdrawing from this field or remaining in it. If they withdraw, they receive the full amount of compensation otherwise payable under the Agreements (in the determination of which succession duties revenue was taken into account) but, if they remain, their payment is reduced by the amount of revenue loss which the Federal

Government suffers, through the credit allowed against the Federal Government duty for provincial duties on the same succession. All eight of the provinces which have negotiated Agreements with the Federal Government have taken the first alternative and withdrawn from the succession duties field (see pp. 997-999).

The Agreements do not prevent the imposition of royalties and rentals on natural resources by a province since such royalties and rentals are not regarded as taxes when they are of a nature conforming with the definitions set forth in the Agreements. The imposition of taxes on income derived from logging and mining operations, as defined in the Agreements, is allowed without any deduction from the payment to the province.

The significant differences between the 1946 Budget offer and the present Agreements are as follows:—

- (1) the provinces may choose between two methods of determining the amount of their guaranteed minimum annual payments (see text below);
- (2) the total guaranteed minimum annual payments to the provinces under these new methods are increased by \$25,100,000 to \$206,500,000;
- (3) these new guaranteed minimum annual payments are used as the bases for calculating the annual payments which are adjusted for increases in provincial population and gross national production per capita;
- (4) in the year following the termination of the Agreements, provincial taxpayers are to be allowed by the Federal Government tax credits of a maximum of 5 p.c. of the federal income tax, 50 p.c. of federal succession duties, and one-seventh of federal corporation income tax for taxes imposed by their Provincial Governments.

The guaranteed minimum annual payments are now computed in one of two ways. Under the first option a province may elect as a base \$12.75 per capita of its 1942 population, plus 50 p.c. of its income tax and corporation tax revenue in 1940, plus statutory subsidies payable in 1947; under the second it may choose \$15 per capita of its 1942 population plus statutory subsidies payable in 1947. A special arrangement was made for Prince Edward Island which is to receive a guaranteed minimum payment of \$2,100,000. This is slightly in excess of the amount determined by either of the two formulas. The guaranteed minimum annual payments to the provinces under the most favourable option and the estimated 1949-50 payments are shown in Table 31.

The actual amount payable in any one year is calculated according to the following method. The minimum payment is adjusted for changes in provincial population and gross national product per capita, as compared with the base year 1942, for each of the three calendar years immediately preceding the fiscal year of payment. These three amounts are then averaged and the resultant is the amount payable. If, in any of the three calendar years concerned, the amount calculated is less than the amount of the minimum payment, then the amount of the minimum payment is substituted. This method of computing the annual payments ensures that the revenues of the province will increase as the provincial population and gross national product per capita increases, and at the same time guarantees that the province will, at no time in the period covered by the Agreement, receive less than the stated minimum.

**31.—Guaranteed Minimum Annual Payments to Provinces<sup>1</sup> under Most Favourable Option and Adjusted Annual Payments, Years Ended Mar. 31, 1947-50**

Province and Option	Guaranteed Minimum Annual Payments <sup>1</sup>	1947 Payments <sup>1</sup>	1948 Payments <sup>1</sup>	1949 Payments <sup>1</sup>	1950 Payments <sup>1</sup>

<sup>1</sup> Subject to deduction of statutory subsidies. See Table 29, p. 1005.

The Governments of Ontario and Quebec have not made agreements with the Federal Government. If Agreements had been signed the guaranteed minimum annual payments for these provinces would have been; Ontario, \$67,158,000 and Quebec, \$56,382,000. The payments under the first option for the fiscal years 1948 to 1951 would have been as follows:—Ontario, \$75,212,000, \$79,063,000, \$88,141,000 and \$96,940,000; Quebec, \$64,078,000, \$67,442,000, \$74,986,000 and \$82,347,000. The guaranteed minimum annual payment to Yukon is \$89,365 and the adjusted annual payments were: 1948, \$140,536; 1949, \$156,784; and 1950, \$168,403.

Under an offer ancillary to the Agreements, but which applies to all provinces, whether agreeing or not, the Federal Government will pay to the province one-half of the federal corporation income tax on income of corporations derived from generating and/or distributing to the public, electric energy, gas or steam where this is the main business of the corporation.

### Subsection 8.—National Debt

The gross national debt of Canada on Mar. 31, 1914, was \$544,391,369 as against assets of \$208,394,519, leaving a net debt of \$335,996,850. This was a comparatively small debt; it was incurred almost completely for public works of general utility which, like the intercolonial and transcontinental railways and the canal system, remained assets, though perhaps not realizable assets, of the nation, or was expanded by the subsidizing of enterprises which, like the Canadian Pacific Railway, though not government-owned, assisted greatly in extending the area of settlement as well as the productive and, therefore, the taxable capacity of the country. Broadly speaking, the debt was incurred for productive purposes. Also, it was mainly held outside the country, the principal of the Federal Government funded debt payable at London, England, being \$302,842,485 on Mar. 31, 1914, as against only \$717,453 payable in Canada.

From 1914 to 1920, the gross debt increased by almost \$2,500,000,000 to a total of \$3,042,000,000 due to heavy war and post-war expenditures and, while there was a slight reduction to a low point of \$2,544,586,411 at Mar. 31, 1930, additional expenditures during the depression years resulted in a gross debt of \$3,710,610.593 by Mar. 31, 1939.

From 1939 to 1946 there was an increase of \$15,249,235,590, incurred mainly for war purposes, bringing the total gross debt to \$18,959,846,183 at the end of March, 1946. After deduction of active assets held by the Government, the net debt showed an increase of \$10,268,846,135 during this period, amounting to \$13,421,405,449 at the end of March, 1946. At the end of March, 1950, total gross debt had been reduced to \$16,750,756,246 and net debt to \$11,644,609,199.

The portion of the funded debt payable in foreign currencies decreased steadily and sharply during the war years, as was inevitable under conditions where almost the entire amount of Canada's war financing was carried out through domestic operations. Of the total funded debt and treasury bills outstanding as at Mar. 31, 1950, amounting to \$15,188,138,961, 3.29 p.c. was payable outside Canada: \$61,887,223 payable at London and \$437,800,000 at New York.

### 32.—Summary of the Public Debt of Canada and Interest Payments thereon, Years Ended Mar. 31, 1936-50

NOTE.—Statistics for the years 1867-99 are given at pp. 775-776 of the 1942 Year Book; those for 1900-13, at p. 944 of the 1945 edition; and those for 1914-35 at p. 972 of the 1947 edition.

Year	Gross Debt	Active Assets	Net Debt	Net Debt Per Capital	Increase or Decrease of Net Debt During Year	Interest Paid on Debt	Interest Received from Active Assets	Interest Paid Per Capital
	\$	\$	\$	\$	\$	\$	\$	\$
1936...	3,431,944,027	425,843,510	3,006,100,517	274.53	159,989,559	134,549,169	10,614,125	12.29

1949...	16,950,403,795	5,174,269,643	11,776,134,152	892.06	-595,502,741	465,137,958 <sup>2</sup>	107,888,905 <sup>2</sup>	35.24
1950...	16,750,756,246	5,106,147,047	11,644,609,199	841.07	-131,524,953	439,816,335	91,528,987 <sup>2</sup>	31.77

<sup>1</sup> Based on the official estimates of population given at p. 121.

<sup>2</sup> This amount represents return on investments, which includes interest on investments, profits of Bank of Canada and Central Mortgage Bank and other items.

<sup>3</sup> The apparent increase in interest paid is due to the accrued interest on refundable taxes having been charged in the year of repayment.

**Interest-Bearing Debt.**—The interest-bearing debt of Canada has shown a sharp increase since 1939, amounting to \$16,363,295,686 at Mar. 31, 1949, as compared with \$3,658,414,748 at the same date in 1939. The average rate of interest on this debt continued downward during the war years, reaching the low point of 2.547 p.c. at Mar. 31, 1945. Slight increases in 1946, 1947 and 1948 were recorded, and the rate stood at 2.710 p.c. at Mar. 31, 1948, but decreased slightly to 2.701 at Mar. 31, 1949, and 2.677 at Mar. 31, 1950. This is in contrast with the experience of the First World War, when the average interest rate on the direct debt of the nation rose from 3.368 p.c. at Mar. 31, 1913, to a high point of 5.164 p.c. at Mar. 31, 1922.

During the fiscal year ended Mar. 31, 1939, interest on the public debt absorbed about 26 p.c. of total Government receipts. Interest on the debt in later years has absorbed a smaller portion of revenues, amounting to less than 16 p.c. in the year ended Mar. 31, 1950.

### 33.—Interest-Bearing Debt, Annual Interest Charges thereon and Average Rates of Interest, as at Mar. 31, 1936-50

NOTE.—Statistics for the years 1913-35 are given at p. 977 of the 1947 Year Book.

Year	Bonds, Debentures, and Treasury Bills	Annual Interest Charges on Bonds, Debentures, and Treasury Bills	Average Interest Rate on Bonds, Debentures, and Treasury Bills	Post Office Savings Bank Deposits, Trust and Other Funds	Annual Interest on Savings Bank Deposits and Other Funds	Total Interest-Bearing Debt <sup>1</sup>	Annual Interest Charge	Average Rate of Interest

<sup>1</sup> Includes bonds purchased and held by the Treasury for sinking funds.

<sup>2</sup> Includes refundable portion of income tax and excess profits tax.

**Funded Debt Operations.**—Conversions and other national debt operations carried out between 1914 and 1930 are dealt with at pp. 842-843 of the 1933 Year Book; those between 1931 and 1934 at pp. 905-907 of the 1934-35 Year Book; those of the fiscal years 1935 to 1949 in subsequent editions of the Year Book.

**Treasury Bills.**—Since 1934 a market for short-term treasury bills that has proven highly satisfactory has been built up in Canada. Each issue, with two exceptions (where the bills were sold direct to the Bank of Canada), has been offered for public tender. Lists of treasury bills sold by public tender for the fiscal years ended 1934-46 appear in the respective Year Books beginning with the 1937 edition. Details of the issues in continuation of the list published at p. 778 of the 1942 Year Book may be obtained on request.

### 34.—Unmatured Funded Debt and Treasury Bills as at Mar. 31, 1950, and Annual Interest Thereon

NOTE.—Certain qualifications as to redemption prior to maturity govern most of these issues; they are explained fully in the *Public Accounts*.

Date of Maturity	Description	Rate	Where Payable	Amount of Loan		Annual Interest Charges

**Guaranteed Debt.**—Besides the direct debt of the Federal Government, already dealt with, there are large indirect obligations arising mainly out of the guarantee of securities, by the Federal Government, of the railway lines that now form the Canadian National Railways, and the subsequent extensions thereof. Together with these are other small indirect obligations, originating in the Government's guarantees of the bonds of the Canadian National Steamship services and of the bonds of the Harbour Commissions issued in the main for harbour improvements. Since 1932, guarantees of certain bank loans have been made under the various Relief Acts. With the commencement of business of the Bank of Canada on Mar. 11, 1935, the guarantee [authorized by Sect. 27 (6) of the Bank of Canada Act] of

the deposit required to be maintained in the Bank of Canada by every chartered bank came into force. This guarantee must be implemented "in the event of the property and assets of the Bank being insufficient to pay its liabilities, and if the Bank suspends payment of any of its liabilities".

For full details of other guarantees also outstanding at Mar. 31, 1950, see Schedule "V" to the *Public Accounts* for 1950.

### 36.—Guaranteed Debt of the Federal Government (Amounts Held by the Public), as at Mar. 31, 1936-50

NOTE.—Figures for the years 1914-23 are given at p. 837 of the 1943-44 Year Book; those for the years 1924-35 at p. 978 of the 1947 Year Book.

<sup>1</sup> The main item in this category is the guarantee of bank advances to the Canadian Wheat Board; does not include indeterminate amounts and amounts not yet determined.

## Section 3.—Provincial Public Finance\*

Revenues and expenditures presented in this Section do not agree with those shown in Tables 1 and 3 of this Chapter because of differences in the methods used to compute 'net' figures.

Commencing with 1946 the statistics appearing in this Section have been prepared on a basis not strictly comparable with those given for previous years. Certain of the former major classifications have been eliminated or redistributed; in the case of tables dealing with debt the totals are comparable with previous years but the classification has been revised.

In order to prepare comparable statistics it is essential that data be presented, to the greatest possible extent, in terms of uniform categories. In many instances, activities relating to a specific function are excluded by some Provincial Governments from their ordinary account whereas similar activities are included by other provinces. The special or administrative funds of this nature so excluded are therefore added to provincial ordinary account to arrive at 'general' revenues and expenditures. For this reason it is obvious that total revenues and expenditures presented herein will differ considerably from those shown in provincial public accounts.

\* Revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics. Years referred to throughout this Section are fiscal years ended nearest Dec. 31 of year stated.

Fiscal periods dealt with are as nearly coincident as is possible in view of the variations in provincial fiscal year-ends. For example, figures shown for 1947 are for the following fiscal year-ends: Nova Scotia, Nov. 30, 1947; New Brunswick, Oct. 31, 1947; and all other provinces, Mar. 31, 1948.

### Subsection 1.—Revenues and Expenditures of Provincial Governments

Tables 37, 38 and 39 present a general summary of provincial government finance by combining ordinary and capital account revenues and expenditures on a net basis. These tables provide a more valid comparison than those based on ordinary account alone because they eliminate incomparabilities that arise through variations between provinces and between years in the types of expenditure made from capital account. In Table 37, 'Net General Revenues and Net Combined General and Capital Expenditures', subject to changes in procedure which follow, has the same meaning as the heading which appeared over this table in the 1948-49 Year Book. 'Net General Revenues' is arrived at by deducting from 'Gross General Revenues' shown in Table 40: (a) all institutional revenues; (b) interest, premium, discount and exchange; and (c) grants-in-aid and shared-cost contributions received from other governments. While the surplus position is the same in both the gross and net presentation, the former tends to emphasize the gross administrative burden of services and the latter shows the net cost of those services. When calculating 'Net Combined General and Capital Expenditures', amounts similar to the deductions from revenue described above are deducted from the pertinent function of expenditure, and all capital revenues are offset against gross capital expenditures. It follows that, at the net stage, only general revenue as shown in Tables 37 and 38 remains.

Sinking-fund earnings are not included in revenues. In 1947, by provinces, they were: Prince Edward Island, \$57,000; Nova Scotia, \$543,000; New Brunswick, \$598,000; Quebec, \$2,003,000; Ontario, \$2,000; Manitoba, \$571,000; Saskatchewan, \$1,067,000; and British Columbia, \$698,000. Previous to 1946 amounts similar to those shown in Tables 38 and 39 as 'Non-Revenue and Surplus Receipts' and 'Non-Expense and Surplus Payments' amounting to \$3,075,000 and \$1,619,000 were excluded. Revenue previously described as 'Public Domain' is nearly all included under 'Privileges, Licences and Permits—Natural Resources'; the remainder now appears under 'Sales and Services'. Likewise, 'Liquor Control' revenues are now shown under five different headings: 'Taxes—Alcoholic Beverages', 'Privileges, Licences and Permits—Liquor Control and Regulation', 'Fines and Penalties', 'Contributions from Government Enterprises—Profits (Liquor)' and 'Other Revenue'; the latter category includes confiscations under liquor control. The distribution of moneys received from the Federal Government as between taxation agreements and subsidies is also worthy of emphasis.

The expenditures classification is also changed considerably. 'Legislation' is now a sub-caption under 'General Government'; 'Highways, Bridges and Ferries' is now under 'Transportation and Communications'; and 'Public Welfare' is now referred to as 'Health and Social Welfare' with a more detailed analysis than heretofore. Some expenditures previously included under 'Education' are now shown under 'Recreational and Cultural Activities'. 'Public Domain' becomes 'Natural Resources and Primary Industries' with a comprehensive analysis which includes 'Agriculture' (previously a main heading). Whereas in past years, expenditures on debt retirement were excluded, they are included in these tables for the years 1946 and 1947.

<sup>1</sup> Includes non-revenue and surplus receipts excluded from preceding years. <sup>2</sup> Excludes debt retirement which is included in 1946 and 1947 figures. <sup>3</sup> Includes non-revenue and surplus payments excluded from preceding years. <sup>4</sup> Fifteen months due to change in fiscal year. <sup>5</sup> Eleven months due to change in fiscal year.

## Subsection 2.—Debt of Provincial Governments

The average coupon rate of gross bonded debt of Provincial Governments decreased each year from 4.12 p.c. in 1942 to 3.61 p.c. in 1948. During these years also, the proportion payable in Canada only increased steadily, while that payable at New York showed a marked decline. Prince Edward Island had the lowest average coupon rate in 1948.

<sup>1</sup> Details of direct and indirect debt for 1948 completed since this table went to press, are available at p. 10 of "Financial Statistics of Provincial Governments, 1948" published by the Dominion Bureau of Statistics.

## Section 4.—Municipal Finance\*

### Subsection 1.—Municipal Assessed Valuations

The revenue resources of municipalities are limited generally to direct taxation, based on assessed valuations of real and other types of property. In the Provinces of Prince Edward Island, Nova Scotia, New Brunswick, Manitoba and Alberta municipalities assess and tax personal property. In Alberta municipal districts the valuations of personal property assessed have risen sharply with the growth of the oil industry. In Manitoba the personal property tax is used generally by all classes of municipalities except cities. Aside from property, the most important type of valuation for taxation purposes is business assessment, although not all provinces assess for business purposes separately and distinctly from real property valuations. A variation of methods, schedules and rates exists not only between provinces but also between municipalities within the same province. Some municipalities use the rental basis, others the value of floor space occupied and still others the capital value of the premises occupied. Three of the provinces have other miscellaneous types of assessment, the general nature of which will be noted from the footnotes to Table 44. Income assessment, which formerly was employed in Nova Scotia and New Brunswick was done away with in 1943 as a result of the operation of the Dominion-Provincial Tax Agreements.

It should be noted that the figures in Table 44 are not entirely comparable, on an interprovincial basis, from the standpoint of relative values of properties taxable for municipal purposes. Each province operates under its own assessment laws, which are not all similar, either in application or in effect. For instance, in British Columbia cities and municipal districts improvements cannot be taxed on a value in excess of 75 p.c. of taxable values or in most of the villages in excess of 50 p.c. of taxable values; the values actually taxed in 1948 ranged from nil to 75 p.c. In the majority of cases, improvements were assessed for tax purposes at 50 p.c. of taxable values, but for all municipalities the total improvements actually taxed represented approximately 48 p.c. of total taxable values. It should also be noted that Table 45 does not include assessed valuations in Improvement Districts for either Saskatchewan or Alberta. In Saskatchewan these amounted to \$27,327,995, \$26,874,190, \$26,892,080 and \$28,777,035 and in Alberta to \$63,171,742, \$62,753,779, \$68,645,962 and \$65,713,818 in 1945, 1946, 1947 and 1948, respectively. In addition there are other intra-provincial inconsistencies between municipalities which, in turn, further affect interprovincial comparisons. These may be said to be due to the lack of integrated municipal assessment systems and uniform standards for establishing values on a province-wide basis, under the direction and control of a central authority. Some provinces, however, have made considerable progress along these lines in recent years.

\* Revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

<sup>1</sup> Includes the following: N.S.—Household Tax; Sask.—Special Franchise; Alta.—Franchise and Other Special.

<sup>2</sup> Includes estimated values for some municipalities, also total exemptions incomplete.

<sup>3</sup> Includes some other types of valuations not specified.

<sup>4</sup> Includes temporary exemptions, \$43,932,563

<sup>5</sup> Cities only.

<sup>6</sup> Includes \$201,269,083 (1945), \$223,651,933 (1946), \$247,390,470 (1947) and \$278,368,097 (1948), valuation of improvements, the total value of which was \$433,581,311 (1945), \$468,844,049 (1946), \$511,289,782 (1947) and \$574,582,394 (1948) and the maximum value at which they could be taxed was \$271,071,473 (1945), \$292,353,568 (1946), \$379,965,133 (1947), and \$430,936,795 (1948).

<sup>7</sup> Consists of \$182,248,385 (1945), \$188,328,203 (1946), \$190,427,963 (1947), and \$199,388,993 (1948), valuation of exempted properties, and \$232,312,228 (1945), \$245,192,116 (1946), \$263,899,312 (1947), and \$296,214,297 (1948), exemptions of taxable improvements as referred to in footnote 6.

While complete figures for tax-exempt properties are not available for each province, it will be noted from the information given that these have assumed relatively high proportions. Most provinces have shown consistent increases in taxable assessed valuations which may be attributed largely to the stimulus to business and industry in general, arising from the War and the buoyancy of the economy in succeeding years.

### Subsection 2.—Municipal Taxation

Table 45 shows, by provinces, the taxes levied by municipalities in 1945, 1946, 1947 and 1948, and the total taxes outstanding at the end of those years. While these figures are as nearly comparable as may be obtained from existing published reports, they nevertheless reflect some inconsistencies due particularly to interprovincial variations in the division of responsibility for tax administration between municipalities and school authorities. In some instances school taxes are not included in the municipal levies. In Prince Edward Island, two only of the eight incorporated municipalities have their own individual school districts and levy and collect the school taxes. In Quebec, while school taxes, with few exceptions, are levied and collected by the school corporations which function independently of municipal authorities, they are, nevertheless, included in this tabulation for purposes of greater interprovincial comparability. It will, therefore, be apparent from the foregoing that the figures in Table 45, except in the case of Quebec, represent only the amount of tax levies, collections and arrears of the municipalities, and include school taxes only to the extent that such are also levied and collected by the municipalities for and on behalf of local school authorities. Taxes for schools outside incorporated municipal organizations are not included.

#### 45.—Municipal Taxation, by Provinces, 1945-48

NOTE.—See text above for limitations on comparability of statistics in this table.

<sup>1</sup> Includes estimates in some instances as actual figures are not available.<sup>2</sup> Excludes \$1,363,007 in 1945, \$1,366,821 in each year for 1946 and 1947 and \$2,051,422 in 1948 compensation through Provincial Government for loss of income tax (see p. 1020).<sup>3</sup> Includes certain provincial and other special taxes (see text following this table), but excludes taxes in Improvement Districts.

Because of these inconsistencies and the fact also that there are considerable differences in the division of responsibility for services between the Provincial Governments and their respective municipalities, extreme caution should be exercised in using the figures in Table 45 as a basis for interprovincial comparisons of the relative burden of municipal taxation. Also, in Saskatchewan and Alberta, municipalities are required to levy certain taxes for and on behalf of the Provincial Government and for other special purposes for which there is no comparable situation in other provinces. The amounts of such taxes included in the municipal levies in these two provinces, are as follows:—

Item	1945	1946	1947	1948
	\$	\$	\$	\$
<b>Saskatchewan—</b>				
Public revenue taxes (provincial).....	1,621,273	1,661,667	1,636,076 <sup>†</sup>	1,662,404
Telephone and hail taxes.....	2,366,483	2,106,250	2,293,634	2,067,203
<b>Totals, Saskatchewan.....</b>	<b>3,987,756</b>	<b>3,767,917</b>	<b>3,929,710<sup>†</sup></b>	<b>3,729,607</b>
<b>Alberta—</b>				
Social services, educational and wild lands taxes (provincial).....	1,033,456	1,009,951	9,965 <sup>1,†</sup>	11,864 <sup>1</sup>

<sup>1</sup> Excludes social services taxes.

There has been only a slow steady rise in the trend of municipal tax levies in Canada in the years 1944-48. While most provinces show increases, this does not necessarily mean an increased burden on the individual taxpayer in all instances, but is more the result, in part at least, of the increases reflected in assessed valuations. In Nova Scotia and New Brunswick the increases are, to a considerable extent, due to the establishment of larger school units so that certain municipalities are now levying taxes formerly levied by rural school boards. Tax collections continued high in relation to total levies; this, in recent years, has resulted in substantial reductions in the amount of unpaid taxes outstanding although these are still relatively high in most provinces. The situation for different classes of municipalities varies considerably. Reference has been made heretofore to the Improvement Districts in Saskatchewan and Alberta which, although not incorporated municipalities, are nevertheless maintained by the Provincial Governments more or less as self-sustaining areas on the same basis. Taxation figures for these Districts are excluded from Table 45 but by reason of the special significance attached to them in relation to municipal organization in these provinces, and the fact that they may become incorporated, or part of existing municipalities at some future date, the corresponding information with regard to them is shown in Table 46.

46.—Taxation in Improvement Districts of Saskatchewan and Alberta, 1945-48

<sup>1</sup> Includes public revenue (provincial) taxes amounting to \$54,459 in 1945, \$53,558 in 1946, \$53,619 in 1947 and \$56,636 in 1948.

### Subsection 3.—Municipal Debt

The rapid growth experienced by municipalities in Canada coupled with increased demands and responsibilities for improvements, schools, utilities, and other services or facilities has resulted in the incurring of a heavy burden of debt. Debenture borrowings increased rapidly in the period 1900-12 and again during the 1920's and early 1930's. From 1933 to 1946, however, the trend was downward. In 1947 and 1948 the total of municipal debenture debt showed a considerable increase, Saskatchewan only showing a decline each year, and that at a retarded rate.

Several important factors have contributed to this decline in municipal indebtedness, not the least important of which has been the measure of control exercised by Provincial Governments over capital expenditures involving the incurring of debt. In addition, there was a more or less orderly retrenchment during the depression years following periods of what proved to be unwarranted expansion which, along with widespread demands to ease the tax burden on real property, resulted in the severe curtailment of capital undertakings and works requiring debenture financing. A further significant factor in this regard is that the greater part of the municipal long-term debt is represented by serial or instalment-type debentures, which require yearly repayments of principal. While the benefits of debt reduction are of course manifold, certain expenditures have been sorely needed in many communities for the rehabilitation of existing assets and for new works and improvements necessitated by normal expansion and development. These were sacrificed in the 1930's mainly in the interests of the taxpayers. After the outbreak of war in 1939, the policy of deferment was continued, or even extended, to free the financial market to the needs of the Federal Government in meeting its war financing requirements. Municipalities having been denied, either voluntarily or otherwise, improvement programs for so long, have in recent years been getting these under way. This becomes apparent in the increased amounts of debenture debt for some provinces in 1947 and 1948. Indications are that the increase will continue in 1949 and 1950. Table 47 shows figures of municipal indebtedness for 1948 and includes temporary loans and other liabilities in addition to debenture debt.

#### 47.—Debt of Municipal and School Corporations for their Fiscal Years Ended in 1948

<sup>1</sup> Includes \$11,504,459 capital liabilities (building loans and debentures) for Roman Catholic separate schools and \$694,368 for public schools in unorganized areas.

<sup>2</sup> Excludes liabilities of schools and other local boards and commissions but includes in lieu thereof amounts due by municipal revenue fund accounts to such schools and other local authorities (information required to make the necessary eliminations on this account not available from published reports (see footnote 1).

<sup>3</sup> Excludes rural schools.

<sup>4</sup> Includes \$1,547,086 treasury bills.

<sup>5</sup> Includes \$1,383,945 tax prepayment deposits for Vancouver.

Available information indicates that the direct and indirect debt of municipalities continued during 1945 the decline which had been evident since 1940. Table 41 at p. 1006 of the 1948-49 edition of the Year Book gives figures for the years 1943, 1944 and 1945. As the statistics are not yet available for Quebec for 1946, 1947 or 1948, it is not possible to appraise the trend in those years for Canada as a whole. Retirement of direct debenture debt accounted for the major portion of the decrease during this period, although increases have been recorded for 1947 and 1948 in some provinces. The decreases in debenture debt are due to the factors mentioned on p. 1025, while improved tax collections have made it possible for municipalities to avoid heavy temporary borrowings and reduce other current liabilities. It is pointed out however that debenture debt figures are intended to represent only principal unmatured. In general, principal past due, whether in default or unpaid because of non-presentation, has been included with accounts payable and other liabilities. The more significant items available are given in Table 48.

In this Chapter are assembled the statistics regarding financial institutions and transactions, other than those pertaining to insurance: the latter are dealt with separately in Chapter XXVI.

## PART I.—CURRENCY AND BANKING

### Section 1.—Historical Sketch

At pp. 900-905, inclusive, of the 1938 Year Book there appears a historical sketch of currency and banking in Canada, tracing certain features of the central banking system that finally led up to the establishment of the Bank of Canada. In chronological order these were:—

(1) *Central Note Issue*, permanently established with the issue of Dominion notes under legislation of 1868.

(2) *The Canadian Bankers' Association*, established in 1900 and designed to effect greater co-operation among the banks in the issue of notes, in credit control and in various aspects of bank activities.

(3) *The Central Gold Reserves*, established by the Bank Act of 1913.

(4) *Rediscount Facilities*, although originated as a war measure by the Finance Act of 1914, were made a permanent feature of the system by the Finance Act of 1923, which empowered the Minister of Finance to issue Dominion notes to the banks on the deposit by them of approved securities. This legislation provided the banks with a means of increasing their legal tender cash reserves at will.

## Section 2.—The Bank of Canada

### Subsection 1.—The Bank of Canada Act and Its Amendments

The Bank of Canada was incorporated in 1934 and commenced operations on Mar. 11, 1935. An account of the capital structure of the Bank and its transition from a privately owned institution to a wholly government-owned one is given at p. 800 of the 1941 Year Book.

The Bank is authorized to pay cumulative dividends of  $4\frac{1}{2}$  p.c. per annum from its profits after making such provision as the Board thinks proper for bad and doubtful debts, depreciation in assets, pension funds, and all such matters as are properly provided for by banks. The remainder of the profits will be paid into the Consolidated Revenue Fund of Canada and to the Rest Fund of the Bank in specified proportions until the Rest Fund is equal to the paid-up capital, when all the remaining profits will be paid into the Consolidated Revenue Fund.

The Bank may buy and sell securities of the Government of Canada and Provincial Governments without restriction if of a maturity not exceeding two years, and in limited amounts if of longer maturity; short-term securities of the Government of Canada and Provincial Governments may be rediscounted. It may also buy and sell short-term securities of Commonwealth countries, the United States or France without restriction if maturing within six months, and such securities having a maturity exceeding six months in limited amounts. The Bank may buy and sell certain classes of commercial paper of limited currency and, if endorsed by a chartered bank, may rediscount such commercial paper. Advances for six-month periods may be made to chartered banks, Quebec Savings Banks, the Government of Canada or any Provincial Government against certain classes of collateral, and advances of specified duration may be made to the Government of Canada or any Provincial Government in amounts not exceeding a fixed proportion of such Government's revenue. The Bank may accept from the Government of Canada or Provincial Governments, or from any chartered bank or any bank incorporated under the Quebec Savings Banks' Act, deposits that do not bear interest. The Bank may buy and sell gold, silver, nickel and bronze coin, and gold and silver bullion, and may deal in foreign exchange.

The provisions regarding the note issue of the Bank of Canada are dealt with at p. 1033.

The Bank of Canada Act (24-25 Geo. V, c. 43 and amendments) provides that the Bank shall maintain a reserve of gold equal to not less than 25 p.c. of its total note and deposit liabilities in Canada. Under the terms of the Exchange Fund Order, 1940, authorizing the transfer of the Bank's gold holdings to the Foreign Exchange Control Board, the minimum gold reserve requirement has been temporarily suspended; this suspension was continued under the Foreign Exchange Control Act, 1946. The reserve, in addition to gold, may include silver bullion; balances in pounds sterling in the Bank of England, in United States dollars in the Federal Reserve Bank of New York, and in gold currencies in central banks in gold-standard countries or in the Bank for International Settlements; treasury bills of the United Kingdom or the United States of America having a maturity not exceeding three months; and bills of exchange having a maturity not exceeding 90 days, payable at London or New York, or in a gold-standard country, less any liabilities of the Bank payable in the currency of the United Kingdom, the United States of

America or a gold-standard country. In accordance with the terms of the Foreign Exchange Acquisition Order, 1940, the Bank of Canada sold foreign exchange with a Canadian dollar value of \$27,734,444 to the Foreign Exchange Control Board.

The chartered banks are required to maintain a reserve of not less than 5 p.c. of their deposit liabilities, payable in Canadian dollars, in the form of deposits with, and notes of, the Bank of Canada.

The Bank acts as the fiscal agent of Canada without charge and may, by agreement, act as banker or fiscal agent of any province. The Bank does not accept deposits from individuals and does not compete with the chartered banks in commercial banking fields.

The head office of the Bank is at Ottawa, and it has an agency in each province, namely, at St. John's, Charlottetown, Halifax, Saint John, Montreal, Toronto, Winnipeg, Regina, Calgary and Vancouver.

The Governor of the Bank is its chief executive officer and Chairman of the Board of Directors; he is assisted by a Deputy Governor and an Assistant Deputy Governor. The first appointments were made by the Government. Subsequent appointments are to be made by the Board of Directors subject to the approval of the Governor in Council.

At the first meeting of the shareholders on Jan. 23, 1935, seven directors were elected with terms as follows: one director, until the third annual general meeting (1938); two, until the fourth (1939); two, until the fifth (1940); and two, until the sixth annual general meeting (1941). Former directors continued in office when the Government took over the management of the Bank but directors are now appointed by the Minister of Finance with the approval of the Governor in Council for terms of three years. In 1949 there were twelve directors. In the transaction of the business of the Bank, each director has one vote.

There is also an Executive Committee of the Board of Directors consisting of the Governor, Deputy Governor and one member of the Board, which must meet once a week. This Committee has the same powers as the Board but every decision is submitted to the Board of Directors at its next meeting. The Board must meet at least four times a year. The Deputy Minister of Finance is an *ex officio* member of the Board of Directors and of the Executive Committee, but is without vote.

The Governor alone, or in his absence the Deputy Governor, has the power to veto any action or decision of the Board of Directors or the Executive Committee, subject to confirmation or disallowance by the Governor in Council.

### **Subsection 2.—The Bank of Canada and Its Relationship to the Canadian Financial System**

An article under this title is given at pp. 881-885 of the 1937 edition of the Year Book. It deals with such subjects as the functions of the Bank, its control and regulation of credit and currency, the mechanism by which such control is exercised, the expansion and contraction of credit, the mitigation of general economic fluctuations, the control of exchange operations, the advisory function of the Bank, and its duties as the Government's banker. An article on the wartime functions of a central bank appears at pp. 803-806 of the 1942 Year Book.

### **Subsection 3.—Bank of Canada Operations**

The expansion of Bank of Canada liabilities and assets has provided for increased Bank of Canada notes in active circulation (the chartered-bank note issue has been gradually retired) and has enlarged the cash reserves of the chartered

banks. The principal changes in Bank of Canada assets since April, 1938, have been (a) the rise in investments, partly to replace the gold and foreign-exchange holdings transferred to the Foreign Exchange Control Board under the terms of the Exchange Fund Order and Foreign Exchange Acquisition Order, dated Apr. 30, 1940, and (b) the fluctuations in holdings of sterling exchange through which the Bank has temporarily financed Canadian dollar requirements of the Foreign Exchange Control Board.

<sup>1</sup> The Exchange Fund Order, 1940, authorized the transfer of the Bank's gold holdings to the Foreign Exchange Control Board and temporarily suspended the requirement for a minimum gold reserve.

### Subsection 4.—The Industrial Development Bank

The Industrial Development Bank, a subsidiary of the Bank of Canada, was incorporated by Act of Parliament during 1944, commencing its banking operations on Nov. 1, 1944. Its functions are described in the preamble to the Act as follows:—

“To promote the economic welfare of Canada by increasing the effectiveness of monetary action through ensuring the availability of credit to industrial enterprises which may reasonably be expected to prove successful if a high level of national income and employment is maintained, by supplementing the activities of other lenders and by providing capital assistance to industry with particular consideration to the financing problems of small enterprises.”

The President of the Industrial Development Bank is the Governor of the Bank of Canada and the Directors are the Directors and Assistant Deputy Governor of the Bank of Canada. The \$25,000,000 capital stock of the Bank (completely paid up) was subscribed by the Bank of Canada. The Industrial Development Bank may also raise funds by the issue of bonds and debentures provided that its total direct liabilities and contingent liabilities in the form of guarantees and underwriting agreements do not exceed three times the aggregate of the Bank's paid-up capital and Reserve Fund.

The lending powers of the Bank may be extended only to industrial enterprises in Canada with respect to which it is empowered to:—

- (1) lend money or guarantee loans;
- (2) enter into underwriting agreements with regard to any issue of stock, bonds or debentures;
- (3) acquire stock, bonds or debentures from the issuing corporation or any person with whom the Bank has entered into an underwriting agreement.

The Bank may accept any form of collateral security against its advances, including real property.

The Industrial Development Bank is intended to supplement the activities of other lending agencies rather than to compete with them and the Act of incorporation requires that it should extend credit only when the Board of Directors is of the opinion that similar credit would not be available elsewhere on reasonable terms and conditions. The Bank is specifically prohibited from engaging in the business of deposit banking.

Authorized and outstanding loans of the Industrial Development Bank as at Mar. 31, 1950, are classified by provinces, size of loans and industries in Table 2. Outstanding loans and investments at Dec. 31, 1950, amounted to \$25,296,983.

### Section 3.—Currency

#### Subsection 1.—Notes and Coinage

**Note Circulation.**—The development by which bank notes became the chief circulating medium in Canada prior to 1935 is described at pp. 900-905 of the 1938 Year Book. The main steps of this development that remained as permanent features of the system are outlined at pp. 809-810 of the 1941 Year Book.

When the Bank of Canada commenced operations in 1935 it assumed liability for Dominion notes outstanding. These were replaced in public circulation and partly replaced in cash reserves by the Bank's legal tender notes in denominations of \$1, \$2, \$5, \$10, \$20, \$50 and \$100. Deposits of chartered banks at the Bank of Canada completed the replacement of the old Dominion notes of \$1,000 to \$50,000 denomination that had previously been used as cash reserves.

The chartered banks were required under the Bank Act of 1934 to reduce the issue of their own bank notes gradually during the years 1935-45 to an amount not in excess of 25 p.c. of their paid-up capital on Mar. 11, 1935. Bank of Canada notes thus replaced chartered bank notes as the issue of the latter was reduced. Further restrictions introduced by the 1944 revision of the Bank Act cancelled the right of chartered banks to issue or reissue any notes after Jan. 1, 1945, and after January, 1950, the chartered banks' liability for such of their notes as then remained outstanding was transferred to the Bank of Canada in return for payment of a like sum to the Bank of Canada.

As a result of the changes indicated above, data since 1935 on bank-note circulation are not comparable with those of earlier years though statistics of total notes in the hands of the general public are comparable. This public circulation includes chartered bank notes together with Dominion or Bank of Canada notes, exclusive of those held by the banks as reserves.

Since 1935 there has been little change in the circulation of denominations under \$5. In most of the denominations from \$5 to \$100, where Bank of Canada notes have largely replaced chartered bank notes or Dominion notes, there has been a decided increase.

#### 3.—Denominations of Bank of Canada, Dominion and Other Notes in Circulation for certain years, 1926-49

**NOTE.**—Annual averages of month-end figures. The totals outstanding are not always multiples of the denominations of notes because of adjustments made according to scale when parts of mutilated notes are turned in for cancellation.

<sup>1</sup> Gross note circulation of chartered banks less notes held by other chartered banks.

<sup>2</sup> Total

issue less notes held by chartered banks and notes deposited in the Central Gold Reserves up to March, 1935.

<sup>3</sup> Figures, to nearest million, supplied by the Bank of Canada.

<sup>4</sup> Figures based on

estimates of population as given at p. 121.

<sup>5</sup> Gross note circulation only; notes held by other chartered banks cannot be subtracted since they are not available.

**Coinage.\***—The present monetary standard of Canada is gold of 900 millesimal fineness (23.22 grains of pure gold equal to one gold dollar). Under the Uniform Currency Act of 1871, gold coin has been authorized but only very limited issues were ever made. Gold coins have not been struck since 1919. The British sovereign and half-sovereign, and United States eagle, half-eagle and double eagle are legal tender. Subsidiary coin consists of \$1, and 50-, 25- and 10-cent silver pieces,† 5-cent nickel and 1-cent bronze pieces. Subsidiary silver coin is legal tender to the amount of ten dollars. The 5-cent piece is legal tender up to five dollars and the 1-cent bronze coin up to 25 cents. There is no provision for the redemption of subsidiary coin. A table at p. 807 of the 1941 Year Book gives particulars of weight, fineness, etc., of current coins.

\* Revised by the Royal Canadian Mint, Ottawa.

† The Currency Act of 1910 made provision for a silver dollar and a 5-cent silver coin. The 5-cent silver coin was coined freely until 1921. It still has limited legal tender but has been replaced in the coinage by the nickel 5-cent piece. In 1942 a 5-cent piece was coined from 'tombac', a copper-zinc alloy, in order to conserve nickel for war purposes, and this coin was replaced in 1944 by a 5-cent coin composed of mild steel with a chromium finish. The current coin is pure nickel.

**5.—Circulation of Canadian Coin as at Dec. 31, 1940-49**

NOTE.—The figures are of net issues of coin. Figures for the years 1901-25 are given at p. 855 of the 1927-28 Year Book and for 1926-39 at p. 956 of the 1946 edition.

<sup>1</sup> Per capita figures are based on estimates of population as given at p. 121.

**The Royal Canadian Mint.**—The Ottawa Mint was established as a branch of the Royal Mint under the (Imperial) Coinage Act, 1870, and opened on Jan. 2, 1908. By 21-22 Geo. V, c. 48, it was constituted a branch of the Department of Finance, and by the Proclamation of Nov. 14, 1931, issued under Sect. 3 of that Act, it has, since Dec. 1, 1931, operated as the Royal Canadian Mint. At first the British North American provinces, and later the Dominion of Canada, obtained their coins from the Royal Mint at London or from The Mint, Birmingham, Limited, England. In its earlier years the operations of the Mint in Canada were confined to the production of gold, silver and bronze coins for domestic circulation, of British sovereigns and of small coins struck under contract for Newfoundland and Jamaica. Before 1914, small quantities of gold bullion were refined, but during the First World War the Mint came to the assistance of the British Government by establishing a refinery in which nearly 20,000,000 fine oz. of South African gold were treated on account of the Bank of England. The subsequent development of the gold-mining industry in Canada has resulted in gold-refining becoming one of the principal activities of the Mint. Most of the fine gold produced from the rough shipments from the mines is delivered to the Department of Finance (since Mar. 11, 1935, the Bank of Canada has acted as agent for the Government) in the form of bars of approximately 400 fine oz. each, the rest being sold in convenient form to manufacturers. The fine silver extracted from the rough gold, when not required for coinage, is sold at New York or disposed of to local manufacturing firms.

An account of the organization and operational methods of the Royal Canadian Mint is given at pp. 888-892 of the 1940 Year Book.

**6.—Annual Receipts of Gold Bullion at the Royal Canadian Mint, and Bullion and Coinage Issued, 1940-49**

### Subsection 2.—Money Supply

During 1947 the Bank of Canada developed a presentation of statistics concerning money supply and related bank assets which differs in several important respects from the table presented in previous issues of the Year Book. It is believed that the new series provides a better approach to the problem of measuring changes in the volume of money under present-day conditions though, unfortunately, the Bank of Canada series has been carried back to 1938 only, whereas the former Dominion Bureau of Statistics series was available from 1919 (see pp. 1022-1023 of the 1947 Year Book).

In measuring the volume of money it is necessary to decide which categories of bank deposits should be classed as 'money' and which, by their nature, should be regarded more appropriately as part of the public's other liquid asset holdings such as Government bonds. Generally, it has been satisfactory to classify bank deposits as money if cheques may be drawn against them. In other countries this criterion has seemed to work fairly well because cheques may not be drawn against savings deposits. In Canada, however, cheques are, in practice, drawn freely against savings deposits and this has always posed an awkward problem when trying to assemble volume of money statistics. To omit all savings deposits of chartered banks would ignore the obvious fact that for many people a savings account is an active chequing account which is very similar to a current deposit. On the other hand it is known from available information that, of the total amount on deposit in savings accounts in Canada, much the larger part is, in practice, inactive. Chartered banks pay interest on the minimum quarterly balances in personal savings accounts, i.e., on the sum that has been left undisturbed for the quarterly period; from the amount of interest that is actually paid on this basis as compared with the nominal rate of interest, it is apparent that the aggregate minimum quarterly balances in personal savings accounts are about five-sixths of the total of such deposits at the present time.

It is felt, therefore, that a more realistic picture of monetary developments in Canada—and one more comparable with the usual presentation of similar statistics in other countries—is obtained by omitting the minimum quarterly balances in personal savings deposits and non-personal notice deposits from volume-of-money statistics. It has seemed preferable to exclude these deposits from the volume of money on the basis that they are inactive in practice rather than to include them on the grounds that they are potentially active because cheques may be issued against them.

The published returns of Canadian chartered banks include among assets "Cheques on Other Banks" which represents the amount of cheques that have been credited to the deposit account of the payee but not yet cleared against the deposit account of the drawer. To the extent of such items in 'float' there is, therefore, duplication in the figures of bank deposits. In Table 7 "Cheques on Other Banks" has been deducted from the figure of chartered bank deposits in order to eliminate this duplication.

Government deposits are given different treatment in different countries as far as volume-of-money statistics are concerned. In most cases the commonly used figure of bank deposits excludes Government deposits and, on the whole, it appears preferable to exclude Government of Canada deposits from the Canadian money-supply figures.

**7.—Summary Statistics of Currency and Active Bank Deposits, 1940-49**

(Millions of dollars)

<sup>1</sup> Note circulation excluding notes held by chartered banks together with total coin issued by the Mint, less coin held by the banks.

<sup>2</sup> Demand and notice deposits, deposits of Provincial Governments, United Kingdom and foreign banks; less 'float' deposits, that is, cheques on banks as shown in month-end returns.

<sup>3</sup> Excludes Government of Canada, chartered bank and foreign deposits.

**Section 4.—Monetary Reserves****Subsection 1.—Bank of Canada Reserves**

The composition of Canadian gold reserves held by the Government is presented in the 1936 edition of the Year Book, at p. 895, for the years 1905 to 1934. Since March, 1935, the gold reserves have been held by the Bank of Canada. By authority of the Exchange Fund Act (c. 60, 1935), effective in July, 1935, they are valued at the current market price of gold. The new data are to be found under the item "Reserves" in the "Assets" section of Table 1, p. 1031. As explained in the footnote to that table, under the Exchange Fund Order of Apr. 30, 1940, the gold reserves of the Bank of Canada were transferred to the Foreign Exchange Control Board and the requirement that the Bank should maintain a reserve of gold equal to not less than 25 p.c. of its total note and deposit liabilities in Canada was temporarily suspended.

**Subsection 2.—Chartered Bank Canadian Cash Reserves**

**Before the Establishment of the Bank of Canada.**—Up to March, 1935, legal tender cash reserves in Canada were made up partly of Dominion notes, partly of gold coin and bullion, and subsidiary coin, including these forms of cash held by the banks themselves, and as deposits in the Central Gold Reserves. In so far as these reserves were in actual gold or were in Dominion notes backed by gold, they were subject to the expanding or contracting influences of monetary gold imports or exports arising from Canada's balance of international payments, so long as Canada was on the gold standard.

**Since the Establishment of the Bank of Canada.**—When the Bank of Canada was established, the chartered banks turned over their reserves of gold in Canada and Dominion notes to the new bank in exchange for deposits with, and notes of, the Bank of Canada. It was provided that, henceforth, the chartered

banks were to carry reserves in these forms amounting to at least 5 p.c. of their deposit liabilities in Canada. Since that time, therefore, the gold reserves against currency and bank credit have been in the custody of the central bank, except as affected by the Exchange Fund Order, 1940, as explained under Bank of Canada reserves in Subsection 1, p. 1029.

#### 8.—Annual Averages of Cash Reserves of the Chartered Banks, 1940-49

NOTE.—Figures, to nearest million, supplied by the Bank of Canada. Cash reserves include notes and deposits with the Bank of Canada. Figures for the years 1926-39 are given at p. 960 of the 1946 Year Book.

## Section 5.—Commercial Banking

### Subsection 1.—Historical

Since one of the chief functions of the early banks in Canada was to issue notes to provide a convenient currency or circulating medium, it has been expedient to cover both currency and banking in the one historical sketch, which is given at pp. 901-905 of the 1938 Year Book. A list of the banks at Confederation appears at p. 897 of the 1940 Year Book and bank absorptions since 1867 are given at pp. 812-813 of the 1941 edition. A table at pp. 894-895 of the 1937 Year Book shows the insolvencies from Confederation; the last insolvency occurred in 1923.

A summary of the more important changes resulting from the revision of the Bank Act in 1944 is given at pp. 961-962 of the 1946 Year Book.

### Subsection 2.—Combined Statistics of Chartered Banks

In order to afford a clear view of the nature of banking transactions in Canada, bank liabilities have been classified in Table 9 in two main groups: liabilities to shareholders and liabilities to the public. Only the latter group is ordinarily considered when determining the financial position of any such institution. Assets are divided into four groups, 'other assets' being included in the total. Of interest to students of banking practice, the relative rates of increase of capital and reserve funds may be noted, also the great increase in the proportion of liabilities to the public to total liabilities, and the gradually increasing percentage of liabilities to the public to total assets. The declining proportion of notes in circulation to total liabilities to the public is also characteristic of the evolution of banking in recent times. Holdings of Government of Canada, provincial government and municipal securities were relatively insignificant prior to the War of 1914-18.

### 9.—Assets and Liabilities of the Chartered Banks, 1934-49

NOTE.—These statistics are yearly averages computed from the twelve monthly returns in each year. Figures for the years 1867-1880 will be found at pp. 918-919 of the 1938 Year Book; for the years 1881-1915 at pp. 815-816 of the 1941 edition; for the years 1916-26 at pp. 963-964 of the 1946 edition; and for the years 1927-33 at pp. 1025-1026 of the 1947 edition.

Grand Totals.....	1,938,216,427	2,100,653,519	2,408,371,950

**Cheque Payments.**—As indicated by the trend of cheques cashed, three major economic cycles have occurred since the First World War. The first cycle reached its peak in 1920 with the low point of the succeeding depression in 1922. A high point was next achieved in 1929, due in part to economic conditions involving heavy stock speculation. The low point was reached in 1932 and, with the exception of a minor setback in 1938, an upward trend has continued to the present time.

The amount of cheques cashed in the clearing centres of Canada advanced year by year from 1938 to reach a new maximum of \$87,600,000,000 in 1949. This advance paralleled the upward movement in the payment of salaries and wages caused mainly by the rise in rates and the greater distribution of consumer goods through wholesale and retail outlets.

As the amount of bank clearings takes account only of dealings between separate banks in clearing centres the cheque payments completed within one bank are not included. The inter-bank payments have become a lesser proportion of the total transactions during the past 25 years with the number of separate banks declining from 18 in 1923 to 10 in 1931, at which standing it has remained. No figures are currently available of the cheques charged to accounts in bank branches outside of clearing house centres, but from a total figure collected for January, 1935, additional transactions totalled 12.5 p.c. of those within the centres.

The advance in cheques cashed was general in each of the five economic areas in 1949 over 1948. Due to the inclusion after April, 1949, of St. John's, Newfoundland, the greatest percentage increase occurred in the Atlantic Provinces. Advances in Quebec were continuous from 1939. Ontario and the Prairie Provinces recorded increases from 1939 to 1945 followed by declines, but advances were resumed in Ontario during the past two years and the Prairies reported increases of about 13 p.c. in each of the past three years. British Columbia continued the year-by-year expansion recorded since 1938. Toronto increased consistently from 1939 to 1949. Montreal, Ottawa and Winnipeg showed increases over 1948 and Vancouver recorded gains continuously from 1938 to 1949.

**15.—Cheques Cashied at Individual Clearing-House Centres, 1945-49**

NOTE.—Figures for earlier years will be found in the corresponding tables in previous Year Books.

<sup>1</sup>Included from April, 1949.**Subsection 3.—Statistics of Individual Chartered Banks**

**Assets and Liabilities.**—Cash reserves against deposits as shown in Table 16 for the years 1944-49 comprise the total of Bank of Canada notes in the possession of the chartered banks together with their deposits at the Bank of Canada. Before the establishment of the Bank of Canada in 1935, the figures comprised the totals of the banks' holdings of gold and coin in Canada, Dominion notes, and that part of their deposits in the Central Gold Reserve not required against their note issues.

**16.—Principal and Total Assets of Individual Chartered Banks, 1944-49**

NOTE.—The statistics in this table are averages computed from the twelve monthly returns in each year. Figures for earlier years will be found in the corresponding table in previous Year Books.

**Earnings of Chartered Banks.**—The chartered banks of Canada are for the most part nation-wide institutions, doing business in all parts of the country. Their earnings, therefore, reflect with very considerable accuracy the fluctuations of general business.

<sup>6</sup> Exclusive

**Branches of Chartered Banks.**—During the period from 1881 to 1901, the number of chartered banks doing business in Canada under the Bank Act remained almost the same (36 in 1881 and 1891, and 34 in 1901), but during the present century there has been in banking, as in industry, an era of amalgamations, the number of banks having declined to 25 in 1913 and to 10 in 1931. That this has been far from involving a curtailment of banking facilities is seen in Table 9, which shows the development of the banking business since 1933, and in Table 19, which compares the number of branch banks existing in Canada at different periods, and indicates a growth from 123 in 1868 to 4,676, inclusive of sub-agencies, at Dec. 31, 1920. As at Dec. 31, 1944, the total stood at 3,087 (exclusive of 132 branches and 3 sub-agencies in other countries), the reduction having resulted from the closing of some unprofitable branches and also from contractions brought about by war-time conditions. By Dec. 31, 1949, the total had increased to 3,562 (exclusive of 105 branches and one sub-agency outside Canada).

## Section 6.—Government and Other Savings Banks

There are three distinct types of savings banks in Canada in addition to the savings departments of the chartered banks and of trust and loan companies. Firstly, there is the Post Office Savings Bank, in which deposits are a direct obligation of the Government of Canada. Secondly, there are Provincial Government savings banking institutions in Ontario and in Alberta, where the depositor becomes a direct creditor of the province. Thirdly, there are, in the Province of Quebec, two important savings banks, the Montreal City and District Savings Bank and La Banque d'Économie de Québec, established under federal legislation and reporting monthly to the Department of Finance. Other agencies for the promotion of thrift are the co-operative credit unions, which encourage the regular saving of amounts too small to deposit in a bank.

**Post Office Savings Bank.**—The Post Office Savings Bank was established under the Post Office Act of 1867 (31 Vict., c. 10) in order to “enlarge the facilities now available for the deposit of small savings, to make the Post Office available for that purpose, and to give the direct security of the nation to every depositor for repayment of all money deposited by him together with the interest due thereon”. Branches of the Government of Canada's Savings Bank under the Department of Finance were gradually amalgamated with this Bank over a period of 50 years, the amalgamation being completed in March, 1929.

### 22.—Financial Business of the Post Office Savings Bank, as at Mar. 31, 1944-49

NOTE.—Figures of total deposits for 1868-1917 will be found at pp. 833-834 of the 1926 Year Book and for 1918-43 at p. 978 of the 1946 edition.

**Provincial Government Savings Banks.**—Institutions for the deposit of savings are operated by the Provincial Governments of Ontario and Alberta. A similar institution was in operation in Manitoba from 1924 to 1932, when the depositors' accounts were taken over by the chartered banks.

**Ontario.**—The establishment of the Province of Ontario Savings Office was authorized by the Ontario Legislature at the 1921 session and in March, 1922, the first branches were opened. Interest at the rate of 1 and 1½ p.c. per annum compounded half-yearly is paid on accounts. The deposits are repayable on demand. Total deposits at Mar. 31, 1950, were \$68,981,250 and the number of depositors at that date was approximately 100,000. Twenty-two branches are in operation throughout the Province.

**Alberta.**—In Alberta, the Provincial Treasury receives savings deposits and issues demand certificates bearing interest at 1½ p.c. or term certificates for one, two, three, four or five years, in denominations of \$25 and upwards, bearing interest

at 2 p.c. for one or two years, 2½ p.c. for three or four years and 2½ p.c. for five years. The total amount in savings certificates at May 31, 1950, was \$1,062,503 made up of \$242,728 in demand certificates and \$819,775 in term certificates.

In addition, savings deposits are accepted at 45 Provincial Treasury Branches throughout the Province. The total of these deposits at Mar. 31, 1950, was \$16,309,363 made up of \$4,642,900 bearing interest at ½ of 1 p.c. to 1½ p.c. and payable on demand, and \$11,666,463 bearing interest at 1 p.c. to 2 p.c. and payable one year after deposit.

**Other Savings Banks.**—The Montreal City and District Savings Bank, founded in 1846 and now operating under a charter of 1871, had at Mar. 31, 1950, a paid-up capital and reserve of \$6,000,000, savings deposits of \$169,067,223, and total liabilities of \$176,409,012. Total assets amounted to \$176,952,497, including over \$149,000,000 of federal, provincial and municipal securities. La Banque d'Économie de Québec, founded in 1848 (as La Caisse d'Économie de Notre-Dame de Québec) under the auspices of the St. Vincent de Paul Society, incorporated by Act of the Canadian Legislature in 1855, and given a federal charter by 34 Vict., c. 7, had at Mar. 31, 1950, savings deposits of \$23,500,052, and a paid-up capital and reserve of \$3,000,000. Liabilities amounted to \$27,110,943 and total assets to \$27,514,423.

Table 23 shows the savings deposits in the Montreal City and District Savings Bank and La Banque d'Économie de Québec for the years ended Mar. 31, 1936-50.

**Credit Unions.\***—In August, 1950, credit union leaders from North America and overseas met at Lévis, Que., to take part in a celebration marking the 50th anniversary of the founding of the first credit union in North America on Dec. 6, 1900, by M. Alphonse Desjardins in the city of Lévis. This savings and credit institution was popularly called "la caisse populaire" or the people's bank and the initial capital and savings deposited amounted to \$26·40. From this small beginning, credit unions have spread to every province in Canada and every state in the United States so that now there are over 13,000 credit unions in North America with over 5,000,000 members.

In 1949 there were 2,819 credit unions chartered in Canada under provincial authority. Total membership of the 2,705 credit unions that reported to the provincial inspectors for the year was 940,427, an increase of about 90,000 over

\* Prepared by J. E. O'Meara, Economics Division, Marketing Service; Department of Agriculture, Ottawa.

1948. Total assets reported in 1949 were \$282,240,000 compared with \$253,600,000 in 1948 and total savings in the form of shares and deposits during 1949 amounted to \$264,000,000, an increase of approximately \$25,000,000. Loans made to members during 1949 were estimated to be \$99,537,166. Since the inception of the first credit union in 1900 a total of \$663,957,713 has been loaned to members for "provident and productive purposes".

Quebec and Ontario are the leading credit union provinces. Quebec has almost 1,200 caisses populaires with a membership of almost 600,000. Ontario has 436 credit unions with a membership of about 120,000.

*Leagues and Federations.*—Every province except Newfoundland has a credit union league or federation organized to promote and protect the members of the majority of all credit unions in the country. In addition, some of these leagues publish monthly magazines and newspapers and also arrange for group bonding of treasurers and the purchase of bookkeeping and office supplies on a co-operative basis. The leagues affiliated with the Credit Union National Association (CUNA) in the United States are able to insure their members' loans and savings with the Cuna Mutual Insurance Company. Policies issued by this Company insure the individual credit union against loss in the event of the death of a member with an outstanding loan balance. In addition, when a credit union member dies his savings are doubled to a named beneficiary.

There are 14 credit union leagues or federations in Canada—three in Quebec (one of which is divided into 10 regional unions), three in Ontario, two in New Brunswick and one in each of the other provinces with the exception of Newfoundland.

*Central Credit Unions.*—In order to balance up surplus and deficit funds among credit unions, central credit unions have been established in every province. These centrals receive money on deposit from the local credit unions and the locals may borrow from the centrals when their loan demand is high. In some cases intermediate-term loans are made by centrals which require term deposits from locals.

There are 19 central credit unions in Canada, eight of which are in the Province of Quebec. Assets of these centrals are about \$32,000,000.

## Section 7.—Foreign Exchange

## Subsection 1.—Exchange Rates

The Canadian dollar, adopted as Canada's currency in 1857, was equivalent to 15/73 of the pound sterling; in other words, the pound was equal to \$4.866 in Canadian currency at par, and remained so, with minor variations between the import and export gold points representing the cost of shipping gold in either direction, until the outbreak of the First World War. During the first eleven years after Confederation, the Canadian dollar was at a premium in the United States, as the United States dollar was not, after the Civil War, redeemable in gold until 1878. From the latter date, the dollar in the two countries was equivalent at par, and variation was only between the import and export gold points or under \$2 per \$1,000.

At the outbreak of the First World War, the United Kingdom and Canada suspended the gold standard, and their currencies fell to a discount at New York. However, this discount was 'pegged' or kept at a moderate percentage by sales of United States securities previously held in the United Kingdom, by borrowing in the United States and, after the United States entered the War, by arrangement with the

United States Government. After the War, when the exchanges were 'unpegged', the British pound went as low as \$3.18 and the Canadian dollar as low as 82 cents at New York. In the course of the next year or two, exchange returned practically to par, and the United Kingdom resumed gold payments in April, 1925, and Canada on July 1, 1926. From then until 1928 the exchanges were within the gold points, but in 1929 the Canadian dollar again fell to a moderate discount at New York. The dislocation of exchange persisted, with the exception of a few months in the latter half of 1930, into 1931. Dollar rates were below the gold export points, however, only for a few scattered intervals. Immediately on the outbreak of the Second World War in September, 1939, the United Kingdom and other sterling countries introduced foreign exchange control, involving fixed buying and selling rates which were \$4.02½ and \$4.03½, respectively, in terms of the U.S. dollar. Meanwhile, the Canadian dollar declined gradually until Sept. 16, when the Government established the Foreign Exchange Control Board. Fixed buying and selling rates were provided for United States funds and sterling at the outset, being \$1.10 and \$1.11, and \$4.43-\$4.47, respectively. The former rates fixed the value of the Canadian dollar at 90.09 cents to 90.91 cents in terms of the U.S. dollar; this was approximately the market rate to which the Canadian dollar had fallen just prior to exchange control, and in terms of devaluation represented a level midway between the U.S. dollar and sterling.

Apart from a minor adjustment on Oct. 15, 1945, when selling rates for U.S. dollars and sterling were lowered to \$1.10½ and \$4.45 respectively, the Foreign Exchange Control Board's official rates remained unaltered until July 5, 1946. At this time, the rate on the U.S. dollar was restored to par with buying and selling rates for U.S. dollars at \$1.00 and \$1.00½ and sterling, \$4.02 and \$4.04. These rates continued in effect until Sept. 19, 1949, when, following a 30.5-p.c. reduction by the United Kingdom in the value of sterling to \$2.80 U.S. (which action was paralleled in varying degrees by numerous other currencies), Canada returned to the former official rates of \$1.10 and \$1.10½ for United States funds; sterling was quoted at new rates of \$3.07¼ and \$3.08½, based on the New York cross rate.

On Sept. 30, 1950, the Minister of Finance announced that official fixed foreign exchange rates which had been in effect at varying levels since 1939 would be cancelled effective Oct. 2 and that rates of exchange would be determined by conditions of supply and demand for foreign currencies, i.e., by market trading, within the framework of exchange control. Subsequently, the U.S. dollar fell to a level between \$1.04 and \$1.05 in terms of Canadian funds in early December, 1950.

The foregoing review is exclusive of the free market for Canadian dollars in New York which existed until the suspension of fixed rates. The Foreign Exchange Control Board has permitted transfers between non-residents of Canadian dollars which were not convertible into foreign exchange at official rates; these consisted of non-resident owned bank balances, augmented by receipts from maturing capital obligations to non-residents in Canadian funds and certain restricted payments by residents. They could be used mainly for travel and capital investment in Canada. The volume of such trading in Canadian funds was very small in relation to turnover in the official market; it was almost entirely outside the orbit of dealings between residents and non-residents; and quotations were frequently erratic owing to the narrow market, varying from virtual parity with official rates to as much as 15 p.c. under these.

### Subsection 2.—The Foreign Exchange Control Board\*

The main operations of the Foreign Exchange Control Board during 1948 and the first half of 1949 are given at p. 1081 of the 1950 edition. Reviews of the Board's activities in earlier years will be found in previous Year Books.

**Changes in Exchange Control Policies and Methods.**—The Foreign Exchange Control Regulations were amended in November, 1949, March, 1950, and July, 1950, to add Italy, Denmark and Austria, respectively, to the list of "special arrangement countries". After those dates Canadian dollars became acceptable in payment for exports to the countries concerned and reasonable amounts of Canadian dollars were authorized for travel expenditures by Canadian residents in those countries.

As indicated in Subsection 1, the designation of official rates of exchange was withdrawn effective on Oct. 1, 1950. Since that date the rates for purchases and sales of exchange in Canada have been determined by conditions of supply and demand. A result of the new system of establishing exchange rates was that the so-called unofficial rates for Canadian dollars at New York and other centres disappeared. In other respects the general structure of exchange control remained unchanged although the following consequential modifications in the Regulations were made at that time:

(1) While a Canadian resident is still obliged forthwith to declare to an authorized dealer foreign exchange which he receives, the former requirement of selling the exchange to the authorized dealer at the same time was removed. Instead of selling the exchange immediately, he may deposit it in a special foreign currency account with the authorized dealer for sale within the next 90 days.

(2) Former limits on the purchase and sale of foreign exchange for forward delivery were removed and it is now open to any resident of Canada to arrange with his bank for a forward contract for any purpose or term. Delivery of exchange under such a contract may, however, be made or taken only where it is to be used for an approved purpose.

Early in October, 1950, the Board was instructed to discontinue the limitation on pleasure travel expenditures of 150 U.S. dollars during a 12-month period and to authorize Canadian residents to obtain and use any reasonable amounts of U.S. dollars for all types of bona fide travel expenditures in the United States and other non-Sterling Area countries. At the same time the amount which a traveller may take from Canada without permit was increased from \$10 to \$50 in foreign currency and from a total of \$25 to \$100 in foreign and Canadian currency. Banks were authorized to approve permits for amounts up to \$500 per trip for business travel and \$500 per year for travel for other purposes and to refer larger applications to the Board. Similarly, the general exemption from completion of a permit form for applications for U.S. dollars in a form other than currency was increased from \$10 to \$50 and the authority of banks and other agents to sell U.S. dollars for benevolent remittances was increased from \$10 to \$50 per applicant per month. The maximum amount of funds which a resident of Canada is permitted to transfer from Canada upon moving to a United States dollar area country for permanent residence was also increased from \$12,500 to \$25,000 during the first year.

\* Revised under the direction of R. H. Tarr, Secretary, Foreign Exchange Control Board.

Since November, 1950, Canadian subsidiaries and branches of foreign companies have been authorized to remit earnings on the basis of interim financial statements for quarterly or longer periods. Formerly such remittances were authorized only on an annual basis.

In December, 1950, the Regulations were amended to permit Canadian residents to accept payment in either U.S. or Canadian dollars for services performed for residents of United States dollar area countries. Previously payment in U.S. dollars only was acceptable, which continues to be the case for export shipments to those countries.

The variations in Canada's holdings of gold and U.S. dollars since the commencement of exchange control are given in Table 26. The developments in the balance of international payments which gave rise to the increase during 1948 are reviewed in the Foreign Trade Chapter at pp. 928-935.

<sup>1</sup> Includes private holdings, exclusive of working balances, of \$132,000,000 at Sept. 15, 1939, \$98,000,000 at Dec. 31, 1939, and \$2,000,000 at Dec. 31, 1940. <sup>2</sup> Sept. 15. <sup>3</sup> Excludes \$18,200,000 borrowed in the United States in August, 1949, and set aside for the retirement on Feb. 1, 1950, of a security issue guaranteed by the Federal Government and payable at the holder's option in United States dollars.

## PART II.—MISCELLANEOUS COMMERCIAL FINANCE

### Section 1.—Loan and Trust Companies\*

The 1934-35 Year Book presents at p. 993 an outline of the development of loan and trust companies in Canada from 1844 to 1913.

The laws relating to loan and trust companies were revised by the Loan and Trust Companies Acts of 1914 (4-5 Geo. V, cc. 40 and 55), with the result that the statistics of provincially incorporated loan and trust companies ceased to be collected. However, summary statistics of provincial companies for 1947 and 1948 have been supplied by those companies and are included in Table 1 in order to complete the statistics for loan and trust companies throughout Canada. It is estimated that more than 90 p.c. of the business of provincial companies is represented in the figures, so that they may be accepted as fairly inclusive and representative of the volume of business transacted as compared with federal-registered companies. The statistics of Tables 2 and 3 refer only to those companies operating under federal charter, except that, beginning with 1925, the statistics of loan

\* Revised under the direction of R. W. Warwick, Superintendent of Insurance, Department of Insurance.

companies and trust companies incorporated by the Province of Nova Scotia and brought by the laws of that Province under the examination of the Federal Department of Insurance, have been included in Tables 2 and 3 as well as those for trust companies in New Brunswick since 1934 and in Manitoba since 1938. In 1920, the Department of Insurance took over from the Department of Finance the administration of the legislation concerning federal loan and trust companies.

The progress of the aggregate of loan company business in Canada is indicated by the increase in the book value of the assets of all loan companies from \$188,637,298 in 1922 to \$243,548,783 in 1948. The assets of trust companies (not including estates, trust and agency funds, which cannot be regarded as assets in the same sense as company and guaranteed funds) increased from \$154,202,165 in 1928 to \$366,544,305 in 1948. In the former year, the total of estates, trust and agency funds administered amounted to \$1,077,953,643 and in 1948 to \$3,312,445,115.

**Functions of Loan Companies.**—The principal function of loan companies is the lending of funds on first-mortgage security, the money thus made available for development purposes being secured mainly by the sale of debentures to the investing public and by savings-department deposits. In the war years from 1939 to 1945 the amount invested in mortgages declined by almost \$27,000,000, which was practically all accounted for by an increase in the amount of bonds and stocks held. The 1948 figure of \$93,000,000 was greater by \$14,000,000 than that for 1947.

**Functions of Trust Companies.**—Trust companies act as executors, trustees and administrators under wills or by appointment, as trustees under marriage or other settlements, as agents or attorneys in the management of the estates of the living, as guardians of minor or incapable persons, as financial agents for municipalities and companies and, where so appointed, as authorized trustees in bankruptcy. Such companies receive deposits for investment, but both the investing and lending of such deposits and of actual trust funds are restricted by law.

**Statistics of Loan and Trust Companies.**—A summary of operations of provincial and federal loan and trust companies is given in Table 1. As a result of the nature of these operations, which are intimately connected with the matter of probate, the larger trust companies usually choose to operate under provincial charters, and the provincial figures represent much larger amounts than those of the federal companies.

The figures for federal loan companies include companies chartered by the Government of Nova Scotia which, by arrangement, come under inspection by the Federal Department of Insurance. The data for federal trust companies, likewise, cover companies chartered by the Governments of Nova Scotia, New Brunswick and Manitoba for the same reason.

Table 1 gives complete coverage for all companies for the final analyses shown. Table 2 breaks down the assets and liabilities of federal loan companies: it is not possible to give comparable analyses for provincial companies. The Department of Insurance is undertaking the compilation of the necessary information the results of which will be made available in the 1952 Year Book.

As regards trust companies, provincial figures are given for Ontario and Quebec only in Table 3B but, since companies operating under charters issued by Nova Scotia, New Brunswick and Manitoba are included with federal companies (see headnote to Table 3A), the coverage is fairly complete: actually the coverage is 95 p.c. of all companies.

<sup>1</sup> Chartered by the Government of Canada, including also companies chartered by the Governments of Nova Scotia, New Brunswick and Manitoba, which by arrangement are inspected by the Federal Department of Insurance.<sup>2</sup> Excludes provincial companies of Nova Scotia, New Brunswick and Manitoba which are included in federal companies.

## Section 2.—Licensed Small Loans Companies and Licensed Money-Lenders

Four companies have been incorporated by the Parliament of Canada that make small loans, usually not exceeding \$500 each, on the promissory notes of the borrowers and additionally secured in most cases by endorsements or chattel mortgages. While these companies, under their original charter powers, were permitted to make loans on the security of real estate, that power was withdrawn by the Small Loans Act, 1939.

On Jan. 1, 1940, the Small Loans Act, 1939 (3 Geo. VI, c. 23), came into force, by which the above-mentioned small loans companies and money-lenders licensed thereunder, making personal loans of \$500 or less, are limited to a rate of cost of loan not in excess of 2 p.c. per month on outstanding balances, and unlicensed lenders to a rate of 12 p.c. per annum, including interest and charges of every description.

### 5.—Assets and Liabilities of Small Loans Companies Chartered by the Federal Government, as at Dec. 31, 1939-48

NOTE.—Figures for the years 1928-32 will be found at p. 838 of the 1942 Year Book and for the years 1933-38 at p. 988 of the 1946 edition.

Year	ASSETS

<sup>1</sup> First year Small Loans Act in operation.

<sup>2</sup> Not including balances other than small loans.

<sup>3</sup> Includes \$200,000 bonds, debentures and stock.

<sup>4</sup> Includes \$250,000 bonds.

<sup>5</sup> Includes

\$250,000 bonds and \$1,534,756 balances of loans made in amounts greater than \$500.

<sup>6</sup> Includes

\$4,046,210 balances of loans in amounts greater than \$500.

<sup>7</sup> Includes \$6,762,669 balances of loans in amounts greater than \$500.

<sup>8</sup> Includes taxes.

<sup>9</sup> No unearned income, since from 1940 small

loans have been on an earned basis.

<sup>10</sup> Includes business other than small loans.

<sup>11</sup> Includes

\$5,515 premium on capital stock.

The small loans companies chartered by the Federal Government show a substantial increase in business for 1948 as compared with the previous year. The number of loans made to the public during the year increased from 294,602 to 376,456, or by 28 p.c. and the amount of such loans rose from \$50,761,348 to \$69,912,461. The average loan was approximately \$186 compared with \$172 in 1947. At the end of 1948, loans outstanding numbered 259,184 for an amount of \$36,533,501, or an average of \$141 per loan.

**Licensed Money-Lenders.**—In addition to the above-mentioned small loans companies, 53 licensed money-lenders furnished annual statements of their business, showing, for 1948, total assets of \$19,767,432, of which balances of small loans amounted to \$6,115,156, other balances to \$12,669,315, bonds, debentures and stocks to \$211,074, real estate to \$55,132, cash to \$345,519, and other assets to \$371,236. Liabilities amounted to \$19,769,263, of which borrowed money accounted for \$13,788,550 and paid shares and partnership capital for \$3,342,809. Loans made in 1948 numbered 61,999, totalling \$12,131,871 and averaging almost \$196, a decrease of 48 p.c. in number and 52 p.c. in the gross amount; at the end of the year there were 43,961 loans outstanding with a total of \$6,115,156 averaging \$139. About 26 p.c. of the loans made in 1948 were between \$400 and \$500. Further details of this type of business are given in the 1948 report "Small Loans Companies and Money-Lenders Licensed under The Small Loans Act, 1939", published by the Federal Department of Insurance.

### Section 3.—Sales of Canadian Bonds\*

Previous editions of the Year Book have traced the sales of Canadian bonds through the interesting periods of two world wars and in the post-war years to the conclusion of financing in 1947. In the 1950 edition, at pp. 1088-1094, a detailed account was published of "The Underwriting and Distribution of Investments and their Influence on the Capital Market in Canada". The present edition brings the tables for sales of and applications for Government of Canada bonds and sales of Canadian bonds, by class of bond and country of sale, to the end of 1949, with particular reference to significant developments on Canadian bond markets in that year.

Public bond financing for 1949 totalled \$1,676,311,484, compared with \$1,173,640,941 for 1948. This 1949 aggregate includes sales of Canada Savings Loan, Series 4, to May 31, 1950, only whereas figures for 1948, 1947 and 1946 include figures for the entire savings loans flotations to the closing dates of the subsequent years. (See Table 6.) When complete figures are available for the Canada Savings Loan in 1949, the total aggregate bond financing in that year will be greater than the total for 1948.

The Canadian bond market absorbed virtually all of the new bond financing with the exception of \$105,000,000 in the government and municipal sections which were sold in the United States, this amount being reduced from \$150,000,000 in 1948. In the corporation field, \$35,000,000 were sold in the United States in 1949 while in 1948 no financing was done in this category outside of Canada.

Most of the Government of Canada financing during 1949, as in previous years, was not in the nature of direct offerings to the general public. For this reason, the totals for treasury bills, deposit certificates and other financing for less than

\* Prepared by E. C. Gould, Editorial Staff, *The Monetary Times*.

a term of one year, have been excluded from the totals of bond sales. One notable exception to this trend in federal financing was Series 4 of Canada Savings bonds. In respect to the payroll division of this flotation, it is noteworthy that the number of individual subscriptions was well represented.

Provincial and guaranteed flotations in 1949 totalled \$449,347,000, an increase of \$136,727,500 over the \$312,619,500 total for the previous year. The necessity for power developments and for new highway construction accounted, in large measure, for this increase. With the exceptions of Alberta and Newfoundland, all provinces entered the market in 1949 as follows:—

<u>Month</u>	<u>Province</u>	<u>Amount</u>	<u>Month</u>	<u>Province</u>	<u>Amount</u>
January.....	New Brunswick.....	\$ 5,556,000	September.....	New Brunswick.....	\$ 8,000,000
January.....	Saskatchewan.....	4,000,000	September.....	Ontario.....	60,000,000
February.....	Manitoba.....	6,700,000	September.....	Saskatchewan.....	4,000,000
February.....	Quebec.....	35,000,000	November.....	Ontario.....	40,000,000
May.....	New Brunswick.....	6,500,000	December.....	British Columbia.....	15,000,000
May.....	Saskatchewan.....	3,000,000	December.....	Prince Edward Island.....	2,000,000
June.....	Nova Scotia.....	19,000,000	December.....	Nova Scotia.....	9,000,000
June.....	British Columbia.....	11,000,000			
August.....	Quebec.....	15,000,000	TOTALS.....		\$254,756,000
August.....	Manitoba.....	11,000,000			

The remainder of the \$449,347,000 in provincial and guaranteed financing for 1949 was for municipal issues that were provincially guaranteed, for provincial hydro developments and for a \$7,500,000 issue of the University of Toronto, guaranteed by the Province of Ontario.

Municipal financing totalled \$134,796,184 for 1949, exclusive of a total of \$23,853,200 for parochial and miscellaneous purposes (chiefly for schools and hospitals). These totals compared with \$84,014,291 and \$21,010,000, respectively, for 1948. The largest single amount borrowed by any one municipality during 1949 was represented by an issue of the city of Toronto, through three serial issues in May, totalling \$10,186,000. The only issue reported from the Province of Newfoundland was a \$535,000, 3½ p.c. flotation of the city of St. John's, maturing Dec. 1, 1969, and offered at \$96.50.

Corporation financing during 1949 totalled \$285,268,000 a decline of \$25,238,000 from the \$310,506,000 total of the previous year. Corporation bond prices, however, showed considerable strength in 1949, particularly in the last six months of the year. The most interesting features in the corporation field were the three issues of Interprovincial Pipe Line Company consisting of: \$37,000,000, 3½ p.c. First Mortgage and Collateral Trust Bonds, Series "A" and \$35,000,000, Series "B", due Jan. 1, 1970, both sold largely to institutions together with \$17,000,000 Convertible Sinking Fund, 4 p.c. Debentures Series "A", due Oct. 1, 1970, of which \$7,500,000 were sold publicly in Canada.

The largest issue in 1949 of any concern engaged in the transportation industry was the \$70,000,000 flotation of the Canadian National Railways. Several transportation corporations, however, sold issues of equipment trust certificates. These issues included a \$1,000,000-issue of the Provincial Transport Company and a \$2,000,000-issue of the Toronto, Hamilton and Buffalo Railway Company.

*The Monetary Times* records indicate that 30 provincial and guaranteed issues, 522 municipal issues (including parochial and miscellaneous) and 56 corporation issues were placed during 1949. These figures compare with 32 provincial and Guaranteed issues, 516 municipal issues and 76 corporation issues placed during 1948.

### 6.—Sales of and Applications for Federal Government Bonds, Feb. 1, 1940, to Nov. 1, 1949

Nov. 1, 1949.....	313,047,100	—	313,047,100	995,212

<sup>1</sup> Department of Finance figure.<sup>2</sup> Total subscriptions were limited to \$2,000 for any one individual for the 1946 issue and to \$1,000 for subsequent issues. Figures for 1946 to 1948, inclusive, are for the entire loan (i.e., to the closing date on Aug. 31 of the subsequent year). Figures for 1949 are to May 31, 1950.

### 7.—Sales of Canadian Bonds, by Class of Bond and Country of Sale, 1940-49

(From the *Monetary Times Annual*)

NOTE.—Figures for the years 1904-25, inclusive, are given at p. 921 of the 1933 Year Book and for 1926-37 at pp. 990-991 of the 1946 edition. Since 1936 much of the borrowing for the Canadian National Railways has been done directly by the Federal Government and since the War the Federal Government has advanced money to both the Canadian National and Canadian Pacific Railways for the purchase of equipment. For this reason such small bond issues as have been made by the Canadian Pacific Railway are included under "Corporation".

Year	CLASS OF BOND					
	Federal <sup>1</sup>	Provincial	Municipal	Parochial and Miscellaneous	Corporation	Total
	\$	\$	\$	\$	\$	\$
1940.....	1,180,642,200	168,820,000	25,211,093	—	25,777,000	1,400,450,293

Subsection 2. Historical and Operational Statistics of Life Insurance Companies Registered by the Federal Government	1076		

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Insurance, for the purpose of statistical analysis, is usually classified as fire, life and casualty. Most companies operate under Federal Government (Dominion) registration although some have provincial licences only. Many fraternal orders and societies, too, are engaged in this kind of business. An extended treatment of the salient features of the legislation covering insurance in general and the fields of federal and provincial jurisdiction will be found in the 1941 Year Book at pp. 844-846. The 1942 Year Book, at pp. 842-846, contains a special article on the developments in fire and casualty insurance in Canada between 1931 and 1940, consequent upon the enactment of the three Insurance Acts of 1932, while an article on insurance as it affects the balance of international payments appears at pp. 870-871 of the same edition. The 1947 Year Book, at pp. 1064-1074, includes an article on insurance in Canada during the depression and war periods.

## Section 1.—Fire Insurance

In Canada, fire insurance began with the establishment of agencies by British fire insurance companies. These were situated usually at the seaports and operated by local merchants. The oldest existing agency of such a company commenced business at Montreal in 1804. The first Canadian company dates from 1809 and the first United States company to operate in Canada commenced business in 1821. A short account of the inception of fire insurance in Canada is given at pp. 846-847 of the 1941 Year Book.

\*Material in this Chapter, except where otherwise indicated, has been revised under the direction of R. W. Warwick, Superintendent of Insurance, Department of Insurance.

The report of the Superintendent of Insurance for the year ended Dec. 31, 1948, shows that at that date there were 274 fire insurance companies under Dominion registration; of these, 63 were Canadian, 76 were British, and 135 were foreign companies. In 1875, the first year for which authentic records were collected by the Department of Insurance, 27 companies operated in Canada—11 Canadian, 13 British and 3 United States. The proportionate increase in the number of British and foreign companies from 59 p.c. to 77 p.c. of the total number is a very marked point of difference between the fire and life insurance businesses in Canada, the latter being carried on very largely by Canadian companies.

#### Subsection 1.—Grand Total of Fire Insurance in Canada

Of the total amount of insurance effected in Canada during each year, a part is sold by the companies holding provincial licences and permits. Such companies generally confine their operations to the province of incorporation but may be allowed to sell insurance in other provinces.

In the more detailed analyses of fire insurance given in Table 2, the statistics cover only the operations of companies with Dominion registration; as shown in Table 1, such companies account for approximately 90 p.c. of the insurance in force.

## 1.—Fire Insurance in Canada, 1948

Item	Gross Insurance Written	Net in Force at End of Year	Net Premiums Written	Net Claims Incurred

## Subsection 2.—Operational Statistics of Fire Insurance Companies Registered by the Federal Government

The trend in the average rate payable for fire insurance has been generally downward, although the increases in fire losses in recent years, have had the effect of checking that tendency. The increase in value of insurable buildings and their contents tends to increase fire insurance premiums in spite of the trend of the average rate.

## 2.—Fire Insurance, by Companies Operating under Dominion Registration, Decennially 1880-1940 and 1941-49

NOTE.—Figures for the years 1869-99 are given at p. 973 of the 1939 Year Book, and figures for 1901-39 at p. 847 of the 1942 edition.

Year	Amount in Force at End of Year	Net Premiums Written During Year	Net Claims Incurred During Year	Percentage of Claims to Premiums	Gross Amount of Risks Taken During Year	Premiums Charged Thereon	Average Cost per \$100 of Insurance

<sup>1</sup> Yukon and Northwest Territories, also certain 'floater business' that cannot be apportioned to any one province.

**Classification of Fire Risks.**—For some years the Department of Insurance has compiled, from information supplied by the fire insurance companies registered to transact business in Canada, tables of experience as to premiums and claims by 27 classes of risks agreed upon on the basis of net premiums written, less registered or licensed reinsurance. This experience for the years 1940-44 is given at p. 1077 of the 1947 Year Book. The returns from 1945 were received on a 'direct written' basis, excluding all reinsurance ceded or assumed, and the classification was changed and reduced to 21 classes. The 1947 and 1948 experience is given in Table 4.

### 4.—Percentages of Claims Incurred to Premiums Written in Canada by All Companies Operating under Dominion Registration, by Classes of Risks, 1947 and 1948

### Subsection 3.—Finances of Fire Insurance Companies

Tables 5 to 7 show for recent years the assets, liabilities, income and expenditure of registered companies transacting fire insurance in Canada. The majority of fire insurance companies also transact casualty insurance dealt with in Section 3 of this Chapter. Because it is impossible for such companies to allocate their assets and liabilities and their general income and expenditure among the various types of business transacted, totals only are given here. Table 28, p. 1090, gives similar information for registered companies whose transactions are confined to casualty insurance.

<sup>1</sup> Available for the first time in 1946.

<sup>2</sup> See footnote to Table 8.

The property losses by provinces given in Table 9 are the total fire losses insured and uninsured. The percentages of the provincial total uninsured were as follows: Prince Edward Island, 47; Nova Scotia, 30; New Brunswick, 30; Quebec, 36; Ontario, 23; Manitoba, 16; Saskatchewan, 27; Alberta, 6; British Columbia, 21; and Yukon and the Northwest Territories, 52. Uninsured losses formed 27 p.c. of total losses for Canada.

## Section 2.—Life Insurance

Life insurance in force in Canada, in companies registered by the Federal Government, was over \$14,408,000,000 at the end of 1949, an increase of more than \$1,303,000,000 during the year. There was not only an increase in new business, but also a greater stability in business written compared with the depression and early war years. The effect of these factors is reflected in the ratio of gain in business in force expressed as a percentage of the amount in force at the beginning of the same year.

Year	Net in Force at Beginning of Year	Gain in Force for the Year	Percentage Gain
	\$	\$	
1930.....	6,157,000,000	335,000,000	5.4
1935.....	6,221,000,000	38,000,000	0.6
1939.....	6,630,000,000	146,000,000	2.2
1940.....	6,776,000,000	199,000,000	2.9
1941.....	6,975,000,000	374,000,000	5.4
1942.....	7,349,000,000	527,000,000	7.2
1943.....	7,876,000,000 <sup>1</sup>	658,000,000	8.4
1944.....	8,534,000,000	605,000,000	7.1
1945.....	9,139,000,000	612,000,000	6.7
1946.....	9,751,000,000	1,061,000,000	10.9
1947.....	10,812,000,000	1,088,000,000	10.1
1948.....	11,900,000,000	1,205,000,000	10.1
1949.....	13,105,000,000	1,303,000,000	9.9

<sup>1</sup> Excluding \$44,000,000 adjustment arising out of method of reporting juvenile insurance.

## Subsection 1.—Grand Total of Life Insurance in Canada

In addition to the business transacted by life insurance companies registered by the Federal Government, a considerable volume of business is also transacted by companies licensed by the provinces. Statistics of these provincial companies have been collected since 1915 by the Department of Insurance. Table 12 summarizes the volume of business transacted by Canadian, British and foreign life insurance companies and fraternal societies, whether registered by the Federal Government or licensed by the provinces.

### Subsection 2.—Historical and Operational Statistics of Life Insurance Companies Registered by the Federal Government

The net life insurance in force in all companies with Dominion registration was only \$35,680,082 in 1869, while in 1949 it was \$14,408,763,850.\* The amount per head of the estimated population of Canada has more than doubled since 1926—evidence of the general recognition of the value of life insurance for the adequate protection of dependants against misfortune. Notable also is the fact that in this field British companies, the leaders in 1869, have fallen far behind Canadian and foreign companies.

#### 13.—Life Insurance in Force and Effected in Canada by Companies operating under Dominion Registration (Fraternal Insurance Excluded)<sup>1</sup>, 1880-1949

NOTE.—Figures for the years 1869-99 are given at p. 958 of the 1938 Year Book, and figures for the years 1901-39 at p. 855 of the 1942 edition.

Year	Net Amounts in Force				Insurance in Force per Head of Estimated Population <sup>2</sup>	Net Amount of New Insurance Effected during Year

<sup>1</sup> For statistics of fraternal insurance, see pp. 1081-1083.  
at p. 121.

<sup>3</sup> 1949 figures are subject to revision.

<sup>2</sup> Based on estimates of population given

Life insurance business was transacted in Canada during 1948 by 51 active companies with Dominion registration, including 30 Canadian, 5 British and 16 foreign companies; one of these foreign companies was registered only for the acceptance of reinsurance. In addition to these active companies, there were 8 British and 3 foreign companies writing little or no new insurance, their business being confined largely to the policies already on their books.

The operations analysed in the tables of this Subsection, with the exception of Table 17, cover only those companies with Dominion registration and are exclusive of fraternal organizations and provincial licencees. However, as indicated in Table 12, their operations cover over 94 p.c. of the life insurance in force in Canada

\* This total does not include fraternal insurance.

### 14.—Life Insurance in Canada by Companies operating under Dominion Registration, 1946-48

**Subsection 3.—Finances of Life Insurance Companies**

The financial statistics of the following tables cover only life insurance companies with Dominion registration and do not include fraternal organizations and provincial licensees. In the cases of British and foreign companies, the figures apply only to their assets, liabilities and operations in Canada but, in the case of Canadian companies, assets and liabilities, income and expenditure, arise in part from business abroad.

### 18.—Assets of Canadian Life Companies with Dominion Registration and Assets in Canada of British and Foreign Life Companies, 1944-48

NOTE.—One British company transacting fire insurance in Canada transacts also life insurance in Canada and, inasmuch as a separation of assets has not been made between these two classes, the assets in Canada are not included here, but are included in the assets of British companies shown in Table 5, p. 1070.

Assets	1944	1945	1946	1947	1948

<sup>1</sup> A detailed classification of assets showing investments of Canadian companies and giving the percentage of the total in each group and sub-group for 1946, 1947 and 1948 will be found at p. xvi of the Report of the Superintendent of Insurance, Vol. II, for the year ended Dec. 31, 1948.

<sup>2</sup> Book values. The totals carried into the balance sheets for 1944 (amounting to \$3,140,001,113) included some market values of these assets. After 1944, book values were in all cases carried into the balance sheet, any excess of book over market values being covered by a reserve in the liabilities.

<sup>3</sup> None reported.

**Subsection 4.—Life Insurance Effected through Fraternal Benefit Societies**

In addition to life insurance, some fraternal benefit societies grant other insurance benefits to members, notably sickness benefits, but these are relatively unimportant. Table 21 gives statistics of life insurance effected through fraternal benefit societies by Canadian members, together with statistics of assets, liabilities, income and expenditure relating to the whole business of Canadian societies and to the business in Canada of foreign societies. The rates charged by these societies are computed to be sufficient to provide the benefits granted, having regard for actuarial principles. The benefit funds of each society must be valued annually by a qualified actuary (Fellow, by examination, of the Institute of Actuaries, London; of the Faculty of Actuaries in Scotland; of the Society of Actuaries; or of the American Institute of Actuaries) and, unless the actuary certifies to the solvency of each fund, a readjustment of rates or benefits must be made. The statistics in the first part of Table 21 relate to the 15 Canadian societies reporting to the Insurance Department of the Federal Government, only one of which does not grant life insurance benefits.

Under an amendment to the Insurance Act, effective Jan. 1, 1920, all foreign fraternal benefit societies were required to obtain authority from the Federal Government prior to transacting business in Canada. However, any such societies which at that date were transacting business under provincial licences, while forbidden to accept new members, were permitted to continue all necessary transactions in respect of insurance already in force. Most of these societies and some foreign societies that had not previously been licensed by the provinces have since obtained federal authority to transact business. Of both classes of societies, 29 transacted business in Canada during 1948, two of which do not grant life insurance benefits.

**Subsection 5.—Life Insurance in Force Outside Canada by Canadian  
Companies Registered by the Federal Government**

Tables 22 and 23 give summary statistics of insurance in force as at Dec. 31, 1948, in currencies other than Canadian, classified by companies and by the currencies in which business was written. The data given here are in Canadian dollars, mainly at par rates of exchange for the countries concerned, but there are

several exceptions where, for purposes of account, certain companies have converted foreign currencies at rates other than par, particularly where the current rate differs substantially from the par rate. More than 63 p.c. of all such business in force was written in United States currency and over 21 p.c. in sterling. From another standpoint, over 31 p.c. was written in currency of British countries outside Canada, and over 68 p.c. in currencies of foreign countries.

Canadian life companies operating under Dominion registration had in force in countries outside Canada, at Dec. 31, 1948, life insurance amounting to \$4,812,137,865, and sinking fund and capital redemption insurance amounting to \$5,641,806. As shown in Table 22, insurance in force in currencies other than Canadian amounted to \$4,655,861,043. The difference between these figures is presumably the net amount of non-Canadian business transacted in Canadian currency. As against the total non-Canadian business, including annuity business, the British and foreign investments of Canadian life insurance companies as at Dec. 31, 1948, amounted to \$1,574,077,934. Since the business in force in Canada of these companies at Dec. 31, 1948, amounted to \$8,832,474,877 (including sinking fund of \$1,522,011), the total business on their books, Canadian and non-Canadian, amounted to \$13,650,254,548. Thus, over 35 p.c. of the total business in force was outside Canada.

**Subsection 6.—Grand Total of All Life Insurance in Canada and the Business of Canadian Organizations Abroad**

Table 24 summarizes the business outside Canada of Canadian life companies and fraternal benefit societies. If to these figures is added the business in Canada of these organizations, as shown in Table 12, the total business, internal and external, of all Canadian life insurance companies and fraternal societies may be obtained. Again, adding the business in Canada of British and foreign companies and fraternal societies, a grand total is obtained of all life insurance in Canada and of the life insurance business abroad of Canadian organizations; this total is shown in Table 25.

**24.—Business Abroad of Canadian Life Companies and Fraternal Societies, 1948**

NOTE.—Figures for business in Canada will be found in Table 12, p. 1075.

### Section 3.—Casualty Insurance

Since 1875, the growth of casualty insurance business has been steady. The report of the Superintendent of Insurance for the calendar year 1880 shows that the number of companies licensed for the transaction of accident, guarantee, plate glass and steam-boiler insurance—the only four classes of casualty insurance then transacted—was 5, 3, 1 and 1, respectively. The report for the year 1948 shows that casualty insurance in Canada now includes various forms of accident and 23 other classes of insurance transacted by companies with Dominion registration. In 1880, 10 companies transacted casualty insurance, but in 1948 such insurance was issued by 267 companies, of which 59 were Canadian, 73 British and 135 foreign; of these, 191 companies also transacted fire insurance. In addition, 20 fraternal orders or societies carried on accident and sickness insurance as well as life insurance business and 3 fraternal orders or societies carried on accident or sickness insurance only.

Table 27 shows the division of business in this field between federal and provincial licensees, and indicates that, as in the cases of fire and life insurance, the bulk of the business (about 90 p.c. in this case) is transacted by companies with Dominion registration.

Since, as indicated above, most of the companies carrying on casualty insurance in Canada also transact fire insurance, their assets, liabilities, income and expenditures are included in the financial statistics of fire insurance companies given in Section 1, Subsection 3, of this Chapter. Table 28 gives similar figures for the total casualty business of Canadian companies, and for the casualty business in Canada of British and foreign companies, whose transactions are confined to insurance other than fire and life. In 1948, there were 13 Canadian, 7 British and 56 foreign companies whose operations were limited to the same field.

During the war years, automobile insurance showed a favourable experience with a loss ratio of around 45 p.c. This ratio was slightly lower than for the pre-war years, the result of lessened traffic, but since the end of hostilities the experience tends to be less favourable and in 1948 stood at about 52 p.c.

Hail insurance in 1947 showed a loss ratio of 67 p.c. but in 1948 this had decreased to 64 p.c.

Marine insurance showed a very large increase in Canada during the war years and substantial profits resulted. The results for the years 1941 to 1948, inclusive, were as follows:—

Year	Premiums	Claims Incurred	Under-writing Profits
	\$	\$	\$
1941.....	6,011,922	2,781,190	1,694,470
1942.....	14,295,543	7,983,963	3,855,415
1943.....	10,061,059	4,931,286	3,449,873
1944.....	6,754,361	2,172,418	3,243,889
1945.....	5,978,274	2,995,704	1,704,367
1946.....	5,655,392	2,232,701	2,084,412
1947.....	7,932,404	4,529,161	1,031,313
1948.....	7,986,658	3,468,045	2,466,397

This class of insurance will, no doubt, continue to figure more largely in the business of companies in post-war years than it did before 1939.

### Section 4.—Government Insurance

In addition to the insurance provided by private insurance companies various types of government insurance schemes have been adopted in recent years by the Federal and Provincial Governments. This Section deals briefly with the principal schemes now in effect.

Only those schemes dealing with the types of insurance covered in the previous Sections of this Chapter, viz., fire, life and casualty, are dealt with here. Information on unemployment insurance, health insurance, export credits insurance, etc., will be found in the Chapters on Labour, Health and Welfare, Foreign Trade, etc.

**Veterans Insurance.\***—The Veterans Insurance Act which came into force on Feb. 20, 1945, is a Federal Government Statute which provides that veterans of the Second World War, the widows and widowers of veterans, disability pensioners under the Pension Act in receipt of pensions relating to the War, most members of the Active Forces, and certain merchant seamen, may contract with the Government of Canada for life insurance, usually without medical examination. The period of eligibility ends six years after the coming into force of the Act or six years after discharge from Service, whichever is later. For the Active Forces generally it will end on Apr. 1, 1952, and for the eligible merchant seamen it will end on Feb. 20, 1951.

The amount of insurance may be any multiple of \$500 up to a maximum of \$10,000. The plans of insurance available are 10-payment life, 15-payment life, 20-payment life, and life with premiums payable until age 65 or age 85. The policies are non-participating.

Premiums on veterans insurance may be paid monthly, quarterly, semi-annually or annually. They may be paid in cash or from re-establishment credit or by deduction from any pension granted under the Pension Act. The policy contracts include a waiver-of-premium disability provision. No extra premiums are charged for residence, travel or occupational hazards.

At the end of the second policy year a liberal cash value is available. It may be used alternatively to provide reduced paid-up insurance or extended term insurance. A veteran's insurance policy is not assignable, nor is a loan value granted.

\* Revised by C. F. Black, Superintendent, Veterans Insurance, Department of Veterans Affairs, Ottawa.

The maximum amount of insurance money that will be paid in a lump sum at death is \$1,000; the balance must be paid to the beneficiary as an annuity certain or as a life annuity with or without a guaranteed period.

**29.—Summary Statistics of Veterans Insurance, Years Ended Mar. 31, 1946-50**

Year Ended Mar. 31—	Insurance Issued during Year		Insurance in Force at end of Year		Death Claims Approved during Year	
	No.	\$	No.	\$	No.	\$
1946.....	4,013	11,971,500	3,914	11,708,550	1	500
1947.....	6,442	18,783,000	10,077	29,658,000	17	55,500
1948.....	8,825	24,599,000	18,433	52,594,612	38	100,500
1949.....	4,615	14,074,500	22,293	63,836,743	91	245,500
1950.....	2,316	7,448,500	23,722	68,016,514	111	340,080

**Provincial Insurance Schemes.**—The Province of Saskatchewan conducts fire, fidelity and surety insurance but not life insurance. This is done under the terms of the Saskatchewan Government Insurance Act, 1944.

In the Province of Alberta, life insurance is provided through the Life Insurance Company of Alberta, a Crown Company that is not an emanation from the Provincial Government. Similarly, another Crown Company, the Alberta General Insurance Company, provides all other kinds of insurance except life, accident and sickness. The Alberta Hail Board provides farmers with insurance for their crops against damage by hail. Information regarding the operations of these Companies may be obtained from:—

- (a) The Superintendent of Insurance,  
Insurance Branch,  
Department of the Provincial Secretary for Saskatchewan,  
Regina, Saskatchewan.
- (b) The Superintendent of Insurance,  
Department of the Provincial Secretary for Alberta,  
Edmonton, Alberta.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

## Section 1.—The Department of National Defence

During the year ended Mar. 31, 1950, the strength of all three branches of the Armed Forces was substantially increased, elements of each were committed for duty according to the United Nations Charter, and the program of organizing and training extensive reserve forces was continued.

Under a single Minister, charged with responsibility for all matters relating to defence, the Department continued a policy which included: (1) the adoption of a unified defence program to meet agreed strategic needs; (2) a single defence budget under which funds and resources would be allocated in accordance with the program; (3) the elimination of duplication of services; (4) consistent and equitable personnel policies; (5) greater emphasis on defence research and closer co-ordination with other government departments and with war industry.

Under direction of the Minister, Service command is exercised by the heads of the Services concerned.

In 1949-50 progress of the new defence organization was primarily along administrative lines, in keeping with an ever-changing international situation. Co-operation with other nations in matters of defence became increasingly effective. In all matters of international defence relations, the first aim of Canadian policy was to prevent war.

The amalgamation of the three Departments and the co-ordination of the three Services began with the establishment of a single National Defence Headquarters at Ottawa. Within this Headquarters, allied components of the Navy, Army and Air Force were interwoven wherever compatible with the interests of efficiency and economy.

Councils and committees that now function with direct relation to the Department of National Defence and the unification program include:—

- (1) **Defence Council.**—*Composition*—Minister of National Defence (Chairman), Parliamentary Assistant, Deputy Minister, Associate Deputy Ministers (two), Service Chiefs of Staff and Chairman of Defence Research Board. *Object*—advising the Minister with regard to administrative matters of inter-Service concern affecting the Department as a whole or otherwise.
- (2) **Chiefs of Staff Committee.**—*Composition*—Service Chiefs of Staff (three), Chairman of Defence Research Board and, when matters of general interest are under consideration, the Deputy Minister, the Under

\* This Chapter, with the exception of the material on the Industrial Defence Board, was revised under the direction of C. M. Drury, C.B.E., D.S.O., Deputy Minister, Department of National Defence, Ottawa

Secretary of State for External Affairs and the Secretary to the Cabinet attend. *Object*—planning, training and general supervision of the three Services; preparation of joint reports appreciating the military situation.

- (3) **Personnel Members Committee.** — *Composition* — Adjutant-General (Army), Chief of Naval Personnel, Air Member for Personnel (R.C.A.F.), Associate Deputy Minister and a Defence Research Board representative (chairmanship rotates among first three members named). *Object*—joint administration of personnel, medical and dental services, pay, pensions and allied matters; general aim is to ensure that, where feasible, personnel of the Navy, Army and Air Force are governed by the same regulations.
- (4) **Principal Supply Officers' Committee.**—*Composition*—principal supply officers from each Service, a Defence Research Board representative and appropriate Associate Deputy Minister (chairmanship rotates among Service members). *Object*—co-ordination and unification of supply and equipment and matters of procurement.
- (5) **Inter-Service Recruiting Committee.** — *Composition* — by Service appointment as required (chairmanship rotates). *Object* — planning campaigns and sustaining recruiting programs for the active and reserve components of the Armed Services.

**The Defence Research Board of Canada.**—The Defence Research Board was set up to operate as a specialized fourth Service to co-ordinate scientific research of defence significance (see p. 1104).

**Civil Defence.**—In October, 1948, the Minister of National Defence appointed a Co-ordinator of Civil Defence with the task of preparing a Canadian plan. Informal discussions were held with the Provincial Governments and the various national organizations and the plans and organizations of the countries of Western Europe and the United States were studied.

An interdepartmental committee has been formed to assist in the co-ordination of the federal planning. The main principle is that all departments and agencies are responsible for planning all phases that are extensions of the normal functions.

At an early stage in his planning the Co-ordinator of Civil Defence became interested in the standardization of fire-fighting equipment and has been instrumental in initiating a standardization program in Canada.

### **Liaison Abroad**

For the purpose of liaison and furtherance of international co-operation on defence, Canada maintains: (1) United States-Canadian Permanent Joint Board on Defence; (2) Canadian Joint Staff (Washington) representing the three Services; (3) Canadian Joint Liaison Officers, London, representing the three Services; and (4) Service Attachés in various countries throughout the world.

## **Section 2.—The Armed Services and the Defence Research Board\***

The three Armed Services of Canada—the Royal Canadian Navy, the Canadian Army and the Royal Canadian Air Force—are closely consolidated under single ministerial direction but still operate as three distinct defence services. Each is headed by a Chief of Staff who is responsible to the Minister of National Defence. Many aspects of administration and training have been amalgamated or co-ordinated in the interests of efficiency and economy.

Terms of service for recruits in each of the Armed Services have been standardized as much as possible. The entire pay structure for comparable ranks has been made uniform. Plans are progressing for standardization of uniforms and equipment wherever feasible. Requirements for recruits and length of enlistment periods vary somewhat in accordance with the demands peculiar to each Service. Generally, educational and physical requirements are the same.

The strengths of the Active (Permanent) components of the Armed Forces as at Dec. 31, 1950, were: Navy 10,199; Army 32,715; and Air Force 18,865.

<sup>1</sup> Excluding (a) marriage allowances for men, \$30 per month, and for officers \$40 per month, subject to reduction of \$10 per month for permanent married quarters or \$2-50 per month for temporary married quarters; (b) trades pay for Group 1 at \$4 per month, for Group 2 at \$12 per month, for Group 3 at \$20 per month and for Group 4 at \$28 per month.

<sup>2</sup> Granted when rations and quarters are not provided.

<sup>3</sup> Granted in lieu of subsistence allowance when married personnel are separated from their families for service reasons.

<sup>4</sup> Paid to sailors, soldiers and airmen serving with Canadian units abroad; naval personnel are paid this allowance when on a sea voyage of 30 days or more; the allowance is not granted to officers.

### Subsection 1.—The Royal Canadian Navy

**Administration.**—The administrative and operational headquarters of the Royal Canadian Navy is located at Naval Headquarters, Ottawa, Ont. The Chief of the Naval Staff is responsible for policy and direction in all matters concerning the Royal Canadian Navy. He is advised by the Naval Board, consisting of five senior officers who are heads of the main branches of naval activity—Staff, Personnel, Plans, Technical Services, and Air.

The Naval Staff, which deals with the organization and operation of the Royal Canadian Navy, is composed of the heads of the various staff directorates—Plans and Operations, Weapons and Tactics, Organization, Air Logistics, Aviation, Communications, Intelligence and Information.

The Navy maintains operational bases and training schools and centres at Halifax, N.S., and Esquimalt, B.C., a new entry training establishment at Cornwallis, N.S., and an establishment at St. John's, Nfld. In command of all ships and establishments in these areas are the Flag Officer Atlantic Coast and the Flag Officer Pacific Coast, respectively.

External representation includes the Naval Member of the Canadian Joint Staff, Washington, D.C., U.S.A., and the Naval Member of the Canadian Joint Staff, London, England.

**The Fleet.**—Though reduced from the 378 warships served by more than 90,000 men in the spring of 1945, the Royal Canadian Navy at present controls a fleet far superior to anything previously maintained by Canada in peacetime. The Navy has been developed into a specialized anti-submarine navy and has concentrated its training on this type of warfare. In addition, ships and aircraft have been armed and equipped for anti-submarine operations and a number of fast, Canadian designed, anti-submarine vessels have been ordered in Canadian shipyards.

While specializing in this particular role, the Royal Canadian Navy has not ignored other phases of naval warfare. Ships and men have been trained to perform diverse duties and, in the case of the three Canadian destroyers serving in the Korean theatre, have demonstrated a high efficiency. The three ships—H.M.C.S. *Cayuga*, H.M.C.S. *Sioux* and H.M.C.S. *Athabaskan*—have been called on to carry out a wide variety of assignments.

The keynote is intense training, with particular emphasis on training afloat. Ships have put in a notable amount of sea time, from the summer local cruises, designed for the instruction of reserves with only two weeks to spend on the water, to far-flung movements combined with fleet exercises with ships of the Royal Navy and the United States Navy.

Early in 1950 a division between operation and training ships was announced. Operational ships and carrier-borne aircraft are being welded into a specialized anti-submarine force and are to be developed to the highest possible standard of efficiency. Training ships will be employed exclusively in providing sea experience for new entries, reserve personnel and Naval Cadets, and in furnishing the practical training necessary to supplement that received ashore by men taking courses in specialized subjects.

The largest unit of the peacetime Royal Canadian Navy is a light fleet aircraft carrier of 18,000 tons. Two 8,000-ton six-inch gun cruisers, seven large 'Tribal' class destroyers and four lighter destroyers make up the main portion of the fleet.

Five frigates and nine 'Algerine' type minesweepers also are maintained, as well as auxiliary vessels and 'Fairmile' motor launches. The following ships are currently in commission or are being retained in reserve:—

Light Fleet Aircraft Carrier —  
H.M.C.S. *Magnificent*

Cruisers—  
H.M.C.S. *Ontario*  
H.M.C.S. *Uganda*

Tribal Class Destroyers—  
H.M.C.S. *Iroquois*  
H.M.C.S. *Huron*  
H.M.C.S. *Haida*  
H.M.C.S. *Micmac*  
H.M.C.S. *Nootka*  
H.M.C.S. *Cayuga*  
H.M.C.S. *Athabaskan*

Fleet "V" Class Destroyers—  
H.M.C.S. *Sioux*  
H.M.C.S. *Algonquin*

Crescent Class Destroyers—  
H.M.C.S. *Crescent*  
H.M.C.S. *Crusader*

Frigates—  
H.M.C.S. *Antigonish*  
H.M.C.S. *Swansea*  
H.M.C.S. *La Hulioise*  
H.M.C.S. *Beacon Hill*  
H.M.C.S. *New Waterford*

Algerine Type Minesweepers—  
H.M.C.S. *New Liskeard*  
H.M.C.S. *Portage*  
H.M.C.S. *Wallaceburg*  
H.M.C.S. *Fort Francis*  
H.M.C.S. *Kapuskasing*  
H.M.C.S. *Rockcliffe*  
H.M.C.S. *Oshawa*  
H.M.C.S. *Sault Ste. Marie*  
H.M.C.S. *Winnipeg*

Auxiliary Vessels—  
H.M.C.S. *Lloyd George*  
H.M.C.S. *Revelstoke*  
H.M.C.S. *Cedarwood*  
H.M.C.S. *Llewellyn*

Motor Launches—  
H.M.C. *PTC 716*  
H.M.C. *PTC 721*  
H.M.C. *PTC 706*  
H.M.C. *PTC 724*  
H.M.C. *PTC 711*  
H.M.C. *PTC 762*  
H.M.C. *PTC 779*

The aircraft carrier, H.M.C.S. *Magnificent*, is of the 'Colossus' class, with a flight deck 700 feet long and a speed of 25 knots. Though Belfast-built, she has a number of Canadian innovations including a system of cafeteria messing for feeding her crew of more than 1,000. Sea Fury single-seater fighters and Firefly and Avenger anti-submarine aircraft make up her air component. The Sea Furies are among the fastest propellor-driven aircraft in the world, while the Fireflies and Avengers are specially equipped for anti-submarine duties.

H.M.C.S. *Shearwater*, commissioned in December, 1948, at Dartmouth, N.S., is the shore base for the 18th and 19th Carrier Air Groups, the Training Air Group, Fleet Requirement Unit and schools for air branch personnel. Formerly administered by the Royal Canadian Air Force, *Shearwater* was turned over to the Royal Canadian Navy just prior to commissioning.

The two cruisers are 500 feet long, mount nine six-inch guns and heavy anti-aircraft armament. They carry crews of nearly 800 each and have a speed of more than 30 knots. H.M.C.S. *Ontario*, completed in 1945, has since been completely refitted and is one of the best-equipped ships of her class.

The 'Tribals' are of about 2,000 tons, and are the most heavily-armed vessels of their type. Three of them, British-built, saw much action in the closing years of the Second World War. These are, in order of completion, H.M.C.S. *Iroquois*, H.M.C.S. *Huron* and H.M.C.S. *Haida*. The remaining four are products of Canadian shipyards and are the first turbine warships built in Canada.

H.M.C.S. *Crescent* and H.M.C.S. *Crusader* are smaller destroyers than the 'Tribals', displacing 1,700 tons. H.M.C.S. *Algonquin* and H.M.C.S. *Sioux* are Canadian Fleet 'V' class destroyers. They displace 1,700 tons and, while

comparatively new ships, have battle records to their credit. The frigates and 'Algerine' minesweepers, war-developed as anti-submarine escort vessels, displace 1,445 and 1,000 tons, respectively.

In H.M.C.S. *Sioux*, extensive and radical alterations have been made to the crew's living quarters on a trial basis. A cafeteria messing system and dining quarters separate from the sleeping accommodation have been introduced, while in the sleeping spaces hammocks have been replaced by bunks which will fold when not in use. Although the cafeteria and bunk systems are not uncommon in larger ships, this is the first time they have been employed *in toto* in a destroyer of either the Canadian or British Navies.

In 1949 the Royal Canadian Navy embarked on the largest ship-building program in its peacetime history. Contracts were awarded for a modern icebreaker, three anti-submarine escort vessels of latest design, four coastal minesweepers and a gate vessel. In August, 1950, it was announced that this program would be accelerated and expanded.

**Training.**—While specialized training for both officers and men prior to the War was almost entirely dependent on Royal Navy facilities, the development and modernization of the Halifax and Esquimalt bases, plus the facilities made available by the increased Canadian fleet, have brought the Royal Canadian Navy to a position where, with the exception of a very few highly specialized qualifications, it handles all its own instructional activity.

H.M.C.S. "Cornwallis", at Cornwallis, N.S., the largest training base in the Commonwealth during the War, was recommissioned May 1, 1949, to handle the basic instruction of all Permanent Force new entries.

During 1950 the complement of the Royal Canadian Navy was raised to 13,440 officers and men. Recruits, on enlistment, sign a five-year agreement, with succeeding periods of the same length where a man wishes to continue until he is pensionable.

Officers of the Royal Canadian Navy come from three main sources: (1) the Canadian Services College, Royal Roads, B.C., and the Canadian Services College, Royal Military College, Kingston, Ont.; (2) direct entry of certain specialists from the universities; (3) promotion from the ranks. In addition, a number of short-term commissions are held by naval air crew personnel.

**Operations.**—More important operational commitment carried out by the Royal Canadian Navy up to mid-1950 was the support by three destroyers of United Nations forces engaged in the defence of South Korea. The Tribal destroyers, H.M.C.S. *Cayuga* and H.M.C.S. *Athabaskan*, and the Fleet 'V' class destroyer H.M.C.S. *Sioux* left their Esquimalt base in July and subsequently took part in landing operations, bombardments, convoy escort work and other duties in the Korean theatre.

H.M.C.S. *New Liskeard*, an 'Algerine' minesweeper based at Halifax, joined with units of the United States Navy and Coast Guard to carry out a large-scale survey of the Gulf Stream. H.M.C.S. *Cedarwood*, an auxiliary vessel based at Esquimalt, continued her oceanographic duties on the Pacific Coast.

**Royal Canadian Navy (Reserve).**—All Canadian Naval Reserves are incorporated in a single body, the Royal Canadian Navy (Reserve). Twenty-one Naval Divisions are established in the following centres:—

Halifax, N.S., H.M.C.S. "Scotian"

Charlottetown, P.E.I., H.M.C.S.

"Queen Charlotte"

Saint John, N.B., H.M.C.S.

"Brunswick"

Quebec, Que., H.M.C.S. "Montcalm"

Montreal, Que., H.M.C.S. "Donnacona"

Ottawa, Ont., H.M.C.S. "Carleton"

Toronto, Ont., H.M.C.S. "York"

Kingston, Ont., H.M.C.S. "Cataragui"

Hamilton, Ont., H.M.C.S. "Star"

Windsor, Ont., H.M.C.S. "Hunter"

London, Ont., H.M.C.S. "Prevost"

Port Arthur, Ont., H.M.C.S. "Griffon"

Winnipeg, Man., H.M.C.S. "Chippawa"

Regina, Sask., H.M.C.S. "Queen"

Saskatoon, Sask., H.M.C.S. "Unicorn"

Calgary, Alta., H.M.C.S. "Tecumseh"

Edmonton, Alta., H.M.C.S. "Nonsuch"

Vancouver, B.C., H.M.C.S. "Discovery"

Victoria, B.C., H.M.C.S. "Malahat"

Prince Rupert, B.C., H.M.C.S.

"Chatham"

St. John's, Nfld., H.M.C.S. "Cabot"

These Naval Divisions are not only the local training centres for reserves, but are recruiting offices for the Royal Canadian Navy. Drawing heavily on surplus war equipment for basic training gear, and making use in many instances of new buildings, the Divisions are well fitted to meet modern high instructional standards. Each has been allocated responsibility for specialized training in various phases of naval activity—gunnery, harbour defence, aviation, communications, etc.—and Royal Canadian Navy officers and men have been provided as instructors. Each Division is commanded by a R.C.N. (R) Active List officer, under whom is a Royal Canadian Navy staff officer.

Apart from annual training, officers and men of the R.C.N. (R) may perform voluntary service and special naval duty as required by Naval Headquarters. In the latter case they take the places of Permanent Force officers and men where vacancies exist in complement.

There are two types of enlistment in the R.C.N. (R). Officers may be on either the Active List or the Retired List. Those on the former must take periodic training, but retired officers may volunteer for training if they so desire. Both classes are liable to mobilization in a time of emergency.

Men are placed on Active or Emergency Lists and are governed by the same conditions as apply to officers. They sign on for five-year periods.

**University Naval Training Divisions.**—Divisions for naval training are established at 32 universities and colleges across Canada: Prince of Wales College, St. Dunstan's College, Acadia University, Dalhousie University, Nova Scotia Technical College, St. Francis Xavier University, University of King's College, University of St. Mary's College, Mount Allison University, University of New Brunswick, Collège Saint-Alexandre de la Gatineau, École Polytechnique, Laval University, McGill University, Sir George Williams College, University of Montreal, Assumption College, Carleton College, McMaster University, Ontario Agricultural College, Ottawa University, Queen's University, St. Patrick's College, University of Toronto, University of Western Ontario, Lakehead Technical Institute, University of Manitoba, University of Saskatchewan, Regina College, University of Alberta, University of British Columbia and Victoria College.

The University Naval Training Divisions program offers undergraduates of all faculties four years of instruction leading to a commission in the Royal Canadian Navy and the Royal Canadian Navy (Reserve). It is designed to produce officers in all branches and, to this end, offers training both ashore and afloat.

Training is taken at Naval Divisions and at universities during the academic year. Summer vacation training is taken both in the schools at the coasts and in H.M.C. ships.

**The Royal Canadian Sea Cadets.**—The Royal Canadian Sea Cadets consists of 80 authorized corps, sponsored by the Navy League of Canada and trained and supervised by the Royal Canadian Navy. The authorized strength is 10,000 cadets between the ages of 14 and 18 years. During a period of two summer months, at five different camps maintained for their training, 4,000 cadets averaged 14 days each.

### Subsection 2.—The Canadian Army

**Command.**—The system of command of the present peacetime Canadian Army includes:—

*Army Headquarters*—Ottawa, Ont. (subdivided)

The General Staff Branch.

The Adjutant-General Branch.

The Quartermaster-General Branch.\*

*Western Command*—Headquarters, Edmonton, Alta.

British Columbia Area—Headquarters, Vancouver, B.C.

*Prairie Command*—Headquarters, Winnipeg, Man.

Saskatchewan Area—Headquarters, Regina, Sask.

*Central Command*—Headquarters, Oakville, Ont.

Western Ontario Area—Headquarters, London, Ont.

Eastern Ontario Area—Headquarters, Kingston, Ont.

*Quebec Command*—Headquarters, Montreal, Que.

Eastern Quebec Area—Headquarters, Quebec City, Que.

*Eastern Command*—Headquarters, Halifax, N S.

New Brunswick Area—Headquarters, Fredericton, N.B.

Newfoundland Area—Headquarters, St. John's, N'f'ld.

*Northwest Highway System*—Headquarters, Whitehorse, Yukon.

*Canadian Army Liaison Staff*—Washington, D.C., U.S.A.

*Canadian Army Liaison Establishment*—London, England.

Army Headquarters conducts the planning and policy for the administration and training of the Active and Reserve Forces of the Canadian Army. It administers corps schools and other training establishments. Matters affecting Public Relations, Cadet Services, Military Intelligence, Chaplain Services, Provost and associated activities are directed by Army Headquarters through Commands.

The five principal Commands are charged with complete military responsibility, under Army Headquarters, for all matters affecting their territorial areas and the command and administration of all troops within those areas.

\* Includes the Branch of the Master-General of Ordnance.

**Organization.**—There is but one Canadian Army which includes all the ground forces of Canada. Service is on a voluntary basis. The organization of the Army provides for six component parts as follows:—

*The Active Force.*—The Active Force is available for general service and comprises a field force, coast and anti-aircraft defence units, headquarters, command and area staffs; also training, intercommunication, administration, research and development staffs, units and establishments, officers and men permanently employed but not borne on any regimental establishment.

The conditions for enlistment in the Active Force provide for men who were on Active Service in the Army during the Second World War, if they meet the physical requirements, have a Grade VIII education or the equivalent and are between 18 and 40 years of age. Young men are preferred. Men who were not on Active Service during the War may enlist if they meet the physical requirements, have a Grade X education or the equivalent and are between 18 and 25 years of age. Men qualified in a particular trade may be accepted up to the age of 35 years.

Officers of the Canadian Army come from three main sources: (1) Canadian Officers Training Corps; (2) graduates of the Canadian Services Colleges—Royal Roads at Esquimalt, B.C., and the Royal Military College at Kingston, Ont.; (3) promotions from the ranks.

*The Canadian Army Special Force.*—This Force has been formed, within the Active Force, to meet Canada's commitments as a member of the United Nations. The Force is comprised of a self-contained formation of all arms and services, together with the necessary reinforcements. The Special Force was formed in August, 1950, by recruitment of personnel from civilian life and with a number of personnel from the existing Active Force.

*The Reserve Force.*—The Reserve Force provides the basis for the organization of a field force in the event of emergency. It is employed on a part-time basis and is subject to annual military training.

*The Supplementary Reserve.*—The Supplementary Reserve maintains lists of units and a list of individuals required in the event of mobilization to complete the organization of the Army. Such personnel will not be subject to, yet not precluded from, annual military training.

*The Canadian Officers Training Corps.*—The C.O.T.C. is responsible for training officer candidates during peace and war; personnel are subject to the same obligations in respect of military service as apply to other sections of the Army.

*The Cadet Services of Canada.*—Cadet Services are administered by commissioned officers of the Canadian Army, serving on a basis comparable to that of officers of the Reserve Force. These officers also handle cadet training and are under direction of Active Force general staff officers at Command Headquarters. The regulations authorize a total of 50,000\* army cadets across Canada and there are approximately 490 separate cadet corps functioning. All service is voluntary. Free uniforms are provided and summer camps are operated for the cadets in each of the five military Commands.

*The Reserve Militia.*—The Reserve Militia provides for units for home security duties which could not logically be performed by the Reserve Force. Most prominent of militia units is the corps of Canadian Rangers, organized in June, 1947.

\* This was raised to 65,000 about the middle of March, 1951.

The role of Canadian Rangers includes the provision of guides to organized troops, coast watching, rescue work in remote localities, assistance to civilian law-enforcement agencies and immediate local defence in times of emergency. Authorized strength of the organization is 5,000. Terms of service are somewhat similar to those for the Reserve Force, though there are no uniforms provided in times of peace nor any training parades. Service duties as Rangers parallel generally the civilian pursuits of members.

Additional to, but not integral parts of, the Canadian Army are: (1) officially authorized rifle associations and clubs; (2) such training centres as may be authorized from time to time by the Minister.

**Training.**—Actual training of Active and Reserve Force personnel is under General Officers Commanding the five Commands as directed by the appropriate branch of Army Headquarters.

Basic and advanced training for recruits, as well as refresher courses for all ranks, is conducted in Army Corps Schools organized on a permanent peacetime basis and located as follows:—

Royal Canadian Armoured Corps School, Camp Borden, Ont.  
Royal Canadian School of Artillery, Camp Shilo, Man.  
Royal Canadian School of Artillery (Anti-Aircraft), Picton, Ont.  
Royal Canadian School of Artillery (Coast and Anti-Aircraft), Esquimalt, B.C.  
Royal Canadian School of Military Engineering, Chilliwack, B.C.  
Royal Canadian School of Signals, Barriefield, Ont.  
Royal Canadian School of Infantry, Camp Borden, Ont.  
Royal Canadian Army Service Corps School, Camp Borden, Ont.  
Royal Canadian Army Medical Corps School, Camp Borden, Ont.  
Royal Canadian Army Dental Corps School, Ottawa, Ont.  
Royal Canadian Ordnance Corps School, Montreal, Que.  
Royal Canadian Electrical and Mechanical Engineers School, Barriefield, Ont.  
Canadian Provost Corps School, Camp Borden, Ont.

### Subsection 3.—The Royal Canadian Air Force

**Organization.**—The Royal Canadian Air Force is administered from Air Force Headquarters, Ottawa, Ont., and is divided into the following commands:—

- (a) Training Command with headquarters at Trenton, Ont.
- (b) North West Air Command with headquarters at Edmonton, Alta.
- (c) Air Transport Command with headquarters at Rockcliffe, Ont.
- (d) Air Materiel Command with headquarters at Ottawa, Ont.

Training Command is responsible generally for air and ground crew training in the R.C.A.F. North West Air Command has under its jurisdiction two subordinate groups; Tactical Group with headquarters at Winnipeg, and 12 Group, with headquarters at Vancouver.

Two other groups—Air Defence Group with headquarters at St. Hubert, Que., and Maritime Group with headquarters at Halifax, N.S.—are responsible directly to Air Force Headquarters.

Air Attachés are maintained in the United States, Yugoslavia, Czechoslovakia, France, Sweden, Belgium, Russia and Argentina. In addition the R.C.A.F. is represented in the United Kingdom by the Air Member of the Canadian Joint Staff at London, and in the United States by the Air Member of the Canadian Joint Staff at Washington.

**Operations.**—The Royal Canadian Air Force was, as 1950 closed, in the midst of an expansion campaign to boost its fighter strength to "more than" five squadrons and generally build up the operational element of the Force. Production orders for Canadian-built CF-100 'Canucks' and for F-86 'Sabres' have been speeded up and all regular force fighter squadrons will be equipped with these top-ranking jet aircraft. As an interim measure, propellor-driven 'Mustang' fighters purchased from the United States will be flown by some squadrons.

The build-up of the Air Force is not strictly confined to fighter squadrons. It is the role of the Navy and Air Force to defend the thousands of miles of coast line around Canada and to keep open the sea lines of communication. To meet this commitment the R.C.A.F. will operate maritime squadrons.

But it is in the field of fighter activities that the most important advances are being made. In addition to the jet aircraft, radar facilities are being expanded to warn of the approach of enemy aircraft.

Canada's new jet-equipped squadrons will undoubtedly rate with the world's best. The Canadian-designed and built 'Canuck', an all-weather fighter, carries two crew members, a pilot and a radio-navigator. The aircraft combines very high speed with long range.

The prototype model was fitted with two Rolls Royce 'Avon' engines, but the 'Canuck' will eventually be powered by the Canadian 'Orenda' jet engine.

The 'Sabre' is a United States aircraft now being built at Montreal. It holds the world speed record. Without the range of the 'Canuck' but boasting many other valuable characteristics, the 'Sabre' is an ideal running mate for the Canadian-designed aircraft.

R.C.A.F. regular and auxiliary fighter squadrons have been using the British DeHavilland Vampire III as their operational aircraft, but present Air Force policy is aimed at standardizing equipment as much as possible with the United States Air Force, our close ally in the air defence of the North American Continent.

*Contribution to the United Nations Airlift.*—In the transport field, the R.C.A.F. began in July, 1950, a substantial contribution to the United Nations airlift in support of the Korean campaign. A squadron of four-engined 'North Stars' was placed on shuttle runs back and forth between McChord Field, near Tacoma, Washington, and Tokyo, carrying vital war cargo for the United Nations forces in Korea.

*Transports.*—The R.C.A.F. Air Transport Command operates a substantial airline supplying isolated Arctic bases and carrying out other necessary internal communications flights.

In 1950 the Air Force completed the major portion of its long campaign to photograph the uncharted Canadian northland. Three squadrons, two doing actual aerial photography and the other supplying the photo flyers, were engaged in the work all summer in Lancaster, Dakota, Canso and Norseman aircraft.

Under the International Civil Aviation Organization (ICAO) agreement, the R.C.A.F. is responsible for co-ordinating Canada's commitment for search and rescue operations. A smooth-working plan of action has been worked out with the Navy, R.C.M.P. and other agencies involved. With rescue centers at key points across Canada, the organization can be swung into action on a moment's notice.

Mercy flights are an allied field that call for thousands of flying hours by the Air Force every year. A week seldom goes by without at least one call on the R.C.A.F. to pick up a sick Eskimo child or injured trapper. Besides the humanitarian aspect, mercy flights provide good training for service pilots in flying in the difficult Canadian bush country.

**Enlistment.**—The R.C.A.F. offers enlistment to skilled or unskilled men. Veterans who were on Active Service may enlist if they meet the physical requirements and are under the age of 30 plus their number of years on Active Service. Applicants who were not on Active Service may be accepted if they meet the physical requirements, are unmarried, and are over 17 but not over 29 years of age. Applicants under 18 years of age must have the written consent of parent or guardian. Educational requirements for ground crew vary according to individual trades.

**Commissions.**—Graduation from either of the Canadian Services Colleges (Royal Military College, Kingston, Ont., or Royal Roads, near Victoria, B.C.) qualifies young men for acceptance in the R.C.A.F. as officers. Technical officer positions are granted to selected university graduates, and are open to qualified serving airmen. Six-year short-service commissions are available to qualified high-school graduates and selected serving airmen.

**Training.**—The Royal Canadian Air Force Staff College at Armour Heights, Toronto, Ont., trains officers for command and staff positions. At the Institute of Aviation Medicine, Toronto, there are facilities for consultant and specialist officers, laboratories for nutritional research, a human centrifuge, a cold low-pressure chamber, a tropical room, a statistical section, and well-equipped laboratories for the study of all branches of aviation medicine.

Ground training establishments for airmen are located in Ontario at Trenton, Aylmer, Camp Borden, Rockcliffe and Clinton. In addition, specialist training units such as the School of Survival, which operates at Fort Nelson in northern British Columbia and at Cambridge Bay in the Arctic, and the Para-Rescue School near Jasper, Alta., were in operation during 1950.

Basic flying training was given during 1950 at Centralia and Trenton, Ont., and Summerside, P.E.I. In addition to training its own aircrew, the R.C.A.F. in 1950 began training aircrew from France, Italy, Belgium, the Netherlands and Norway. It was also announced that pilots and navigators from the R.A.F. were to be trained in Canada by the R.C.A.F. Shortly before the close of the year a second basic training school was opened at Gimli, Man.

During 1950 the R.C.A.F. carried out the largest reserve summer training program in its history. Reserve personnel from the auxiliary squadrons and from reserve ground units attended summer camp for two-week periods. In addition, hundreds of university undergraduates spent varying periods at Air Force stations, taking either formal or contact training. A considerable number of high-school youths also attended camp with the auxiliary squadrons, under a new reserve scheme.

Refresher flying training for selected wartime pilot veterans also was to begin under the general reserve training program. Under this scheme, up to 600 wartime veterans are to be given refresher flying training annually. Aircraft and funds will be provided by the R.C.A.F., and actual training handled by flying clubs across Canada. The purpose of the plan is to maintain a pool of trained pilots able to serve as flying instructors or staff pilots in event of war.

**Air Force Day.**—Air Force Day, instituted in 1947, the annual “open house” of the R.C.A.F., falls on the first or second Saturday in June. Its purpose is to give the Canadian public an opportunity to see the equipment and personnel of the Air Force at first hand.

**Royal Canadian Air Cadets.**—Closely associated with the R.C.A.F. are the Royal Canadian Air Cadets, whose establishment was raised during 1950 from 15,000 to 22,500. More than 200 air cadets squadrons are located across Canada, administered by the Air Cadet League of Canada, a voluntary civil organization. The squadrons are headed by Air Cadet officers who serve on a basis comparable to that of R.C.A.F. Reserve officers. Training assistance is given by the R.C.A.F., which also provides uniforms and equipment. The Air Cadet movement offers citizenship and aviation training to boys between the ages of 14 and 18 years.

#### **Subsection 4.—The Defence Research Board**

The Department of National Defence Act was amended on Apr. 1, 1947, to provide for the establishment of a Defence Research Board. The Board consists of six ex officio and six appointed members serving under a full-time chairman. The ex officio members are the Chairman of the Board, the Chiefs of Staff of the three Armed Services, the President of the National Research Council and the Deputy Minister of National Defence. The remaining six members are appointed by the Governor General in Council and are members with scientific and technical qualifications drawn from the universities and industry. The organization consists of a headquarters staff, advisory committees and field research stations.

The Defence Research Board is an essential part of the defence of Canada and, as such, has been described as a fourth Service. Its fundamental purpose is to correlate the special scientific requirements of the Armed Forces with the general research activities of the scientific community at large. This task is the main function of the Headquarters Staff. Its work is strengthened by the expert counsel of comprehensive advisory committees.

In order to avoid unnecessary duplication of research facilities, the research stations of the Board deal only with those problems that are peculiar to national defence. In other fields, such as electronics and aeronautics, which touch upon related civilian researches, it collaborates with existing research laboratories, especially those of the National Research Council.

In all its work, the Board gives priority to problems in which Canada has special interest or for which national facilities are specially suited. Experience has already shown that well-directed defence research produces results that are of value, both direct and indirect, to the civilian economy.

It was, for example, revealed in 1947 that, as a result of wartime research into defensive measures against possible bacteriological warfare, Canadian scientists in collaboration with United States colleagues produced a vaccine to immunize cattle against the highly destructive rinderpest disease. The results of this research have been given freely to the world.

In planning this organization, the Government considered the vital need for continuity in research and planned the Defence Research Board as a fully integrated and permanent part of the defences of the country. To assist co-ordination at the highest level, the Chairman of the Board has the status of a Chief of Staff and is a member of the Chiefs of Staff Committee and of the Defence Council.

### Section 3.—Service Training

Co-ordination of service training in all its stages is carried out in Services Colleges and Staff Colleges. Services Colleges are cadet institutions qualifying graduates for commissions in the Permanent Forces and accept applicants for any of the Services. National Defence and Staff Colleges are more specialized but operate jointly to a great degree. A short description of each Canadian Service College and Advanced Training College is given at pp. 1138-39 of the 1948-49 Year Book.

### Section 4.—The Industrial Defence Board\*

The Industrial Defence Board was established by Order in Council in April, 1948, under the Department of National Defence. In March, 1949, it was transferred to the Department of Trade and Commerce, the Government agency chiefly concerned with matters of industrial preparedness.

The Board is an advisory agency composed of industrialists and government departmental representatives. The chief functions of the Board are to advise the Government of Canada, through the Minister of Trade and Commerce, on such matters as: (1) the industrial war potential of Canada; (2) plans for industrial production in the event of war; (3) liaison among the Canadian Armed Forces, the Canadian Industrial Preparedness Association, Canadian Arsenals, Limited, and other Government agencies and industries concerned with industrial preparedness; (4) standardization of specifications and industrial practices; (5) the location of industries; (6) the development, procurement, inspection, storage and distribution of material and equipment; and (7) the maintenance of reserve stocks.

The Board is composed of: a Chairman and Vice-Chairman, chosen from industry; five additional representatives from industry; the Deputy Minister of Trade and Commerce; the Deputy Minister of National Defence; the Deputy Minister of Labour; the three Principal Supply Officers of the Armed Forces; the President of Canadian Arsenals, Limited; and the Chairman of the Defence Research Board.

---

## CHAPTER XXVIII.—VETERANS AFFAIRS\*

### CONSPECTUS

	PAGE		PAGE
SECTION 1. THE DEPARTMENT OF VETERANS AFFAIRS.....	1106	SECTION 3. POST-DISCHARGE TREATMENT AND FACILITIES.....	1108
SECTION 2. DISCHARGE GRATUITIES AND RE-ESTABLISHMENT CREDITS.....	1107	SECTION 4. REHABILITATION OF VETERANS	1110
		SECTION 5. WAR DISABILITY PENSIONS...	1117

NOTE.—*The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.*

The basis of administration of the Department of Veterans Affairs, established in October, 1944, is dealt with in the 1946 edition of the Year Book at pp. 1053-1054. The work of the Department as it has developed year by year is outlined in subsequent editions and is brought up to Mar. 31, 1950, in the present volume.

### Section 1.—The Department of Veterans Affairs

The work of the Department of Veterans Affairs during the fiscal year 1949-50 settled down into what will probably be a permanent pattern, with medical treatment, payment of pensions and allowances, welfare work, and land settlement its major functions.

During the year work under post-war rehabilitation legislation continued to diminish, university training being the most important continuing activity in this field. That decline was largely counterbalanced by activity in the welfare field, with a great deal of work being done for the older veterans and those with disabilities. Of major importance to veterans in these two classes was the provision in 1949 of an Assistance Fund under which veterans in receipt of War Veterans Allowance might have the allowance supplemented if actual need existed. During the year a widespread survey was made in this field to determine the need which resulted in an increase in the number of veterans receiving war disability pensions, and those under War Veterans Allowance. This provided an additional patient load in the 28 hospitals and treatment institutions maintained by the Department. Other institutions were held under contract where departmental facilities were not available.

During the year, interest in settlement under the Veterans' Land Act continued high, and assistance under the Act was given to veterans in the building of homes at prices they could afford. Classes in home construction were held across Canada under the auspices of the Veterans' Land Act with the result that many veterans did a great deal of the construction work themselves.

The Department maintains 18 District Offices and 2 Sub-District Offices in Canada together with a District Office at London, England. The administration of the Veterans' Land Act also requires the maintenance of District and Regional

\* Material for this Chapter has been contributed by the various Branches of the Department of Veterans Affairs through E. B. Reid, Director of Public Relations of Veterans Affairs.

Offices in locations as accessible as possible to the veterans. Travelling welfare officers operating from these offices assist veterans to take advantage of those rights and privileges made available to them through the Department.

## Section 2.—Discharge Gratuities and Re-establishment Credits

The amount expended as gratuities under the War Service Grants Act continued to show a decrease during the year ended Mar. 31, 1950.

### 1.—Gratuity Payments under the War Service Grants Act, Years Ended Mar. 31, 1945-50

<sup>1</sup> January, February and March only.  
from 1946 to 1948.

<sup>2</sup> This credit is the result of a bookkeeping adjustment

**Re-establishment Credits.**—During the fiscal year 1949-50 the amount of re-establishment credit authorized for use was slightly over \$22,000,000 or approximately three-fifths of that authorized during 1948-49.

To Mar. 31, 1950, 959,909 veterans' re-establishment credit accounts had been opened and 636,465 of these accounts had been closed due to authorization having been given for the complete disposal of the credit. In addition to the \$252,386,462 authorized for use for the purposes listed in Table 2, about \$58,800,000 was written off for veterans who had used the alternative benefit of training, or had made application to settle under the Veterans' Land Act. Of the total re-establishment credit issued to Mar. 31, 1950, more than 82 p.c. was used for homes.

The expenditures made to Mar. 31, 1950, resulted from 1,715,902 individual approved applications for use of the credit.

### Section 3.—Post-Discharge Treatment and Facilities

**General Policy.**—The general policy regarding post-discharge treatment services has continued. Wherever departmental hospitals are situated in proximity to medical schools, there exists close co-operation with the university. Veterans hospitals are actively engaged in undergraduate and post-graduate teaching. Members of the medical faculties are also employed by the Department of Veterans Affairs with specialists in veterans hospitals. As at Mar. 31, 1950, 198 resident interns and staff were employed in departmental hospitals. Ten hospitals have received approval by the Royal College of Physicians and Surgeons of Canada for advanced post-graduate teaching in Internal Medicine and General Surgery. Of these, six are, in addition, approved for advanced post-graduate teaching in specialties.

The majority of the consultant staffs at departmental hospitals are employed on a part-time basis and are, also, generally engaged in medical teaching. By adherence to this principle, the veteran is assured of the best in medical treatment. The resident staff and interns receive excellent training.

The professional and other members of the university staffs are employed as consultants and advisors to the Department of Veterans Affairs by a method similar to that in effect for medical consultants. Nineteen university college members were so employed during 1949-50. The Department thus has available expert advice in nursing, pathology, medical social services and other medical sciences.

Special centres for the investigation and treatment of arthritis, paraplegia, tuberculosis, etc., have continued active in the larger hospitals. Where Departmental facilities are not available, veterans with service-related disabilities receive treatment and hospitalization through the doctor of their choice.

Clinical research has always been carried out by individual doctors in the Department, but such activity has been limited due to lack of funds. Authority was obtained in 1949-50 for funds for a permanent program of medical research and education. The program will be administered by a Special Advisory Board composed of outstanding members of the profession with a permanent secretary. The Board will work in close association with the National Research Council, Defence Research Board and the Department of National Health and Welfare. All research projects will be submitted first to the Advisory Board and then referred to the appropriate agency. There will thus be complete control of projects and expenditures. The program will be commenced early in the fiscal year 1950-51.

As at Mar. 31, 1950, the Department had in operation 9,895 beds in 28 institutions. Of these, 12 were General Treatment Hospitals, 7 Health and Occupational Centres for convalescents, 3 Special Institutions and 7 Veterans Homes. The present building program of the Department is concerned mainly with the replacement of obsolescent equipment with modern accommodation.

Statistics relative to the Treatment Service activities will be found in the Chapter on Health and Welfare, pp. 224-225.

**Dental Services.**—Applications for post-discharge dental treatment, which up to Mar. 31, 1949, amounted to 663,414, numbered only 178 during the year ended Mar. 31, 1950.

<u>Year Ended Mar. 31—</u>	<u>Treatments</u>	<u>Year Ended Mar. 31—</u>	<u>Treatments</u>

1945.....	249,170	1950.....	158,149

**Prostheses and Surgical Appliances.**—The Prosthetic Services Branch of the Department of Veterans Affairs, established in August, 1916, has, as its first responsibility, the provision of prostheses and orthopaedic appliances to veterans and other persons entitled to such supply under Order in Council P.C. 2048 as amended. Appliances are supplied upon request to Provincial Workmen's Compensation Boards, Canadian National Railways, Department of National Defence, Department of National Health and Welfare and others.

The organization consists of a main manufacturing and fitting centre at Toronto, and 11 district centres established in the major Canadian cities, equipped with facilities for measuring, fitting, adjusting and maintaining artificial limbs, orthopaedic boots, splints, braces, artificial eyes and other appliances. Minor orthopaedic appliances such as trusses, glasses, hearing aids, elastic hosiery, etc., are supplied through purchase from private manufacturers.

The main prosthetic establishment at Sunnybrook Hospital, Toronto, is equal to the standard of any existing similar institution. It includes a special section organized for research and development of prosthetic and orthopaedic appliances where several appliances and improvements have been developed and put into production. Present projects include various improvements in design and construction of several types of artificial arms and legs together with their components and suspensions. The recently improved suction socket prosthesis for above-knee amputation is now available as a regular issue.

The Branch is represented on the Associate Committee on Artificial Limbs, N.R.C. (Canada), the Advisory Committee on Artificial Limbs, N.R.C. (United States) and maintains close liaison with the Standing Advisory Committee of the British Ministry of Pensions.

The number of persons supplied with appliances during the year ended Mar. 31, 1950, was 58,622 as compared with 47,007 during the previous fiscal year. Appliances supplied since Apr. 1, 1941, are as follows:—

<i>Year Ended Mar. 31—</i>	<i>Total Production Jobs</i>	<i>Stock and Purchases</i>	<i>Total Issues</i>	<i>Year Ended Mar. 31—</i>	<i>Total Production Jobs</i>	<i>Stock and Purchases</i>	<i>Total Issues</i>

1945.....	27,472	27,423	54,895	1950.....	32,007	64,944	96,951

The Branch also operates workshops for the employment of disabled veterans in the production of poppies and wreaths for sale by the Canadian Legion on Remembrance Day. About fifty to seventy veterans are constantly employed. The wages during the year ended Mar. 31, 1950, amounted to \$112,919.

### Section 4.—Rehabilitation of Veterans

The Veterans Welfare Services Branch of the Department of Veterans Affairs is responsible for the efficient administration of benefits available to discharged members of the Forces under the terms of the Veterans' Rehabilitation Act and the War Service Grants Act. The functions of the Branch are to administer the following:—

- |   |   |
|---|---|
| (1) Out-of-work allowances.                           | (5) The War Veterans Assistance Fund.   |
| (2) Unemployment insurance contributions of veterans. | (6) Vocational and university training. |
| (3) Temporary Incapacity Allowances.                  | (7) The Veterans' Land Act.             |
| (4) Awaiting>Returns Allowances.                      | (8) War Veterans Allowances.            |

The Department also renders assistance to veterans and advises them in social problems through the Social Service Division of the Veterans Welfare Services Branch. A major function of this Division is to help the field staff apply sympathetic knowledge and skill in dealing with such problems. This is done by consultation on individual cases and by participation in formal training programs. The Department helps the veteran to make the fullest possible use of community social services in meeting his difficulties. At the same time, it does not duplicate any service which is already available to him as a citizen. For these purposes the Social Service Division maintains close liaison with other public welfare departments at all levels of government, private social agencies, community chests, and councils and schools of social work. The Division also participates in research and experimental work on welfare matters with which the Department is concerned.

**Rehabilitation of Women.**—The rehabilitation of women veterans has continued side by side with that of the male veterans and no particular problems have been encountered.

A high percentage of the women veterans have taken advantage of the provisions for training under the Veterans' Rehabilitation Act and up to Mar. 31, 1950, more than 13,650 approvals for training allowances were made. Also, up to the same date, 467 women veterans were settled under the Veterans' Land Act.

In their use of the re-establishment credit, women veterans have utilized more than 93 p.c. of the total amount approved for purposes directly connected with the home. To Mar. 31, 1950, a total of \$6,249,250 in re-establishment credits had been authorized for expenditure.

**Casualty Rehabilitation.**—The rehabilitation of veterans with physical disabilities is a process that commences at the time a disabling condition is diagnosed. The objective of this rehabilitation is the return of the disabled veteran to the best possible physical, mental, social, economic, and vocational adjustment and usefulness of which he is capable. This definition sets not only the standards to be attained, but also indicates the type of problem encountered most frequently.

The Casualty Welfare Division, the function of which is to provide vocational guidance, assistance in securing suitable employment and vocational after-care, maintains a register of all those veterans whose disabilities in relation to other factors, such as education, previous employment experience, and personality, constitute a serious problem in occupational adjustment.

There were, up to Mar. 31, 1950, 34,946 registrations with this Division of which 11,196 were still active cases. The registration according to the type of disability is shown in the following statement:—

<i>Type of Disability</i>	<i>Active Cases</i>	<i>Closed Cases</i>	<i>Total</i>
	No.	No.	No.
Amputation.....	402	1,726	2,128
Other muscular and skeleton system disabilities...	2,915	8,379	11,294
Total and partial loss of hearing or sight.....	601	1,862	2,463
Neurological cases.....	395	836	1,231
Heart and vascular system.....	736	2,482	3,218
Respiratory disabilities.....	4,594	5,035	9,629
Mental and emotional disabilities.....	427	488	915
Unclassified.....	1,126	2,942	4,068
<b>TOTALS.....</b>	<b>11,196</b>	<b>23,750</b>	<b>34,946</b>

Among the national agencies with which the Department is in continuous liaison in connection with casualty welfare are: the Army, Navy and Air Force Veterans Association; the Canadian Legion, B.E.S.L.; the Canadian National Institute for the Blind; the Canadian Paraplegic Association; the Canadian Red Cross Society; the Canadian Tuberculosis Association; the National Society for the Deaf and Hard of Hearing; and War Amputations of Canada.

During the fiscal year ended Mar. 31, 1950, the total number of registrants increased by about 2,000 cases but the number of active cases decreased by approximately 2,260 cases. Progress in the rehabilitation of the cases between Mar. 31, 1949, and Mar. 31, 1950, was as follows:—

<i>Status</i>	<i>Mar. 31, 1949</i>	<i>Mar. 31, 1950</i>
	No.	No.
Employed.....	24,478	26,826
Unemployed.....	1,592	1,466
Receiving treatment, training or other services.....	5,551	5,032
Rehabilitation not feasible.....	997	1,342
Unknown.....	332	280
<b>TOTALS.....</b>	<b>32,950</b>	<b>34,946</b>

**Rehabilitation of Older Veterans.**—The welfare of the older veteran has become firmly established as an important function of the Department of Veterans Affairs.

Continuous educational work conducted in co-operation with the Department of Labour and National Organizations has created a general awareness of the importance of maintaining the mature, middle-aged worker in gainful productive employment until he reaches an acknowledged retirement age.

The Department's responsibilities in this regard are not lessening with the advancing age of veterans of the First World War. Many veterans of the Second World War have now reached mature age and thousands more will reach this state every succeeding year.

The workers' need for basic economic security upon retirement, generally at an earlier age than presently prescribed for old age pension, has activated great growth of contributory private pension retirement plans. These laudable plans usually contracted through insurance companies or the Canadian Government Annuities Branch are based on group coverage and stress the minimum number of future employment years required to earn the basic retirement pension. Such actuarial arrangement has the effect of closing the employment door to workers above the age at which they may enter and complete the years of service required for full entitlement under these various pension plans.

The War Veterans Allowance provides in effect a retirement pension for entitled veterans not otherwise basically provided for. This benefit is of very great assistance in countering the reluctance of employers to engage older veteran workers because of the terms of pension plans. It is proving a valuable instrument in the placement of veterans in this category.

By enlisting support of veterans' organizations and other groups a national chain of voluntary committees is being developed, each accepting local responsibility in co-operation with the Department and the National Employment Service toward their own unemployed older veterans.

The need for intensification of effort in this field is borne out by an increase of registered unemployed veterans of the First World War and of dual service from 8,586 at Mar. 31, 1949, to 12,284 at Mar. 31, 1950.

During the twelve months of the 1949-50 fiscal year, 44,385 older veteran employment registrations were made at National Employment Service offices. By mutual arrangement all such registrants are individually considered and their placement assisted by staffs of the two Departments. In the course of assessment of work potential and economic position, War Veterans Allowance, treatment, or social welfare service is often indicated and the veteran assisted accordingly.

**Employment and Allowances.**—The return to civil life and gainful employment of veterans has been greatly assisted by the National Employment Service of the Department of Labour, which, through the policy of veterans preference and by untiring effort, has kept the numbers of unemployed veterans at a minimum. Unemployment among veterans follows the normal seasonal trend and, during the fiscal year ended Mar. 31, 1950, an average of approximately 8,100 placements per month were made by the National Employment Service for veterans of the Second World War. Peak and low unemployment figures for veterans of the Second World War in the fiscal year ended Mar. 31, 1950, were 57,633 and 17,664, respectively. Corresponding figures for the previous fiscal year were 44,811 and 12,344 and for 1947-48 they were 45,833 and 17,749, respectively.

*Out-of-Work Allowances.*—Since applications for out-of-work allowances must be made within a period of 18 months after discharge the numbers in receipt of the allowance declined rapidly. This allowance, during the immediate post-discharge period, served the purpose of providing assistance to veterans who were in the process of obtaining employment and during the period 171,310 awards were made.

*Unemployment Insurance Contributions.*—During the 1949-50 fiscal year contributions paid numbered 50,706 for an amount of \$5,280,339 as compared with 127,633 payments for \$13,640,615 in the previous fiscal year. From November, 1941, to Mar. 31, 1950, a total of 509,469 payments—including 17,900 payments on behalf of female veterans—have been made for contributions totalling \$48,632,607.

*Temporary Incapacity Allowances.*—During the 1949-50 fiscal year there were practically no activities under this allowance. Up to Mar. 31, 1950, 4,754 veterans had received assistance.

*Awaiting>Returns Allowance.*—This allowance was instrumental in assisting, up to Mar. 31, 1950, a total of 59,035 veterans, including 341 women veterans, who had taken up occupations on their own account.

As at Mar. 31, 1950, there were 584 veterans receiving the allowance and 997 were temporarily suspended, pending final decision as to whether or not further payments should be made.

The occupational and geographical distribution of these veterans by district is shown in Table 3.

Of the veterans who discontinued receipt of the allowance, 90 p.c. were successfully established in the occupation of their choice.

**War Veterans' Assistance Fund.**—During the year 1949 an Assistance Fund was established under authority of the Appropriation Act No. 1 of 1949. The need for this Fund was confirmed by two welfare surveys conducted by the Welfare Services Branch of the Department. These surveys showed that approximately 21 p.c. of War Veterans Allowance recipients living in rural areas and 27 p.c. of those living in urban areas were unable to manage on the current allowance. The Assistance Fund was introduced to supplement the allowance in such cases.

District Assistance Fund Committees were established in each District Office of the Department. The District Committee has the responsibility of investigating and adjudicating on each application. Approved applications are paid from the District Treasury Office, thus making the funds available to veterans in need as rapidly as possible.

**Vocational and University Training.**—The vocational training program, authorized under the Veterans' Rehabilitation Act, is dealt with in the Labour Chapter at p. 690, and the university training for veterans program in the Education Chapter at p. 304.

**The Veterans' Land Act.**—The Veterans' Land Act is designed to assist veterans who are eligible by reason of service and who can qualify in becoming established on the land in full-time farming, part-time farming (small holding), or commercial fishing. Its financial benefits enable the veteran to start off with a substantial equity, which past experience has demonstrated is essential to sound credit land-settlement operations.

The provisions of the Act will be found on pp. 1072-1073 of the 1946 Year Book and explanations of amendments made to the Act in 1946 and 1947, respectively, on pp. 1148-1149 of the 1947 edition and on p. 1157 of the 1948-49 edition.

Two important changes to the Act were made, however, during 1949-50:—

- (1) Section 9A was added which permits the Director of the Act, when such action appears to be in the best interests of the veteran and where, at the same time, it will improve or maintain the Director's security, to effect the sale of all or part of a property on behalf of and at the request of a veteran, and to redisburse the sale proceeds for the purchase of other property for the veteran or for the improvement of the remainder of his property.

Action of this kind is considered to be in the nature of ordinary business transactions and should substantially assist veterans in the improvement of their properties and consequently in their chances of success. It is not intended, however, to permit veterans to speculate with their properties and certain safeguards are contained in this new section of the Act to prevent transactions of a purely speculative nature.

- (2) Regulation 31 was revoked and new Regulation 31 enacted by Order in Council P.C. 800 dated Feb. 17, 1950. This Regulation requires:—

- (a) That a veteran established on the land in full-time farming must personally operate his property during the ten-year conditional-grant period; and
- (b) That a veteran established on the land in part-time farming (small holding) or commercial fishing must personally reside on and operate his property during the ten-year conditional-grant period.

The Director, at the request of a veteran, may approve from time to time the temporary discontinuance by the veteran of personal residence on and operation of his property but such approvals shall be for not more than one year at any one time and, except with the approval of the Minister, shall not exceed two years in the aggregate during the ten-year conditional-grant period.

An important part of ensuring the success of the veteran who settles on the land lies in the correct and fair appraisal of the land prior to its purchase for settlement purposes. As at Mar. 31, 1950, 33,331 full-time farming properties, 21,766 small

holdings and 912 commercial fishing properties had been appraised for project purposes or for immediate resale to veterans under the terms of the Veterans' Land Act. The number of acres purchased in these three categories amounted to 3,984,984 in full-time farming, 117,581 in small holdings and 10,021 in commercial fishing properties.

Considerable attention was directed during the year to the encouragement of veterans in the development of their properties. In the field of full-time farming, a long-term development and farm management service program was evolved and introduced. The program, which utilizes Administration officials, particularly the Settlement Officers, as the link between the source of up-to-date agricultural practices and the farmer-veterans, emphasizes complete farm planning and good business management by which it is considered the veterans can and will be in a better position to operate their farms profitably.

In addition to the small holding competitions which were held during the year to encourage veterans to develop and enhance the value of their properties, a small-holding development program was founded and introduced. The program envisages intensive administrative assistance to veterans in the proper planning and utilization of their properties.

During the fiscal year 1949-50 a total of 9,101 veterans were qualified for settlement; financial assistance was approved for 5,629; a total of 1,896 houses were completed and 1,834 brought under construction on the individual contract basis.

Table 4 gives an indication of the number of veterans who have qualified for settlement; the number who have been approved for financial assistance, and the amounts approved in the form of loans and grants to these veterans since the legislation was passed.

**4.—Summary of Settlement Status, Loans and Grants under the Veterans' Land Act, 1942, as at Mar. 31, 1950**

Item	Full-Time Farming	Small Holdings	Commercial Fishing	Provincial Lands	Federal Lands	Total
Qualified for settlement..... No.	29,909	30,457	1,010	5,006	243	66,625

British Columbia.....	11,131	3,734	134	1,292	314	1,994
<b>Totals.....</b>	<b>67,515</b>	<b>24,793</b>	<b>1,493</b>	<b>8,353</b>	<b>1,188</b>	<b>13,759</b>

The heavy settlement operations witnessed in previous years continued during 1949-50 especially with respect to small holding establishments and individual house construction related thereto.

The Administration gave active promotion to the "Build Your Own Home" plan whereby the veteran acts as his own contractor under the supervision of Veterans' Land Act construction officials, with the result that the number of houses constructed by veteran-contractors approached 70 p.c. of the total. In association with promotion of this plan, the Administration arranged, across the country, for the holding of evening construction courses for potential veteran-contractors.

**6.—House Construction under the Veterans' Land Act, 1942, as at Mar. 31, 1950**

Item	Full-Time Farming	Small Holdings	Commercial Fishing	Provincial Lands	Federal Lands	Total
	No.	No.	No.	No.	No.	No.
Houses completed.....	564	7,403	134	406	22	8,529
Houses under construction.....	236	1,665	37	251	24	2,213
Houses projected.....	463	1,240	45	397	38	2,183
Net applications for new housing.....	1,263	10,308	216	1,054	84	12,925

As a result of these operations, individual house construction under the Veterans' Land Act remained at a high level and many veterans were enabled to acquire homes, within the financial ceiling of the Act, who could not have obtained them otherwise.

**Veterans Life Insurance.**—The administration and statistics concerning veterans life insurance will be found at pp. 1090-1091.

**The War Veterans' Allowance Act.**—This Act was introduced in 1930 to make provision for veterans who were incapable of maintaining themselves on attaining the age of 60 or at any age if permanently unemployable and, as a result, in need of financial assistance.

A new Act was passed in 1946 and this was further amended in 1948. A summary of the provisions of the Act is provided at pp. 1150-1151 of the 1948-49 edition of the Year Book.

From the inception of the Act to Mar. 31, 1950, a total of 69,254 awards were made by the War Veterans' Allowance Board. Of these, 35,930 were discontinued because of death or other reasons, leaving 33,324 recipients for whom there is an annual liability of \$19,971,703.

The majority of the current recipients are veterans of the First World War. However, there are 75 orphans, 6,606 widows, 60 veterans of the North West Field Force, 336 veterans of the South African War, 1,145 veterans of the Second World War and 337 dual-service veterans included in total recipients.

As a result of the amendments made to this legislation during the Parliamentary Session of 1950, the adjudication of applications for War Veterans' Allowances has been delegated to district authorities appointed under its amended provisions; the War Veterans' Allowance Board at Ottawa will continue to function as the Administrative Board and Board of Appeal and Reviews.

### Section 5.—War Disability Pensions

The Pension Act and the Civilian War Pensions and Allowances Act are administered by the Canadian Pension Commission, which has its Head Office in the Daly Building, Ottawa. The Commission is attached to the Department of Veterans Affairs and reports to Parliament through the Minister of that Department.

In each District Office of the Department of Veterans Affairs there is a District Pension Medical Examiner and his staff. He is the local representative of the Commission.

A summary of the development of Canadian pensions legislation following the First World War is outlined at pp. 758-760 of the 1943-44 Year Book. A further review of the procedure and summary of the changes made after the Second World War may be found at pp. 1146-1149 of the 1948-49 Year Book.

As at Mar. 31, 1950, there were in force 195,907 pensions with an annual liability of \$93,965,639; statistics from 1941 are provided in Table 7.

#### 7.—Pensions in Force as at Mar. 31, 1941-50

NOTE.—Figures for the years 1918-40 are given at p. 871 of the 1945 Year Book.

Year Ended Mar. 31—	To Dependants		For Disability		Totals

The substantial increase in annual liability for both Wars in the 1949 figures resulted from the increase in the basic scale of pensions which was retroactive to Oct. 1, 1947.

Information concerning claims arising out of service during peacetime, civilian war pensions and allowances and the payment of pecuniary grants for gallantry awards will be found at pp. 1148-1149 of the 1948-49 edition of the Year Book.

**Veterans' Bureau.**—The Veterans' Bureau, staffed by Pensions Advocates, most of whom are lawyers, was established in 1930 to assist the applicant for war disability pension and present his claim to the Canadian Pension Commission. (See 1947 Year Book, p. 1142.) The services of the Bureau are free to the applicant. Pensions Advocates assist not only ex-members of the Armed Forces, but also those given disability pension rights under the Civilian War Pensions and Allowances Act. Claimants are represented by Pensions Advocates in almost all the appeals heard.

In addition to assisting applicants on entitlement claims, Pensions Advocates are charged with the duty of advising and assisting ex-service personnel or other persons entitled to claim for pension on any phase of pension law or procedure which may have a bearing on the pension claim. In all offices across Canada they are called upon daily to advise and assist in such matters.

Departmental records show that a total of 2,048 applications for an Appeal Board hearing were filed during the fiscal year 1949-50; this compares with 2,225 filed in the previous fiscal year. Since Sept. 1, 1939, a total of 17,879 applications for Appeal Board hearings have been filed. The Veterans' Bureau had approximately 7,702 pension claims under preparation in varying stages of activity at Mar. 31, 1950.

# CHAPTER XXIX.—MISCELLANEOUS ADMINISTRATION

## CONSPECTUS

6. Provincial Parks.....	—	1,685 <sup>9</sup>	14	14,071	—	31,823
<b>Totals, Land Area.....</b>	<b>219,723</b>	<b>237,975</b>	<b>248,800</b>	<b>339,279</b>	<b>1,458,784</b>	<b>3,499,116<sup>5</sup></b>

<sup>1</sup> Excludes 3 sq. miles in Labrador. <sup>2</sup> Does not add to total for Canada due to fractions of sq. miles. <sup>3</sup> Includes the Gatineau Park (25 sq. miles) and the Quebec Battlefields Park (0.36 sq. miles) which are under federal jurisdiction but which are not technically National Parks. <sup>4</sup> Less than 1 sq. mile. <sup>5</sup> Excludes Coast of Labrador. <sup>6</sup> Includes 952,849 sq. miles set aside by Order in Council as native game preserves, in which only Indians and Eskimos may hunt, as game sanctuaries in which hunting and trapping is otherwise forbidden, and as reserves for reindeer grazing, but which are not regarded as National Parks. <sup>7</sup> Includes Wood Buffalo Park (13,675 sq. miles) which, although reserved by the Federal Government, is not administered as a National Park. <sup>8</sup> That portion of Wood Buffalo Park in N.W.T. <sup>9</sup> Includes 1,392 sq. miles of unsurveyed lands—Provincial Park areas.

### Subsection 1.—Federal Public Lands\*

The public lands under the administration of the Federal Government comprise: lands in the Northwest Territories, including the Arctic Archipelago and the islands in Hudson Strait, Hudson Bay and James Bay; lands in Yukon; Ordnance and Admiralty Lands; National Parks and National Historic Sites; Forest Experiment Stations; Experimental Farms; Indian Reserves; and, in general, all public lands held by the several Departments of the Federal Government for various purposes connected with federal administration. In 1950 the Dominion Lands Act, c. 113, R.S.C., and the Ordnance and Admiralty Lands Act, c. 58, R.S.C., were repealed and the Territorial Lands Act and the Public Lands Grants Act were enacted to replace them. These Acts came into effect June 1, 1950.

The largest land areas under federal administration are the Northwest Territories and Yukon, amounting to about 1,458,784 sq. miles or 42 p.c. of the land surface of Canada. In general, the southern border of both the Northwest Territories and Yukon is 60° N. latitude. In Europe the cities of Oslo, Stockholm and Leningrad are near this line; about three-quarters of Norway, two-thirds of Sweden, Finland and a large portion of Russia are north of it. This northern part of the national domain is under the administration of the Development Services Branch of the Department of Resources and Development.

**Recent Mining Developments in the Northwest Territories.**—The construction of roads and the increase in power supply due to the completion of the Snare River Project in 1948 have proved to be of great assistance to the mining industry.

In October, 1950, there were four producing gold mines in the Northwest Territories—the Con-Rycon Mine, Negus Mine, Giant Yellowknife Mine and the Discovery Yellowknife Mine.

The Con-Rycon Mine, situated about one mile south of Yellowknife in the Yellowknife Mining District, is operated by the Consolidated Mining and Smelting Company of Canada, Limited. The main shaft is sunk to a depth of 2,460 feet and lateral development to Aug. 31, 1950, amounted to about 73,650 feet. This mine was the second largest producer of gold in the Northwest Territories in 1949. Total production in that year amounted to approximately 59,630 fine oz. Production in 1950 to July 31 was 31,994 fine oz. Of the 319 men employed at Aug. 31, 1950, 137 worked underground. Ore was being milled at the rate of about 305 tons per day.

The Negus Mine, adjoining Con-Rycon on the south, at Aug. 31, 1950, was milling at the rate of about 190 tons a day. The main shaft was sunk to a depth of about 1,940 ft. and production was being obtained from between the 11th and 13th levels. Lateral development amounted to about 42,565 ft. Gold production in 1949 was about 23,862 fine oz. and production in 1950 to July 31 was 11,363 fine oz. Of the 148 men employed during the month of August, 1950, 71 worked underground.

The Giant Yellowknife Gold Mine, situated about three miles north of Yellowknife, was the largest producer of gold in the Northwest Territories in 1949, production being 88,971 fine oz. To July 31, 1950, production amounted to 56,391 fine oz. During 1950 all ore came from the No. 2 shaft which was sunk to a depth

\* Prepared under the direction of Major-General H. A. Young, C.B., C.B.E., D.S.O., Deputy Minister, Department of Resources and Development, Ottawa.

of 780 ft., but the No. 3 shaft was completed to a depth of 1,029 ft. and a steel head-frame for ore and for waste bins was constructed. At Aug. 31, 1950, no lateral development had taken place from the No. 3 shaft, but total lateral development from the No. 2 shaft amounted to about 18,300 ft. Of the 275 men employed during the month of August, 1950, 117 worked underground.

The Discovery Yellowknife Mine, situated 50 miles north of Yellowknife in the Quyta-Giauque area, is the latest producer in the Territory. This mine commenced milling about Jan. 1, 1950, and poured its first brick on Feb. 10. Milling commenced at the rate of 60 tons a day and by August, 1950, the rate had been increased to about 90 tons a day. The shaft had been sunk to a depth of 385 ft. and lateral development had been carried on, on the 125, 250 and 375 ft. levels. Production of gold to July 31, 1950, amounted to 10,504 fine oz. Of the 77 men employed during the month of August, 31 were employed underground.

During 1950, exploration was continued for base metals by the Consolidated Mining and Smelting Company of Canada, Limited, on the 500 sq. mile Pine Point Concession on the south shore of Great Slave Lake and on Parcel "D" consisting of 320 sq. miles adjoining the original Pine Point Concession on the east. These concessions were granted in March, 1948, and March, 1949, respectively, and about 75,816 ft. of diamond drilling has been done and over 100 miles of roads built. Total expenditures by the concessionaires at Aug. 31, 1950, amounted to about \$623,430.

During 1950, diamond drilling and other forms of development work was done at the properties of Akaitcho Yellowknife Gold Mines, Lynx Yellowknife Gold Mines, Captain Yellowknife Gold Mines, Atlas Yellowknife Gold Mines, Mate Yellowknife Gold Mines, Circle Yellowknife Mines, Greenlee Mines, Garsky Gold Mines, Bulldog Yellowknife Gold Mines, Homer Yellowknife Gold Mines, Salmita Consolidated Gold Mines, Indigo Consolidated Gold Mines, Frobisher, Limited, and J. McAvoy.

The production of pitchblende concentrates was continued by the Eldorado Mining and Refining (1944), Limited, a Crown Company, operated at Port Radium on Great Bear Lake. This property is one of the world's principal sources of uranium. Production figures are not available for publication. Isabella Mining and Development Company and Indore Gold Mines, Limited, did some development work on uranium showings in the vicinity of Isabella Lake and Hottah Lake, respectively.

Imperial Oil, Limited, continued production of petroleum products at Norman Wells in the lower Mackenzie Basin and at Sept. 30, 1950, 18 permits to explore for petroleum and natural gas, covering an area of about 64,000 acres each, had been granted to various companies in the vicinity of Fort Providence and Fort Liard and applications for 15 additional permits were under consideration.

The value of mineral production in the Northwest Territories in 1949, amounted to \$6,801,729, made up as follows: gold \$6,389,748, silver \$52,350, crude petroleum \$353,108 and natural gas \$6,523.

During the fiscal year ended Mar. 31, 1950, 911 miners licences and 1,790 quartz grants were issued. In addition, 2,102 assignments of mineral claims were recorded and 31 leases, comprising 1,594.57 acres, were issued under the Quartz Mining Regulations.

Twelve parties of the Geological Survey of Canada, Department of Mines and Technical Surveys operated in the Northwest Territories during the 1950 season. The lead-zinc deposits in the Pine Point region were inspected and the Snowdrift

metalliferous area mapped. Four-mile mapping continued in the Carp Lake Christie Bay and Fort Reliance areas as well as detailed mapping in the Carp Lake gold area northeast of Yellowknife. Geological mapping was continued on southern Baffin Island and similar work in relation to coal, oil and gas on Cornwallis Island. Geological exploration was carried on in the northern Arctic and a specialized study made of temperature and formation of quartz veins in the gold-producing Yellowknife area.

**Lands and Timber and Other Developments.**—For the first seven months of the fiscal year 1950-51, 810 leases and permits to occupy land were in force in the Northwest Territories. In the same period 73 timber permits and 12 commercial timber berth permits were issued.

The water and sewage systems for the new section of Yellowknife settlement, commenced in 1947 and brought into operation in December, 1948, were completely installed by October, 1949. This utility was operated by the Department of Public Works until Mar. 31, 1950, when the Northwest Territories Administration assumed the responsibility. During the summer of 1950, a summer pure water supply system was constructed and brought into operation at Aklavik; an all-year system was scheduled for completion at Fort Smith by the end of 1950. School buildings were erected at Coppermine, Cape Dorset, and Fort Simpson in 1950, and at the end of the year schools in operation included the public and high school at Yellowknife, operated by the Local Administrative District, and territorial day schools at Fort Smith, Aklavik, Port Radium, Fort Simpson, Fort Resolution, Port Brabant, Cape Dorset, Coppermine, Coral Harbour on Southampton Island, Port Harrison, Que., Fort Chimo, Que., and Lake Harbour on Baffin Island.

The Mackenzie Highway, an all-weather gravelled road, was completed in 1948, from Grimshaw, Alta., to Hay River settlement, Great Slave Lake, with joint Federal and Province of Alberta funds, to convey goods to the south shore of Great Slave Lake for transhipment by water to the various settlements in Mackenzie District. On the return trip, the trucks transport fresh fish from Great Slave Lake. A commercial passenger bus service also began operations in 1950 between Edmonton and Hay River. This was supplemented by a passenger boat service between Hay River and Yellowknife.

The fur trade continues to be an important factor in the economy of the Northwest Territories; a catch of 922,136 pelts valued at \$1,535,461 was recorded for the year ended June 30, 1949. Trapping is the chief occupation of the native population. Hunting and trapping in the Northwest Territories are restricted mainly to natives and to half-breeds leading the life of natives.

Progress continues in the development of an improved forest conservation and wildlife protection service. Headquarters is at Fort Smith and regular patrols are maintained and modern fire-fighting equipment has been provided.

Inspections of conditions in settlements in the Mackenzie District were carried out during 1950 by officers of the Administration from Ottawa, and by the district administrators at Fort Smith and Aklavik.

In 1950, the annual Eastern Arctic Patrol, carrying replacement personnel, and the year's supplies to Royal Canadian Mounted Police Detachments, medical centres, radio and weather stations, trading posts, missions and schools, was carried out by the new Government vessel, the *C. D. Howe*, assisted by vessels belonging to the Hudson's Bay Company and the missions. Officers of the Administration also covered certain parts of the Canadian Arctic by air to investigate and report

upon such matters as Eskimo economy, food and health conditions, trading, handicrafts, administration of family allowances, relief and old age allowances, education and social conditions, vital statistics, and other items of general administration.

The Royal Canadian Mounted Police maintains law and order throughout the Territories.

**Recent Mining Developments in Yukon.**—The value of mineral production in Yukon in 1949 showed a favourable increase over 1948, mainly due to an increase in gold production. In view of the world demand for base metals, however, and the resulting increase in activity in this field, particularly in the vicinity of Mayo, the value of silver, lead and zinc production will very shortly comprise a considerably larger portion of the total value of production.

In the silver and base-metal field United Keno Hill Mines, Limited, established a record production. In 1949, the silver production of Yukon amounted to 1,562,730 fine oz. valued at \$1,160,327, lead production amounted to 5,356,405 lb. valued at \$846,312 and zinc production was 847,246 lb. valued at \$112,235. Gold production in 1949 amounted to 81,970 fine oz., valued at \$2,950,920, an increase of 21,356 fine oz. over 1948. This production was obtained from placer operations in the Dawson Mining District.

Yukon Consolidated Gold Corporation, Limited, the principal producer of placer gold in Yukon operated eight dredges in the Dawson District in 1949 and 1950 and employed an average of more than 400 men.

Yukon Gold Placers, Limited, operated a dredge on each of Henderson and Thistle Creeks, and its subsidiary, Clear Creek Placers, Limited, continued operations with a diesel-driven dredge on Clear Creek. Other companies producing gold from placer operations were: Yukon Placer Mining Company; Bedrock Mining Company and Miller Creek Placers in the 60-Mile area; Reno Gold Mines, Limited, in the Henderson Creek and Thistle Creek area; Kluane Dredging Company, Limited; and Burwash Mining Company, Limited, in the Kluane Lake area.

Interest in quartz mining was stimulated by the increased demand for base metals, and the Mayo Mining District remained the centre of lode mining. United Keno Hill Mines, Limited, was the principal producer of base metals, the bulk of its production coming from the Calumet-Hector Mine at Galena Hill. Mayo Mines, Limited, conducted a small operation on Sourdough Hill in 1950, shipping high-grade silver and lead ore to the smelter. Other companies engaged in representation work on quartz claims in the Mayo Mining District were Consolidated Yukeno Mines, Limited, and Murmac Lake Athabaska Mines, Limited. In addition a number of individual operators worked their claims. Hudson Bay Exploration and Development Company, Limited, Noranda Mines, Limited, Brown-McDade Mines, Limited, and Helicopter Exploration Company, Limited, carried on prospecting in the Whitehorse District under the Quartz Mining Act.

Operations were continued at the Tantalus Butte Coal Mine near Carmacks during the 1950 season but production showed a decrease of 435 tons from the 1949 production.

The improvement of roads in Yukon and the facilities of the White Pass and Yukon Route, both on the railway and along the Yukon and Stewart Rivers, have made access to mining properties easier than in the Northwest Territories. Completion of the Mayo Minto Road has eased greatly the shipping problems of United Keno Hill Mines, Limited.

The Geological Survey of Canada, Department of Mines and Technical Surveys, continued a program that will eventually result in a complete series of standard geological maps on a scale of 4 miles to 1 inch, with reports on the main geological features, and with detailed studies of certain areas. The mapping has been planned to cover the most promising areas first and the requisite vertical aerial photography is now almost completed. Six parties worked in Yukon this season.

A mining inspection service was maintained throughout 1950 in Yukon, under the provisions of the Mines Safety Ordinance of the Northwest Territories and the Yukon Mining Safety Ordinance, and periodic inspections of all important mining properties were carried out.

Surface leases and permits to occupy in effect in the fiscal year 1950-51 totalled 103; 276 timber permits and 33 commercial timber berth permits were issued during the first seven months of the fiscal year.

**Road Construction and Other Developments.**—Maintenance of the Alaska Highway passed from United States authority to the Northwest Highway System (Canadian Army) on Apr. 1, 1946, and restrictions on tourist travel were lifted early in 1948. During 1950, the Development Services Branch of the Department of Resources and Development maintained 10 overnight camp grounds and 5 lunch stops along the Highway in Yukon for the convenience of the travelling public.

Construction of an all-weather gravelled road from Whitehorse to Mayo, begun in 1948, was completed in 1950. This road, which was built with funds supplied by the Federal Government, now provides the silver-lead mining district of Mayo with access to the Alaska Highway and railhead at Whitehorse, and to the Tantalus Butte Coal Mine near Carmacks. Another all-weather gravelled road, completed in 1950, was the 58-mile link between the gold-mining district of Atlin, B.C., and the Alaska Highway at Mile 867, Jake's Corner, Yukon. Funds for construction of the Atlin Road were provided jointly by the British Columbia and Federal Governments.

The Department of Agriculture's experimental substation on the Alaska Highway, approximately 100 miles west of Whitehorse, continued operations in 1950. Experiments with cereal varieties and forage crops have produced encouraging results, and the poultry and cattle introduced on the substation in 1948 have proved quite adaptable.

The fur trade continued to be a source of revenue for the inhabitants of Yukon, especially the native population. During the year ended June 30, 1949, the catch numbered 151,969 pelts valued at \$143,810.

The program of aerial photography in Yukon was continued on an enlarged scale by photographic squadrons of the Royal Canadian Air Force.

Law and order are maintained throughout Yukon by the Royal Canadian Mounted Police.

### Subsection 2.—Provincial Public Lands

By the Terms of Union which became effective Mar. 31, 1949, Newfoundland and the Coast of Labrador became a province of Canada. All lands in that Province, with the exception of 6,674 sq. miles which have been alienated and two square miles of federal land, are administered by the Provincial Government. In Prince

Edward Island all the land is alienated and there are no provincial public lands. In the other Maritime Provinces and in Quebec, Ontario and British Columbia (except the Railway Belt and the Peace River Block), public lands have been administered by the Provincial Governments since the time of Confederation. In 1930 the Federal Government transferred the natural resources of the Prairie Provinces and of sections of British Columbia to the Provincial Governments concerned, so that, since that year, public lands in all provinces have been under provincial administration. Information regarding provincial public lands may be obtained from the respective provinces. (See the Directory of Sources of Official Information, Chapter XXX under "Lands".)

In certain of the provinces extensive areas have been set aside from provincial lands as parks and reserves. These areas are dealt with in Chapter I, pp. 32-36.

## Section 2.—The Indians and Eskimos of Canada

### THE INDIANS OF CANADA\*

**History.**—The Indians, it is believed, came in successive migrations in pre-historic times from northern Asia, probably by way of Bering Strait. They are not one race, but are divided into a number of basic linguistic stocks or language groups which are, in turn, subdivided into tribal groups with many local dialects. There are ten linguistic groups, of which four are found east of the 'Rockies'—Algonkian, Athapaskan, Iroquoian, and Siouan—and six are found west of the 'Rockies' in British Columbia—Kootenayan, Salishan, Wakashan, Tsimshian, Haida, and Tlinkit. They are subdivided further into many tribes with widely differing physical and psychological characteristics and cultures. The Indians of Algonkian stock are the most numerous, cover an area from the Atlantic Ocean to the Rocky Mountains, and include such well-known tribes as the Micmacs of the Provinces of Prince Edward Island, Nova Scotia and New Brunswick, the Montagnais of Quebec, and the Ojibwas, Crees, and Blackfeet. Iroquoian stock, including the Hurons, are found mainly in Ontario and Quebec. Athapaskan stock inhabit the Northwest Territories and Yukon while tribes of Sioux are located in Manitoba, Saskatchewan and Alberta.

Before the advent of the European, the number of Indians was undoubtedly larger than to-day, but little reliable information is available as to the population during either the French or the early British regimes. The best estimate, however, of the aboriginal Indian population of what is now Canada is slightly in excess of 200,000.

Shortly after the intrusion of European settlers throughout their domains the Indian population began to dwindle. The major contributing factors for this decrease were: (1) the necessity for sudden and often complete change in habits of life; (2) the near extinction of the buffalo and other species of wild game as major food, clothing, and shelter items in the economy of Indian life, and the adoption of non-Indian foods and diet; (3) the introduction of diseases not prevalent among the Indians, such as measles, whooping-cough, scarlet fever, smallpox, tuberculosis, and venereal diseases; (4) the comparative closer confinement and congestion and the adoption of houses at permanent locations as contrasted with the former nomadic life in temporary teepees; (5) slowness to adjust to conditions imposed by European civilization, which was so completely different from their own.

\* Prepared under the direction of Laval Fortier, Deputy Minister, Department of Citizenship and Immigration, Ottawa.

Succeeding generations have overcome the first shock of contact with civilization and are gradually becoming adjusted to modern conditions. During the twentieth century there has been a slow but steady increase in the Canadian Indian population, which now numbers about 126,000.

Since the inception of British rule in North America, the Indians have been regarded as a separate and special responsibility of the Government. As early as 1670, Governors of the colonies were instructed to safeguard the interests of Indians and receive and care for those who placed themselves under British protection.

Records exist from 1664 of numerous agreements and treaties made by the British with the Indians of New England when Canada was still under French government. Later, an office was established solely for the administration of Indian Affairs and, in 1755, Sir William Johnson was appointed Indian Superintendent with headquarters in the Mohawk Valley, the country of the Six Nations Confederacy, in what is now the State of New York.

The establishment of this office was the genesis of future Indian administrative organization in English-speaking North America. Following the Revolution, the British Indian Office was moved to Canada, and the title of the position was changed to Superintendent General of Indian Affairs. A continuing administrative organization has been maintained since then for the protection and advancement of Indian interests. British policy with regard to Indians in Canada was enunciated in the Proclamation of 1763, whereby their aboriginal rights were expressly recognized. The terms of the Proclamation have been reflected, before and since Confederation, in the administration of Indian affairs, by the successive Governments of Canada.

At the end of the eighteenth and the beginning of the nineteenth centuries the administration of Indian affairs was divided. The office of the Superintendent General and the Secretary of Indian Affairs was at Montreal, and that of the Deputy Superintendent General and the Assistant Secretary at Fort George (Niagara). By a general order, May 13, 1816, the management of Indian affairs was placed under the control of the Commander of the Forces in the British North American Provinces. Legislation of Apr. 13, 1830, placed the management of Indian affairs in Upper Canada under the Lieutenant-Governor, Sir John Colbourne. In Lower Canada Indian affairs remained under military control.

After the Act of Union of 1840 the head office of the Department of Indian Affairs, now united, continued to be at the seat of government, which was moved from one place to another under the old Province of Canada. The Imperial Government was responsible for the management and expense of Indian affairs until 1860, but in that year it was decided that the Province of Canada should assume the charge. By "An Act Respecting the Management of the Indian Lands and Property" (23 Vict., c. 151), the management of Indian affairs was brought under the control of the Crown Lands Department from July 1, 1860, the Commissioner of Crown Lands being from that date, Chief Superintendent of Indian Affairs.

Under the British North America Act the control of the Indians was allotted to the federal authority. Immediately following Confederation, Indian affairs was attached to the Department of the Secretary of State. In 1873, when the Department of the Interior was created, Indian affairs was transferred to it, as the Indian Affairs Branch. In 1880, under the provisions of the Indian Act, the Indian Affairs Branch became a separate Department and remained so until Dec. 1, 1936,

when it became a branch of the newly created Department of Mines and Resources. Since Jan. 18, 1950, Indian affairs have been the responsibility of a branch of the Department of Citizenship and Immigration.

After Confederation, the Parliament of Canada enacted various legislation concerning Indians, which was first consolidated in the Indian Act in 1876 and under which Indian administration is still conducted. The Act contains nearly all the Canadian law dealing expressly with Indians. The present Act, consolidated in 1880, has not been completely revised since that year, although, from time to time, it has been changed and amplified by amendments. A complete review and investigation of the Act was made during 1946, 1947 and 1948 by a Special Joint Committee of the Senate and the House of Commons; the Act is now in the process of revision.

**Administration.**—The primary function of the Indian Affairs Branch, under the Citizenship and Immigration Act and the Indian Act, is to administer the affairs of the Indians of Canada in a manner that will enable the Indian to become increasingly self-supporting and independent. The Indian Affairs Branch may be said to deal with the whole life of a people scattered in small communities across Canada. Among the leading functions of the Canadian Indian administration are: the management of Indian lands and reserves; trust funds; welfare projects; relief; family allowances; education; descent of property; rehabilitation of Indian veterans on Reserves; Indian treaty obligations; enfranchisement of Indians; and a variety of other matters.

The Indian Affairs Branch, with headquarters at Ottawa, is divided into the following services: Agencies (Field Administration); Education; Welfare; Reserves and Trusts; and Administration (Office of the Director, Office of the Secretary, Engineering and Construction Division and Records Division).

**Agencies (Field Administration).**—This Service consists of the office of a General Executive Assistant at headquarters and a field establishment including: 91 Indian agencies, each responsible for one or more Indian Reserves; the office of the Indian Commissioner for British Columbia; and offices of Regional Supervisors of Indian Agencies for Prince Edward Island and Nova Scotia, New Brunswick and Quebec, southern Ontario, northern Ontario, Manitoba, Saskatchewan and Alberta. The Service is responsible for general field administration and the carrying out of departmental policy in the field in co-ordination and co-operation with other services in their respective activities.

**Education** (*See also Chapter IX.*).—The Indian school system has continued a steady growth in the number of schools operated and in the number of children being educated. In 1934, 256 day schools were in operation with 309 teachers employed. In 1939, the number had increased to 283 schools with 333 teachers; by the end of 1949 there were 364 day schools with 562 teachers.

There has been a steady improvement also in the qualifications of the teachers employed. The policy in respect to teaching staff is as follows: (1) elimination of unqualified teachers; (2) gradual reduction in the proportion of teachers holding Second and Third Class Certificates; (3) employment, wherever possible, of teachers holding First Class Certificates.

Between January, 1948, and January, 1950, the number of teachers holding First Class Certificates increased from 97 to 172; those with Second Class Certificates remained about the same viz., 106 in 1948 and 109 in 1950. Teachers with Third Class Certificates decreased during the two year period from 120 to 95.

The aim of the Department is to provide educational facilities for every Indian child, and to that end a large-scale building program, has been undertaken. The success of this program is indicated by a marked increase in the number of classrooms provided and by a rise in school attendance of over one-third since 1947.

Educational survey committees have been established to investigate requirements on Reserves and regional areas; as a result, decisions are made with regard to the size and type of school to be erected and also its location. Where day schools are not feasible, due to the nomadic habits of the Indians concerned, residential schools are erected. Three such schools are now under construction, all in isolated parts of Canada. One is at Lower Post near the Yukon-British Columbia boundary, another is at Hay Lakes in northern Alberta, and the third is at Seven Islands on the north shore of the St. Lawrence River.

An entirely different problem from that of providing a basic elementary education for northern Indians is presented by the changing needs of the school system on Reserves located close to white communities. The Parliamentary Committee on Indian Affairs recommended that Indian children be educated, wherever and whenever possible, in association with other children. To this end, negotiations have been carried on with local School Boards and Provincial Departments of Education. There are now 1,180 Indian children in elementary grades in such schools. This is a growth of 255 pupils in one year. In 1934, about 200 children were enrolled in provincial schools.

The increase in the number of Indian pupils in schools and the improvement in methods has resulted in a steady trend towards higher education. In 1949, there were 661 pupils attending classes above Grade VIII; this represented a considerable increase over 1948. In 1950, there were 834 students attending secondary classes. Many of these young students are following vocations which will be of assistance to their fellow people, and as many as possible are being encouraged to train for teaching or nursing careers. Many of the day schools are staffed by qualified Indian teachers. On the Six Nations Reserve the supervising principal and the 18 teachers in charge of classrooms are all Indians.

**Welfare** (*See also Chapter VII*).—A housing program, in effect for four years, is being continued and on many Indian Reserves visible progress is evident. Wherever feasible, the lumber used is cut on the Reserves by Government-owned portable sawmills. This economy in basic cost, together with the fact that labour is contributed by the Indians themselves, results in very substantial progress for the amount of public funds expended. A total of 2,271 homes were repaired and 1,197 new homes were constructed during the year ended Mar. 31, 1950, at a cost of \$1,033,608. A number of Indians are assisted under the provisions of Section 94B of the Indian Act in the form of "Revolving Fund" loans for the purchase of farm machinery, live stock, fishing-boats and equipment, sawmills and logging equipment, operation of community farms, and a co-operative project for the purchase and resale of Indian baskets. The "Revolving Fund" provides a source of funds for the financing of many worthwhile endeavours which could not otherwise be undertaken.

In September, 1948, a cash allowance of \$8 per month was authorized for Indians 70 years of age or over. This cash allowance, provided in addition to other relief assistance, was intended to enable the aged person to purchase small amenities not available through ordinary relief. In July, 1950, the amount of the allowance was increased to \$25 per month and ordinary relief assistance on behalf of the

recipients was discontinued. In special circumstances relief assistance, in addition to the \$25-a-month cash payment, may be authorized to alleviate hardship arising from unusual local conditions.

In paying this allowance it is the intention of the Indian Affairs Branch to place the aged Indian on an equal footing with the non-Indian recipients of the old age pension as administered by the various Provincial Governments. Although the amount of money he receives is smaller, the aged Indian benefits from residence on tax-free land, complete medical coverage, and the generally lower cost of living on Indian Reserves. Moreover, as stated above, additional relief assistance may be provided if circumstances make such relief necessary. It is hoped that this measure will enable aged Indians in Canada to achieve a greater degree of independence and self-respect than was possible under the former system.

A supplementary estimate to the Indian Affairs Branch 1949-50 welfare appropriation provided funds for special assistance to tubercular Indians as a preventive measure and to supplement the greatly expanded facilities for treatment provided by Indian Health Services of the Department of National Health and Welfare. These funds are being used to ensure that the Indian convalescing from tuberculosis receives an adequate diet in the post-discharge period before he is well enough to fend for himself, and to care for his dependants by providing adequate food and clothing, as well as other assistance, according to individual needs. It is expected, through this measure, to reduce the incidence of relapse for convalescent tubercular cases, to reduce the number of new cases by providing adequate diet and care for the families of hospitalized Indians who have been exposed to infection, and to speed the recovery of the breadwinner in hospital by relieving his mind of concern for his dependants.

The following statement indicates the amount of family allowances distributed to Indian families by provinces in 1949:—

<i>Province</i>	<i>Amount</i>
	\$
Prince Edward Island.....	6,375
Nova Scotia.....	70,136
New Brunswick.....	63,793
Quebec.....	352,206
Ontario.....	804,517
Manitoba.....	474,980
Saskatchewan.....	415,636
Alberta.....	336,633
British Columbia.....	725,186

There was a slight reduction in new applications for grants under the Veterans' Land Act during the fiscal year 1949-50, and a reduction of 25 p.c. in supplementary applications. The value of applications approved decreased 19 p.c., and expenditures decreased 24 p.c. The amount approved and unexpended at the end of the year was \$477,190.

An important step in the field of social welfare for Indians was undertaken when positions for social workers were authorized. A qualified social worker will in the near future, be attached to the office of the Regional Supervisor in each province for work exclusively on Indian Reserves.

**Reserves.**—Reserves, or lands set aside for the use of Indian bands, number more than 2,000. They vary in size from a few acres to 500 sq. miles. Except by special expropriation for public purposes, these Reserves cannot be alienated without the mutual consent of the Indian owners and the Federal Government. All Reserve land is community property and the individual holding, in so far as the land is concerned, is only the right of occupation, although the individual holder owns his improvements. Most Indians live on these Reserves, which were designed primarily to provide them with a refuge where they could live, move and have their being without fear of exploitation or molestation. In the Far North, however, where the lands are unsettled, the Indians are organized into bands and dealt with as band groups for purposes of administration.

Eighty-one parcels of Indian lands were sold during 1949-50 and, of this number, 67 were cash sales realizing \$20,481, and 14 were time sales which will realize \$17,693. Receipts from cash sales and collections on land sale contracts amounted to \$124,527, and of this total, \$110,160 represented principal payments and \$14,367, interest payments.

Oil exploration work by licensees and permittees continued, and during the fiscal year ended Mar. 31, 1950, the petroleum and natural gas rights on 20 Indian Reserves were surrendered by the Indian bands concerned, to be leased for their benefit. At the end of that period, exploration and development contracts were in force on two Reserves in British Columbia, 24 Reserves in Alberta, four Reserves in Saskatchewan, one Reserve in Manitoba, and two Reserves in Ontario; a total of 33 Reserves. Receipts to Indian band funds from these contracts in 1949-50 totalled \$243,054.

Fifty-five timber licences were in force at the beginning of the same fiscal year and of these, 10 were completed. Two licences were forfeited and 41 licences were renewed which, with the 10 new licences issued, brought the number of licences in force at the end of the fiscal year to 51. Receipts from dues and ground rent under licences were \$187,180, and from dues under permits to Indians, \$128,774, making total receipts from timber \$315,954.

**Trust Funds.**—Many of the Indian bands have community trust funds which are administered for their benefit by the Indian Affairs Branch.

The credit balance of the Indian Trust Fund as at Mar. 31, 1950, was \$19,143,830, being \$14,833,799 in Capital Account and \$4,310,031 in Revenue Account, which at the end of the year showed increased balances of \$200,511 and \$300,678, respectively. Interest paid by the Government of Canada on the Trust Fund, at the rate of 5 p.c., amounted to \$932,928. Other major items of income to the Trust Fund included land leases, \$410,735; timber, \$310,576; oil exploration rights, \$243,054; and land sales, \$124,527.

The total expenditure from the Trust Fund in the year was \$2,540,134 chiefly for agricultural assistance, relief, distributions of cash in accordance with the provisions of land surrenders, housing construction and improvements, road building and loans to Indians.

**Fur Conservation.**—Further progress has been made toward greater co-operation with all the provinces to include the Indian trapper in benefits arising from the management of the fur resources, in which no ownership is vested in the Federal Government on his behalf, but on which, historically and traditionally, the Indian trapper has always been dependent. Formal agreements involving a substantial contribution of federal funds have been negotiated with Manitoba, Saskatchewan and Ontario. Arrangements for trap-line management have been worked out with Alberta, British Columbia and Quebec, and the extension of this work is continuing with the object of establishing an administrative liaison with all provinces.

The Manitoba program, which has increased beaver production in that Province from 6,960 pelts in 1945 to 13,576 in 1949 with a crop of 16,000 projected for 1950, was revised and extended during the year. The area covered was extended to take in that portion of the Province lying between Lake Winnipeg and the Ontario boundary, with still further extensions planned for the immediate future. All muskrat rehabilitation projects in the Province have been brought under the scope of the Agreement. The largest of these muskrat projects, the Summerberry near The Pas, has produced, during the nine years of management, 1,346,000 muskrat pelts with a total auction value of \$3,208,000, of which about \$2,400,000 was returned to the participating trappers a large proportion of whom were treaty Indians. The planned crop for the 1950 season was 150,000 muskrats with an estimated value of \$250,000.

Equally good results have been obtained under a similar agreement, in operation since 1946, with Saskatchewan. In that period beaver production on a sustained-yield basis has risen from 1,600 pelts to 8,328 valued at \$157,399 in 1949. This result can be, in large measure, attributed to a live-beaver transplanting program under which 2,085 beaver were successfully transferred to new locations. In addition to participating in the provincial management program, which includes several muskrat rehabilitation areas, this Branch has, under lease from the Province, a special project of 250,000 acres located near the Red Earth and Shoal Lake Indian Reserves on the Saskatchewan River delta. This area has produced, under management, approximately 10,000 muskrats annually during the past few seasons; however, construction work completed during the 1947-48 seasons has brought new sections into production with the result that the 1950 crop has been set at 40,380 muskrats with an estimated value to the 85 participating Indian trappers of approximately \$75,000, all of which represents Indian income.

During 1947-49 a fur-management program was undertaken in the Province of Ontario, in co-operation with the Ontario Department of Lands and Forests, which has resulted in doubling the crop of beaver and placing the entire fur-producing area of the Province under management. During 1949 an agreement similar to those in effect in Manitoba and Saskatchewan was worked out with the provincial administration.

In the Province of Quebec five fur preserves, with a total area of 63,000 sq. miles were in production. The total number of beaver pelts being harvested on a sustained-yield basis for these areas in 1949-50 was 10,500, the estimated income value to the Indian trappers being \$275,000. The 1949 production from the four areas then in production was as follows:—

### Subsection 1.—Administration of the Indians

The activities of the Indian Affairs Branch of the Department of Citizenship and Immigration include the control of Indian education and health, the development of agriculture and other pursuits among the Indians, the administration of their lands, their community funds and estates, and the general supervision of their welfare.

Indian education and welfare are dealt with in Chapters VII and IX of this volume as well as in the preceding article. The following tables summarize the position in regard to the Indian population and the lands and property held by them.

The ultimate goal of the administration is to afford the Canadian Indian opportunities as equal as possible to those of fellow Canadians of the White race. The development of community interests is encouraged and measures are taken, in the interests of the Indian, to improve production and income, and to conserve the wildlife resources on which he depends.

The Indian Affairs Branch takes a census of the Indians under its administration at five-year intervals. The results of the census of 1944 are given below, since those of the latest census taken in 1949 are not yet available.

### Subsection 2.—Administration of the Eskimos\*

The Eskimos in Canada are found principally north of the tree-line on the northern fringe of the mainland and around the coasts of the islands in the Arctic Archipelago and in Hudson Bay. Most of the Eskimos are coastal dwellers, obtaining much of their food and clothing from the mammals of the sea. However, there are bands of Eskimos living in the interior of Keewatin District, on the west side of Hudson Bay, who are inland people and who subsist chiefly on caribou and fish.

The economy of these nomadic people depends entirely on hunting, trapping and fishing. Hunting produces local food while trapping produces furs to trade for the white man's goods. Considering the variations in the supply of game for either food or fur and the drastic changes in price characteristic of the fur trade, it will be apparent that this is a precarious economy.

The 1941 Census established the Eskimo population at 7,639, of whom 1,965 were located in northern Quebec. The Eskimo population of Canada, excluding Labrador, was estimated as of January, 1950, to be 8,437.

The Department of Resources and Development is charged with the administration of Eskimo affairs. The aims of the Administration are:—

- (1) to ensure a sound Eskimo economy;
- (2) to enable the Eskimos to make a wise adjustment to the advance of civilization and to maintain their independence, initiative and integrity in the face of this advance; and
- (3) to give them full opportunity to develop to the stage where they can assume the full rights and responsibilities of citizenship.

The question of the ability of wildlife resources to support the native population is becoming an acute problem. To conserve the natural resources necessary for the subsistence of the Eskimos, the Administration has introduced game preserves where only natives may hunt and trap. In addition, game regulations provide for the efficient use of wildlife, and the Royal Canadian Mounted Police encourage hunting practices which will conserve the supply of game both on land and in the sea. The Federal Government for a number of years has operated a reindeer project near Aklavik, which was undertaken primarily as a possible means of improving the economic condition of the Eskimos. Research is going on to determine the suitability of other areas for reindeer culture and to determine the possibility of developing other resources such as fisheries, thus broadening the native economy. With the same purpose in view, Eskimo handicraft is being encouraged by the Canadian Handicraft Guild assisted by a grant from the Federal Government. Eskimos have produced for successful sale at Montreal, Que., carvings in soapstone, ivory and wood, and articles made of various skins and furs.

Social services available to the citizens of Canada in general are being extended to the Eskimos as rapidly as possible, care being taken that these services are extended in a manner and form conducive to the best interests of the native. Family allowances to Eskimos are issued in the form of goods and allowances to aged Eskimos have also been authorized.

Medical care and hospitalization of Eskimos is a function of the Department of National Health and Welfare. Missionary hospitals, maintained with Government assistance, are located at Aklavik, Chesterfield Inlet and Pangnirtung. At these

points the Department of National Health and Welfare also maintains medical health officers, who are responsible for the surrounding areas. Government nursing stations or health centres have been established at Coppermine, Coral Harbour, Cape Dorset and Lake Harbour in the Northwest Territories and at Fort Chimo and Port Harrison in Arctic Quebec.

The nomadic life of the Eskimo people places considerable difficulty in the way of formal education. For many years the missionaries have carried on some formal education assisted by Federal Government grants. Considerable attention is being devoted to devising a suitable educational program for the Eskimos, and schools staffed by welfare teachers are being established, sometimes in conjunction with the nursing stations.

In order to maintain close contact with the Eskimos, the Royal Canadian Mounted Police detachments throughout the far north act as local representatives of the administration in all matters affecting Eskimo welfare. Administrative contact is also maintained by radio and through the Eastern Arctic Patrol, which carries representatives of the administration and of other government departments on an annual inspection of conditions in the Eastern Arctic.

### Section 3.—Department of the Secretary of State\*

The Department of the Secretary of State was constituted in its present form in 1873, through the merging of the previously existing offices of the Secretaries of State for Canada and for the Provinces. The Secretary of State is the official spokesman of the Federal Government, as well as the medium of communication between the Federal and Provincial Governments, all correspondence between the Governments being conducted by him with the Lieutenant-Governors. He is the custodian of the Great Seal of Canada and the Privy Seal as well as being the channel through which the general public may approach the Crown.

The Secretary of State is also the Registrar General, registering all proclamations, commissions, licences, warrants, writs and other instruments issued under the Great Seal and the Privy Seal. He is further charged with the administration of the Companies Act, the Patent Act, the Copyright Act, the Canada Temperance Act, the Boards of Trade Act, the Trade Unions Act, the Department of State Act, the Timber Marking Act, the Trade Marks and Design Act, the Public Officers Act, the Unfair Competition Act (1932), the Translation Bureau Act, the Shop Cards Registration Act, the Seals Act, the Public Documents Act, the Reparation Payment Act, the Trading with the Enemy (Transitional Powers) Act, Treaties of Peace Acts, and with the collection and tabling of parliamentary returns. Other legislation imposes incidental duties on the Department. The Secretary of State deals with the organization and administration of the Office of the Custodian of Enemy Property (see the 1945 Year Book, p. 475). Statistics regarding patents and copyrights are given at pp. 867-868 of this volume.

---

\* Revised under the direction of the Under Secretary of State, Department of the Secretary of State.

**Incorporation of Federal Companies.**—Statistics of companies incorporated under the Companies Act are given in Table 6.

**6.—Numbers and Capitalizations of Companies Incorporated under the Dominion Companies Act and Amendments, Years Ended Mar. 31, 1942-49**

NOTE.—Statistics for the years 1900-25 will be found at p. 1061 of the 1938 Year Book and for 1926-41 at p. 934 of the 1942 edition. Capitalization includes consideration of the amounts of capital received on the issue of shares without nominal or par value.

Year	New Companies		Old Companies with—				Gross Increase in Capitalization	Net Increase in Capitalization
			Increased Capitalization		Decreased Capitalization			
	No.	Capitalization	No.	Amount	No.	Amount

During the year ended Mar. 31, 1949, 165 Supplementary Letters Patent were granted for variation of corporate powers, changes of name, confirmation of compromises or arrangements with shareholders and for various other purposes. In addition to the companies with share capital, 40 corporations without share capital were granted Letters Patent under Part II of the Companies Act, 1934.

**Citizenship.**—The material on citizenship appearing in past editions of the Year Book as a Subsection of this Section will be found in Chapter V, pp. 155-162. Since early in 1950, the new Department of Citizenship and Immigration has taken over responsibility for the field of federal administration.

### Section 4.—The Civil Service of Canada\*

In the widest sense the Federal Civil Service comprises all servants of the Crown—other than those holding political or judicial office—who are employed in a civil capacity and whose remuneration is paid wholly and directly from moneys voted by Parliament. Collectively, they form the staffs of the various departments, commissions, boards, bureaus, and other agencies of the Federal Government. Nearly every category of occupation is represented in the Civil Service, and personnel are further differentiated in terms of the authority under which appointments are made. A few civil servants are appointed by either or both Houses of Parliament directly, a number by departments and other agencies in accordance with the provisions of certain statutes, generally with executive approval of the Governor in Council, and the remainder—by far the majority—are selected and appointed by the Civil Service Commission.

\* Except as otherwise indicated, material in this Section has been prepared by R. Morgan, Secretary, Civil Service Commission, Ottawa.

As the central personnel agency of the Federal Government, the Civil Service Commission is the custodian of the "merit principle" in respect of both initial appointments and promotions. The steps by which the Commission, in its present form, came to be constituted is the record of Civil Service reform in Canada which began a year after Confederation and culminated in the passing of the Civil Service Act of 1918. Successive Royal Commissions deliberated on the problem of creating an effective and efficient working force and from their findings and recommendations emerged the concept of a quasi-judicial body, with a large measure of autonomy and with jurisdiction over nearly the whole of the public service.

**Recruitment.**—The recruitment of civil servants is conducted by means of open competitive examination. During the past 32 years nearly 1,250,000 applicants for Civil Service posts have been examined by the Commission. By virtue of the competitive system, every citizen has the right to compete for positions in the service of his country, and 'the best qualified shall serve the State'.

Examinations are held periodically as the staff requirements of the public service dictate. Positions located across the country are treated in the same manner as positions at Ottawa, but applicants for local positions must be bona fide residents of the locality in which the vacancy occurs, whereas any Canadian citizen is entitled to apply for positions open at Ottawa. Competitive examinations are announced through the press and through posters displayed on the public notice boards of post offices, offices of the National Employment Service, offices of the Civil Service Commission, public libraries and elsewhere.

Except where otherwise expressly provided, all appointments to the Civil Service are upon competitive examination. The examinations may be written, oral, a demonstration of skill, or any combination of these. They are of such a character as to test fairly and determine the relative fitness and ability of candidates to perform the duties of the classes to which they seek appointment. The Commission is free to employ any investigation of the applicants' training and experience, and any test of knowledge, manual skill or physical fitness that will contribute to the assessment.

The names of persons successful in Civil Service examinations, arranged in order of rank, are recorded on eligible lists. Examination results are formally announced by publication in the *Canada Gazette* and each candidate—successful or unsuccessful—is advised of his standing. As required, appointments are made from the eligible lists, which usually remain valid for one year.

The statutory preference that existed for veterans of the First World War was extended to veterans of the Second World War and proved to be a major factor in occupational rehabilitation. During the past 32 years, upwards of 100,000 veterans have been appointed to the public service, over 55,000 of whom were appointed within the past six years. The 100,000 figure includes 10,000 disabled veterans who were accorded an additional preference in appointment.

In recent years, the Civil Service Commission has decentralized its operations and now has ten district offices and four sub-offices across the country. The Commission is granting an increasing measure of autonomy and responsibility to these offices to permit more efficient service to field agencies. They now conduct certain examinations that qualify for permanent as well as temporary employment.

In order to attract a fair share of outstanding university graduates to the public service, the Commission began, in 1946, an active program to enlist university support. Officers of the Commission visited the universities and colleges to explain

Civil Service needs and requirements and the opportunities available to the better students. The Commission has also assisted the universities by preparing booklets which describe the opportunities and benefits of employment in the public service. As a result of the program, the public service is attracting an ever increasing percentage of the most able university graduates. A more limited but somewhat similar program has started in the high schools and is expected to produce commensurate dividends.

**Staff Training.**—The day of the unskilled amateur in public administration is over and the Commission, in 1947, set up a Staff Training Division to promote and guide a systematic service-wide training scheme. This followed upon and supplanted a more modified training program carried out by the Department of Labour in the three preceding years. The program has expanded rapidly and has proved to be a great help in promoting efficiency.

The training scheme, sponsored by the Commission, is a joint venture undertaken in co-operation with Federal Government departments, most of which have parallel training divisions. The Commission's Training Division is, primarily, a co-ordinating agent. It promotes and organizes activities, trains departmental instructors in the presentation of courses, prepares and, in some cases, gives courses of general application to all departments, publishes booklets and other training aids, assists departments in developing training to meet specialized needs, and acts as a general clearing-house for the exchange of information on training matters. It also co-ordinates the purchase and distribution of training films and advises departments on the organization, staffing and administration of training divisions.

**Promotion and Transfer.**—It is a prime object of the Civil Service Act to create a career service. The result is that promotion, like entrance, is based on merit and a sound promotion system is developing. The Act provides that vacancies shall be filled, in so far as it is practicable to do so, by promotion, which shall be made for merit by the Commission upon such examinations, reports, tests, records, ratings or recommendations as the Commission may by regulation prescribe. The present procedure involves the consideration of three factors: seniority or length of service; efficiency of candidates in their present positions; and fitness for the vacant positions. These factors usually carry weights of 2, 3 and 5, respectively, so it follows that fitness for the vacant position is, as it should be, the main determinant. An automatic rating on seniority is given by the Commission and ratings on efficiency and fitness are provided by the Department concerned. Adequate appeal machinery, under Commission jurisdiction, has been set up for those employees who feel that their qualifications have not been properly assessed.

Latterly, the Commission has been reviewing its promotion techniques and is gradually introducing a number of improvements. This is expected to lead (1) to improvement in the rating techniques used in inter-departmental and intra-departmental competitions with the consequent likelihood that employees in various departments will be rated on a more uniform basis, (2) to the establishment of fields of competition that will offer all employees in particular classes more equal opportunity for advancement, (3) to the elimination of artificial barriers to promotion such as dead-end jobs, etc., and (4) to an increase in intra-departmental and inter-departmental transfers so that promising employees may gain the experience needed for later advancement. In 1950 the number of promotion competitions stood at the highest point in history. The time needed to process such competitions has been reduced appreciably.

Transfers from one position to another carrying the same or a lower maximum salary rate and having approximately the same qualifications may be undertaken on the initiative of the departments. The Commission, however, is required to pass upon certain transfers involving higher compensation or change of duties. This is done to ensure that the employee concerned is qualified for the work to which it is proposed to transfer him. Transfers take place both within and between departments.

**Position Classification and Compensation.**—Provision is made in the Civil Service Act for the classifying of positions in the public service. A system of position-classification was instituted in 1919 and all positions with like duties and responsibilities were classified alike and remunerated equally. Each position has a title, a set of tasks or duties which are proper to it in the organization in which it occurs, and, arising out of these duties, a set of qualifications appropriate for their performance. Positions with duties of similar kind are grouped together under a common title to form a class, and grades within the class reflect the level of responsibility. All positions in the public service have been classified in this manner and, as each new post is created, it is similarly treated. Through the years classification has been extensively revised, many new classes added and others discontinued as the administrative programs and practices of Federal Government departments have evolved.

The determination of rates of compensation for each class is a continuing responsibility of the Commission and salary and wage surveys are conducted constantly. Position classification is a mainspring in the Commission's primary function of recruitment, involving the fixing of standards of qualification for each class of position. The classification structure has been simplified in the last few years by a substantial reduction in the number of position-classes and a thorough overhaul of the wage pattern. The Commission has recommended a number of service-wide salary adjustments that have tended to keep the public service abreast of changing economic conditions.

**Organization and Methods.**—Under the terms of the Civil Service Act, the Commission is made responsible for investigating and reporting to the Governor in Council on all matters affecting the organization of departments. In this respect the Commission acts as agent for the executive arm of Government which maintains a constant check on the growth of establishments. In addition to the annual scrutiny of estimates by Parliament, departments are required to submit for approval all projected staff increases before engaging additional personnel. Under established financial practice, authority to release the funds required to meet such commitments is retained by the Governor in Council. Since the administrative machinery must frequently be adjusted, quantitatively and qualitatively, to meet changing conditions, the Commission is continuously engaged in the study of staffing problems throughout the public service.

In recent years there has been an increasing awareness of the extent to which economical administration depends on the adoption of modern management techniques and devices. In recognition of this the Commission set up, in 1948, an Organization and Methods Division to study problems of management in collaboration with officials directly responsible for major areas of administration. Briefly, this Division affords practical assistance to departments and other agencies of the Government through the systematic examination of the structure and operations,

procedures and work methods, of the various branches, divisions and sections, and engages in such related studies as will contribute to the progressive improvement of public management as a whole. Its growing facilities are offered, free of charge, to all departments. The Division has helped to bring about substantial reductions in the costs of administration and, at the same time, helped to introduce administrative improvements that have led to significant increases in departmental effectiveness.

**Civil Service Statistics.\***—Since April, 1924, a monthly return of personnel and salaries has been made by each department of the Federal Government to the Dominion Bureau of Statistics, according to a plan that ensures comparability between departments and continuity in point of time. The institution of this system was preceded by an investigation covering all years following 1912.

From 1914 to 1920, the number of employees increased very rapidly as a result of the extension of the functions of government and of the imposition of new taxes which necessitated additional officials as collectors. New services, such as the Department of Pensions and National Health and the Soldier Settlement Board, were also created during this period. In January, 1920, 47,133 persons were employed; this number was the highest reached prior to January, 1940, when employees numbered 49,739.

Between March, 1939, and March, 1950, there was an increase of 81,090 in the total number of permanent and temporary employees. The bulk of this increase was accounted for as follows: Department of National Defence, 19 p.c.; Department of National Revenue, 14 p.c.; Post Office Department, 8 p.c.; Comptroller of Treasury, 4 p.c.; Department of Transport, 5 p.c.; Department of Agriculture, 4 p.c.; Public Works Department, 3 p.c.; Unemployment Insurance Commission, 9 p.c.; and 16 p.c. in Veterans Affairs including the Soldier Settlement Board.

In March, 1950, the number of permanent employees represented 36 p.c. of the total number of civil servants as compared with 70 p.c. of the total in March, 1939, and 66 p.c. of the total in March, 1925. Similarly, temporary employees represented 64 p.c. of the total as compared with 30 p.c. of the total in March, 1939, and 34 p.c. of the total in March, 1925, the first year for which these statistics were published.

\* Revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

### Section 5.—Supervision of Race-Track Betting

The supervision of race-track betting, under the pari-mutuel system, has been under the jurisdiction of the Minister of Agriculture since it first operated during the racing season of 1921. The actual supervision is carried out by officers of the Royal Canadian Mounted Police. Table 14 brings the data up to the year 1950.

#### 14.—Race-Track Betting in Canada, Years Ended Mar. 31, 1939-50, and by Provinces, 1949 and 1950

NOTE.—Figures for the years 1924-38 are given at p. 1076 of the 1940 Year Book.

# CHAPTER XXX.—SOURCES OF OFFICIAL STATISTICAL AND OTHER INFORMATION RELATIVE TO CANADA

## CONSPECTUS

	PAGE		PAGE
SECTION 1. SOURCES OF FEDERAL GOVERNMENT INFORMATION.....	1147	SECTION 3. ACTS ADMINISTERED BY FEDERAL DEPARTMENTS.....	1175
SECTION 2. DIRECTORY OF SOURCES OF OFFICIAL INFORMATION FOR ALL DEPARTMENTS (FEDERAL AND PROVINCIAL). ..	1150	SECTION 4. FEDERAL AND PROVINCIAL ROYAL COMMISSIONS.....	1180

### Section 1.—Sources of Federal Government Information\*

The chief source of statistical information on all phases of the economy of Canada is the Dominion Bureau of Statistics where the decennial and quinquennial censuses are planned and statistical information of all kinds—federal and provincial—is centralized. In regard to information that is not mainly statistical, the individual Departments concerned with the particular subject, as indicated in the Directory at pp. 1152-1174, should be approached. Certain Government bodies and national agencies, because of the nature of their work and the appeal it has to broad sections of the population, are organized primarily as information or publicity agencies. Among these are: the Information Division, Department of External Affairs, which deals with questions about external affairs originating in Canada and with general requests for information on Canada and Canadian affairs, originating abroad; the Publicity Division, Department of Trade and Commerce; the Information Services Division, Department of National Health and Welfare; the Canadian Broadcasting Corporation; and the National Film Board. The Departments of Agriculture, Resources and Development and Mines and Technical Surveys, while not thus classed, are interested in the dissemination of information to a greater extent than most other Government Departments, and several other Departments have Publicity Branches or Public Relations Divisions.

Government Departments, with few exceptions, issue their own lists of reports and publications. They must, according to statute, publish annual reports which are tabled each year in the House of Commons by their respective Ministers. However, for the purpose of this Section, only the services of the six information agencies mentioned above are described. Section 2, on the other hand, has been prepared with the purpose of presenting to the reader a directory of all sources of information, federal and provincial, and thereby directing the reader who is not in touch with governmental organization to the proper channels from which he can draw material relating to any particular subject.

**The Dominion Bureau of Statistics.**—The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (8-9 Geo. V, c. 43). In 1948, this statute, which had been consolidated as the Statistics Act (R.S.C. 1927, c. 190), was repealed and replaced by the Statistics Act (11-12 Geo. VI, c. 45).

\*Revised in the Divisions mentioned in the text of this Section.

The chief aims of the Dominion Bureau of Statistics are: (1) to furnish factual data for administration and government; (2) to assist in developing Canada as a well-informed nation by standing ready to help business men and individuals to plan their enterprises and their lives.

*Inquiries.*—Hundreds of individual requests for information are received in the Bureau each day, routed through the appropriate divisions and answered as expeditiously as possible. Since the field of effort, from the statistical side, deals with all phases of the national economy, there is scarcely a subject upon which the Bureau is not able to give some information. Nevertheless, only inquiries of a statistical nature should be directed to the Dominion Bureau of Statistics.

*Publications.*—The Dominion Bureau of Statistics is the largest publishing Department of the Federal Government: the subjects of its reports cover all aspects of the national economy.

The policy with regard to the distribution of publications is to extend the service to the public as widely as possible at a minimum cost. A special subscription rate of \$30 per annum entitles the subscriber to receive a copy of each publication, including the daily News Bulletin, as issued. Statistical information not of general interest is published as Reference Papers or Memoranda and an additional subscription rate of \$10 is made for each category: this entitles the subscriber to receive all issues in each class. A discount of 25 p.c. is allowed on the excess over \$5 of single purchases totalling between \$5 and \$20: on single purchases of between \$20 and \$50 the discount is 50 p.c. of the excess over \$20.

A complete list of Bureau publications is available from the Dominion Statistician. Orders for reports should be sent to the Dominion Bureau of Statistics, Ottawa, and should give the correct title or titles of the publication or series of reports in which the applicant is interested and include the necessary remittance in the form of a cheque or money-order made payable to the Receiver General of Canada.

**Information Division, Department of External Affairs.**—The Information Division has two functions: to promote within Canada interest in and knowledge of international affairs, and to make Canada and Canadian policies better known and understood abroad.

To perform the first function, the Division produces and distributes various documents on external affairs—statements of government policy and reports on related developments abroad and on the work of the Department generally. The Division also answers routine inquiries from Canadian sources on these subjects, as well as requests for information about Canada made by Diplomatic Missions at Ottawa, by Canadian posts abroad, and by individuals and organizations in other countries.

Most of the information work abroad is done, however, by heads of Canadian posts and their staffs. These the Information Division assists by formulating and advising on information policy abroad, in an effort to ensure that this policy is related to the general objectives of Canadian foreign policy, and by producing and procuring material to keep Missions informed of developments within Canada. Journalists and others who visit Canada to write about it are from time to time given non-financial assistance by the Division; its responsibilities also include the co-ordination of the Government's activities in the field of cultural relations.

**Information Division, Department of Trade and Commerce.**—Information, pertaining specifically to trade, is obtainable from this Division, which maintains close liaison with all Branches and Divisions of the Department and with a number of Crown companies. It is responsible for the production of "Foreign Trade" and "Commerce Extérieur", the weekly publications of the Foreign Trade Service, and for the preparation of brochures, some of which are required for distribution at trade fairs in other countries. Information is made available to Canadian Trade Commissioners for distribution within their respective territories, including the provision of motion picture films. The Division is closely identified with the Canadian International Trade Fair, although promotional literature is distributed directly from the headquarters of that organization at Toronto.

**Information Services Division, Department of National Health and Welfare.**—The responsibility of this Division, in co-operation with other divisions of the Department of National Health and Welfare and provincial authorities, is the production and distribution of educational materials on health, welfare and social security, for use in Canada and abroad. These materials, issued in both English and French, include books, pamphlets, periodicals, posters, exhibits, displays, radio dramatizations and press and magazine features and releases, as well as films and film-strips prepared in co-operation with the National Film Board. With the exception of periodicals, these are distributed in Canada through provincial authorities. Distribution to other countries is mainly through the Department of External Affairs or, if in quantity, the King's Printer. The most important periodicals published by the Division are "Canada's Health and Welfare" (monthly), "Canadian Nutrition Notes" (monthly), "Industrial Health Bulletin" (monthly), "Industrial Health Review" (twice yearly) and "Nutrition Bulletin" (annually).

**Canadian Broadcasting Corporation.**—Radio broadcasting is an important means of giving information to the public along with newspapers, films and other means of communication. Radio broadcasting in Canada is a combination of a publicly owned national system and privately owned local community stations, many of which are affiliated with the Canadian Broadcasting Corporation's networks.

Since its establishment in 1936, the Canadian Broadcasting Corporation has become one of the most effective channels through which information, official and unofficial, is broadcast to the Canadian people. Radio is relatively more important in Canada than in most other countries, because of the widely distributed population and the number of sparsely peopled areas, and the CBC has gradually bridged the gaps with high-powered transmitters designed to serve rural as well as urban areas. It has also pioneered in the development of low-powered repeater stations attached to the network lines, which serve areas unable, because of topographical conditions, to receive an adequate signal from any existing station.

News broadcasts and information programs occupy a considerable proportion of national and regional network time. These include news, drama, informative talks, children's programs, school broadcasts, public-service broadcasts, sports, women's activities, etc. Canadian listeners have a very wide range of radio fare, since the CBC not only produces its own programs in the various production centres across Canada, but brings in selected programs from the networks in the United States, the British Broadcasting Corporation, and other national radio systems. The CBC maintains a bureau at London, England, and at United Nations Headquarters, and is credited with having done more to inform its listeners of United Nations activities than any other broadcasting system.

Through the International Shortwave Service operated by the CBC on behalf of the Federal Government, programs are broadcast in thirteen languages: English, French, Czech, German, Dutch, Norwegian, Danish, Swedish, Finnish, Italian, Russian, Portuguese and Spanish. Through the activities of the CBC International Service, information on life in Canada and on economic conditions is broadcast abroad as part of the general information plan for promoting a better understanding of Canada in other countries. Since the CBC shortwave transmitters at Sackville, N.B., have the strongest signal reaching Europe from this side of the Atlantic, the transmitters are made available to United Nations radio, free of charge, for regular transmissions.

**The National Film Board.**—The National Film Board produces and distributes films, filmstrips, photographs and other visual material about Canada, its physical appearance, resources, industries, and the life and character of its people. (For details of subjects covered see pp. 1152-1174.) There are on file about 2,500 NFB films including English, French and foreign language versions, about 150 filmstrips and about 60,000 still pictures. A large preview library of films selected from other Canadian and foreign sources is maintained for the use of Government Departments and other official bodies.

The Film Production Branch has all the technical facilities needed for the complete production of films, filmstrips and still pictures. About 175 films and about 60 filmstrips are made each year through the sponsorship of Government Departments or from the Board's own production appropriation. About 7,000 still photographs are added yearly to the Board's photo library.

In Canada, non-theatrical (16 mm) films are distributed by the National Film Board's distribution branch through regional offices in each province, while theatrical (35 mm) films are released in English and French through theatres to commercial distributors. Non-theatrical films are available to most communities in Canada largely through some 300 community film libraries and through locally organized film circuits. Distribution in each community is usually organized by a film council representing the various community groups using films. Communities are assisted in applying films to educational programs by provincial educational agencies.

Abroad, the Board's productions reach some 60 countries. NFB offices are maintained at New York, Chicago and London, while in other places throughout the world, Canadian diplomatic and trade posts distribute Canadian films through their film libraries. Other distribution channels abroad are newsreel companies, television stations, commercial theatres, government agencies, non-theatrical film libraries and community organizations.

In the United States the Board and the Canadian Government Travel Bureau have established 64 travel film libraries in 34 States.

## **Section 2.—Directory of Sources of Official Information for All Departments (Federal and Provincial)**

To make best use of the Directory, it is necessary that the reader understands broadly the differences in function between federal and provincial departments and their separate fields of work.

Certain fields of effort, such as trade and commerce, customs and excise, currency and banking, navigation, transportation, radio, census of population, national defence, etc., are constitutionally federal matters and in such fields the respective Departments at Ottawa are the proper sources with which to communicate. While other fields of effort, such as the administration of lands and natural resources, education, roads and highways, and health and hospitals, are the responsibility

of the provinces under the British North America Act, certain Federal Departments are also concerned with specific aspects of these subjects and, as is the case with the Dominion Bureau of Statistics, in co-ordinating and presenting the material for Canada as a whole.

As a general guide to the public, it may be pointed out that questions relating to the actual development and administration of resources should be forwarded to the particular provinces concerned. The Federal Government, while not administering the resources within provincial boundaries, co-operates closely with the provinces and is in a position to furnish material for Canada, especially production data, on a national basis, marketing data on international, national and provincial bases, research work and experimental station data on a national basis, and also on a provincial basis from Federal Government stations located within particular provinces. In agriculture, for instance, data on the breeding of live stock and the improvement of strains, on agricultural marketing and crop yields are cases in point—in forestry, questions of forest research, forest fire protection and reforestation offer good examples. Where inquiries are directed to federal sources, they should, as a general rule, be sent to the individual departments listed in the Directory for information not of a statistical nature but, whatever the subject, where the information required is clearly statistical, they should be addressed to the Dominion Bureau of Statistics.

Bearing these points in mind, the reader will be able to apply the information given in the Directory to best advantage.

In the Directory, symbols are set against individual sources of information to give special information such as availability of detailed lists of publications, the costs of such lists (in cases where a charge is made), or information of other kinds. All departments, whether federal or provincial, are prepared to furnish information in their respective fields free of charge although, where special compilations are called for, a nominal charge is sometimes made.

The address for all federal departments is Ottawa, Ontario. Inquiries forwarded to provincial departments should be addressed to the provincial capitals concerned:—

Newfoundland.....	St. John's	Ontario.....	Toronto
Prince Edward Island...	Charlottetown	Manitoba.....	Winnipeg
Nova Scotia.....	Halifax	Saskatchewan.....	Regina
New Brunswick.....	Fredericton	Alberta.....	Edmonton
Quebec.....	Quebec	British Columbia.....	Victoria

Inquiries about Yukon and the Northwest Territories should be addressed to Ottawa.

The King's Printer and Controller of Stationery, Ottawa, who is charged under the Public Printing and Stationery Act with responsibility for the sale and distribution of government publications, issues an Official Catalogue and price list of all Federal Government publications printed from type, or by offset. This Catalogue, including the price list, may be obtained on application at 25 cents per copy, is classified on a subject basis and is adequately cross-referenced; it is revised at regular intervals.

The titles of some of the publications offered for sale to the public by the King's Printer and Controller of Stationery at Ottawa or by Provincial King's Printers may also be found in lists of reports, mimeographed or produced on duplicating machines, released by federal or provincial departments and obtainable from these sources free of charge.

# DIRECTORY OF SOURCES OF OFFICIAL INFORMATION

▲ Most publications of federal departments printed from type are purchasable from the King's Printer who publishes a current list. Films, filmstrips and photographs may be purchased from the National Film Board at prices obtainable on application. Most Provincial Government printed publications may be obtained from the King's Printers of the provinces. For addresses of Provincial Governments see text immediately preceding this Directory.

- Near-printed and mimeographed reports free or purchasable from this department or branch; particulars on application.
- Directory of departmental organizations and activities available from the federal or provincial department on request.
- List of publications available free of charge on request from federal or provincial departments concerned. (In the case of the federal Labour Department a list of publications is given in the *Labour Gazette*.)

## Section 2.—Federal Legislation

Legislation of the First Session of the Twenty-first Parliament,  
Sept. 15, 1949, to Dec. 10, 1949

NOTE.—This classified list of Federal Legislation has been compiled from the Statutes. Naturally in summarizing material of this kind it is not always easy to convey the full implication of the legislation. The reader who is interested in any specific Act is therefore referred to the Statutes themselves. Adequate references are given in this summary.

Subject, Chapter and Date of Assent	Synopsis
13 George VI.	
<b>Agriculture—</b>	
6 Dec. 10	<i>An Act to Amend the Animal Contagious Diseases Act</i> provides for compensation in respect of cattle slaughtered under the <i>Animal Contagious Diseases Act</i> after Mar. 31, 1947, and before the present Act comes into force.
28 Dec. 10	<i>The Live Stock Pedigree Act, 1949</i> , provides for the incorporation of Pure Bred Live Stock Record Associations.
34 Dec. 10	<i>An Act to Amend The Prairie Farm Assistance Act, 1939</i> . This amendment revises that Section of the Act defining the lands that are eligible or ineligible for awards under the Prairie Farm Assistance Act.
<b>Citizenship—</b>	
16 Dec. 10	<i>The Department of Citizenship and Immigration Act</i> . The Act establishes the Department of Citizenship and Immigration under the management and direction of the Minister of the Department whose duties, powers and functions shall extend to all matters relating to naturalization and citizenship, Indian affairs, immigration and colonization not by law assigned to any other Department of the Government of Canada.
<b>Construction—</b>	
30 Dec. 10	<i>An Act to Amend The National Housing Act, 1944</i> , grants additional loans by the Central Mortgage and Housing Corporation to home owners or home purchasers, and to co-operative associations. The powers of the Corporation are revised in several particulars especially in regard to loans, the payment of losses and the undertaking of joint projects with the provinces.
<b>Finance and Taxation—</b>	
1 Sept. 29	<i>The Appropriation Act, No. 5, 1949</i> , grants payment of \$114,516,603 and \$2,613,651 to be paid out of the Consolidated Revenue Fund towards defraying charges and expenses of the public service.
3 Oct., 27	<i>The Appropriation Act, No. 6, 1949</i> , grants payment of \$114,516,803.83 and \$5,012,437.50 to be paid out of the Consolidated Revenue Fund towards defraying charges and expenses of the public service.
19 Dec. 10	<i>An Act to Amend The Dominion-Provincial Tax Rental Agreements Act, 1947</i> . The amendments made by this legislation govern the taxes to be paid on and procedure to be taken in the distribution or generation for distribution of electric energy, gas or steam by a corporation or a controlling corporation.
21 Dec. 10	<i>An Act to Amend the Excise Tax Act</i> . This amendment repeals Parts IV, V and XVII and Schedules I and VI and substitutes a new Schedule I.
25 Dec. 10	<i>An Act to Amend The Income Tax Act and the Income War Tax Act</i> . The amendment makes numerous revisions concerning taxes on depreciable property, deductions of employers and employees and of corporations in the petroleum business, and in the rules applicable in Part I to Newfoundland.
33 Dec. 10	<i>An Act to Amend the Pension Fund Societies Act</i> grants that a subsidiary corporation society fund may, at the request of a parent corporation, be established and be authorized to contribute annually or otherwise to the funds of the Society.
42 Dec. 10	<i>The Appropriation Act, No. 7, 1949</i> , grants payment of \$440,983,724, \$7,485,774 and \$56,546,333 out of the Consolidated Revenue Fund toward defraying the charges and expenses of the public service from Apr. 1, 1949, to Mar. 31, 1950.
<b>Fisheries—</b>	
23 Dec. 10	<i>The Fish Inspection Act, 1949</i> , provides legislation for the inspection of fish and marine plants.

**Legislation of the First Session of the Twenty-first Parliament,  
Sept. 15, 1949, to Dec. 10, 1949—continued**

Subject, Chapter and Date of Assent	Synopsis
<b>Justice—</b>	
2 Sept. 29	<i>An Act to Amend the Criminal Code</i> makes revision for the Court of Appeal in certain provinces.
4 Oct. 27	<i>An Act to Amend the Department of Justice Act</i> authorizes the Deputy Minister of Justice to be <i>ex officio</i> the Deputy Attorney General.
5 Oct. 27	<i>An Act to Amend the Exchequer Act.</i> This amendment substitutes new Sections for Section 18 and Section 82 of the original legislation.
13 Dec. 10	<i>An Act to Amend the Criminal Code.</i> This amendment revises offences and penalties concerning printing, etc., obscene written matter, crime comics, exhibiting any disgusting object or the public exhibition of an indecent show.
27 Dec. 10	<i>An Act to Amend The Judges Act, 1946.</i> This legislature revises the salaries of Judges of the Supreme Court of Canada and of the Supreme Court of Ontario.
37 Dec. 10	<i>An Act to Amend the Supreme Court Act.</i> The amendment concerns the constitution of the Supreme Court and the Court of King's Bench, and deals with Supreme Court appeals.
<b>Labour—</b>	
24 Dec. 10	<i>An Act to Amend The Government Employees Compensation Act.</i> This amendment repeals Section 4, c. 18, of the Statutes of 1947.
<b>Mines and Resources—</b>	
8 Dec. 10	<i>The Canadian Forestry Act</i> provides for the establishment as National Forests or Forest Experimental areas of lands belonging to the Government of Canada. It provides also for forest products laboratories, with a view to conservation and the advantageous utilization of the forest resources.
17 Dec. 10	<i>The Department of Mines and Technical Surveys Act</i> authorizes the establishment of that Department and defines the duties, powers and functions of the Minister of Mines and Technical Surveys.
18 Dec. 10	<i>The Department of Resources and Development Act</i> authorizes the establishment of the Department of Resources and Development under the direction of a Minister of Resources and Development.
20 Dec. 10	<i>An Act to Amend The Emergency Gold Mining Assistance Act</i> amends the Sections in regard to minimum assistance on gold production and the method of calculating the sum to be paid.
29 Dec. 10	<i>The Maritime Coal Production Assistance Act</i> provides legislation to assist producers of coal in the Atlantic Maritime Provinces.
<b>Trade and Com- merce—</b>	
7 Oct. 27	<i>Bankruptcy Act, 1949,</i> replaces the <i>Bankruptcy Act</i> , c. 11, R.S. 1927, and amendments.
12 Dec. 10	<i>An Act to Amend the Combines Investigation Act</i> revises the Section empowering the Attorney General of Canada to institute and conduct prosecutions under this Act and enacts that corporations charged under this Act shall be tried without a jury.
14 Dec. 10	<i>An Act to Amend the Customs Act.</i> This amendment provides that the Governor in Council may order import duties of a country of export to be disregarded in whole or in part in estimating value for duty of imported goods.
15 Dec. 10	<i>An Act to Amend the Customs Tariff.</i> This legislation authorizes the repeal of items 1215 and 1216 of c. 29, R.S. 1927, and substitutes 1215 and 1216 items concerning second-hand motor-vehicles, automobiles, aeroplanes and aircraft of all kinds.
22 Dec. 10	<i>An Act to Amend The Export and Import Permits Act</i> advances the date of expiry of the Act to July 31, 1951.
31 Dec. 10	<i>The National Trade Mark and True Labelling Act</i> authorizes the application of the initials "C.S.", as a national trade mark on commodities. The right to use the trade mark is vested in His Majesty in the right of Canada. This Act repeals <i>The Dominion Trade and Industry Commission Act, 1935.</i>

**Legislation of the First Session of the Twenty-first Parliament,  
Sept. 15, 1949, to Dec. 10, 1949—concluded**

Subject, Chapter and Date of Assent	Synopsis
<b>Transportation and Communi- cations—</b>	
9 Dec. 10	<i>Canadian National Railway Financing and Guarantee Act, 1949</i> , authorizes the provision of moneys to meet certain capital expenditures and indebtedness incurred in 1949 by the Canadian National Railways System and authorizes the guarantee of certain securities issued by the Canadian National Company.
10 Dec. 10	<i>The Canadian Overseas Telecommunication Corporation Act</i> authorizes the establishment of the Canadian Overseas Telecommunication Corporation.
11 Dec. 10	<i>The Canadian Vessel Construction Assistance Act</i> encourages construction and conversion of vessels in Canada by providing certain deductions from income tax in respect of capital cost of construction, conversions or major alterations.
32 Dec. 10	<i>The Pacific Great Eastern Railway Aid Act</i> authorizes the granting of a specified subsidy to the Government of the Province of British Columbia for the construction of an extension of not exceeding 82½ miles to the Pacific Great Eastern Railway.
39 Dec. 10	<i>An Act respecting the Acquisition of the Temiscouata Railway.</i> This legislation ratifies, approves and sanctions the agreement with the Temiscouata Railway Company for the acquisition of that Railway by the Government of Canada for \$480,000.
40 Dec. 10	<i>The Trans-Canada Highway Act.</i> This legislation provides for agreement with any of the Provinces for assistance by the Government of Canada amounting to not more than 50 p.c. of the cost of construction of the Highway in each Province.
<b>Miscellaneous—</b>	
26 Dec. 10	<i>An Act to Amend The Industrial Development Bank Act</i> revises the limitation on commitments of the Bank, adds to the grounds on which proceedings that may be brought against or taken in the name of the Bank, and revises the powers of the Bank in regard to loans, investments and guarantees.
35 Dec. 10	<i>An Act to Amend the Royal Canadian Mounted Police Act</i> permits refunds to be made under certain conditions of excess service above the maximum that may be allowed in case of prior service in a Provincial Police Force for the computing of pension.
36 Dec. 10	<i>An Act to Amend the Salaries Act.</i> This legislation repeals salaries of certain Ministers and substitutes a salary of \$10,000 to each of the following: the Minister of Resources and Development, the Minister of Mines and Technical Surveys and the Minister of Citizenship and Immigration.
38 Dec. 10	<i>An Act to Amend The Surplus Crown Assets Act</i> authorizes Departments of Government to dispose of surplus Crown assets, subject to certain conditions, and approves the transfer of surpluses from one Department to another subject to certain terms and conditions.
41 Dec. 10	<i>An Act to Amend the Veterans' Land Act, 1942</i> , revises the conditions under which a Director may sell property to a veteran and the manner of applying the proceeds.

**Legislation of the Second Session of the Twenty-first Parliament,  
Feb. 16, 1950, to June 30, 1950**

Subject, Chapter and Date of Assent	Synopsis
14 George VI.	
<b>Agriculture—</b>	
4 Mar. 30	<i>An Act to Amend the Agricultural Prices Support Act, 1944.</i> By this amendment Section 9, c. 29, 1944-45, of this Act is continued in force after Mar. 31, 1950.
5 Mar. 30	<i>An Act to Amend the Agricultural Products Act</i> advances the date of expiry of the Act to Mar. 31, 1951.
10 June 1	<i>An Act to Amend the Cold Storage Act.</i> This amendment repeals Part II, c. 25, of the Cold Storage Act.

54 June 30	<i>An Act to Amend The War Veterans' Allowance Act, 1948.</i> This amendment includes Newfoundland veterans in the <i>War Veterans' Allowances Act</i> as amended in 1947-48.
<b>Trade and Commerce—</b> 13 June 1	<i>An Act to Amend the Customs Act.</i> This legislation makes certain amendments respecting procedure and practice in appeals from decisions to the Tariff Board.
14 June 1	<i>An Act to Amend the Customs Tariff.</i> This amendment authorizes the abolition of certain tariff items but is not to be construed as adding or subtracting lists of goods in the Schedules to <i>The Emergency Exchange Conservation Act</i> or <i>The Customs Tariff Amendment Act, 1939</i> .
15 June 1	<i>An Act to Amend the Excise Tax Act.</i> This amendment repeals Part I of the Act and makes other changes in exemptions and exceptions of the tax on certain goods.
52 June 30	<i>An Act to Amend the Tariff Board Act.</i> Section 5 of the <i>Tariff Board Act</i> is amended to apply in certain respects to appeals under other Acts.
<b>Transportation and Communi- cations—</b> 9 June 1	<i>An Act respecting the Appointment of Auditors for National Railways</i> authorizes for 1950 the appointment of independent auditors to make a continuous audit of the National Railways accounts.

**Legislation of the Second Session of the Twenty-first Parliament,  
Feb. 16, 1950, to June 30, 1950—continued**

Subject, Chapter and Date of Assent	Synopsis
<b>Transportation and Communi- cations—concl.</b>	
20 June 1	<i>An Act to Amend the Railway Act.</i> This amendment provides for apportionment of money for the construction work of highway crossings of railways.
23 June 30	<i>An Act to Amend the Aeronautics Act.</i> This amendment revises the powers of the Minister to make and carry out regulations to control and regulate air navigation over Canada and amends the jurisdiction of the Air Transport Board on routes and conditions, licences and operating certificates.
26 June 30	<i>An Act to Amend the Canada Shipping Act, 1934.</i> Additional regulations to the Shipping Act are added and numerous amendments are made to the requirements for radio communications, safety, certification, registration of ships, pilots and pilot funds. Schedule 4 is repealed and a new Schedule is substituted.
30 June 30	<i>Canadian National Railways Financing and Guarantee Act, 1950.</i> This legislation authorizes the provision of moneys to meet certain capital expenditures and indebtedness during 1950 of the Canadian National Railways System and authorizes the guarantee of certain securities issued by the Canadian National Railway Company.
56 June 1	<i>An Act respecting the Purchase by Canadian Pacific Railway Company of Shares of the Capital Stock of The Shawinigan Falls Terminal Railway Company.</i> The Act provides for the purchase of one thousand five hundred shares of the capital stock of the above Company.
65 June 1	<i>An Act to incorporate Prairie Transmission Lines Limited.</i> The legislation grants incorporation under the name of Prairie Transmission Lines, Limited, to certain persons named in the Act and to persons who become shareholders in the hereafter called Prairie Transmission Lines Company.
<b>Miscellaneous—</b>	
16 June 1	<i>An Act to Amend The Manitoba Boundaries Extension Act, 1912, and the Ontario Boundaries Extension Act.</i> This amendment clarifies the construction of certain sections of c. 40 of the Statutes of 1912.
18 June 1	<i>An Act to Amend The Precious Metals Marking Act, 1946.</i> This amendment makes provision for revisions in quality markings and unauthorized markings.
21 June 1	<i>An Act to Amend the Research Council Act.</i> This legislation revises the powers of the Council in respect to payments of bonuses and royalties to its scientific and technical officers and staff for inventions or improvements in which the Council has vested rights.
35 June 30	<i>An Act to Amend the Dominion Election Act, 1930,</i> revises the Section entitling an Indian who has served with the Armed Forces in World War I or World War II, to the franchise and also entitles his wife to the franchise.
36 June 30	<i>The Electric and Photometric Units Act.</i> The legislation establishes the units of electrical and photometric measure for Canada, and empowers the National Research Council to maintain standards defined in this Act.
37 June 30	<i>An Act to Amend The Electricity Inspection Act, 1928.</i> This amendment provides for a revision within a certain period in the sealing of meters, verification, re-sealing and re-stamping, cancelling of the stamp or seal by an inspector.
39 June 30	<i>An Act to Amend the Gas Inspections Act.</i> This amendment provides within a certain period for re-verification, re-sealing or for the cancellation of the seal of meters by an inspector.
44 June 30	<i>The National Film Board Act, 1950.</i> This legislation sets forth purposes and powers of the Board and Government Film Commissioners; the responsibility of the Minister; and the financial provisions of the Board.
61 June 1	<i>An Act to incorporate Alberta Natural Gas Company.</i> The Act grants incorporation to the Alberta Natural Gas Company, the persons named in the Act to be the first directors of the Company.
62 June 1	<i>An Act to Amend the Canadian Red Cross Society Act.</i> This legislation revises the Section of the earlier legislation dealing with the limit on the annual value of real estate held in Canada by or in trust for the Society; the strength of the governing Body and the Executive Committee. In the French language the name of the Society is to be 'La Société Canadienne de la Croix-Rouge'.

## APPENDIX I

### Chronology

(In continuance of the Chronology at pp. 46-53 of this volume.)

1950. Aug. 30 (concl.), The Act (see p. 53—Aug. 30) provided that, in the event of the railways and unions not reaching a settlement within a stated time, an official arbitrator was to be appointed by the Government, his decisions to be binding on both. Aug. 31, Railway services resumed. Sept. 6, Enlistments in the Canadian Army Special Force were 8,691. Sept. 11, Field Marshal the Rt. Hon. Jan Christian Smuts, outstanding Commonwealth statesman, died at Capetown, South Africa. Sept. 15, Third (Special) Session of 21st Parliament adjourned. Sept. 18, Minister of National Defence announced that enlistments in Canadian Special Army Force exceeded 9,000. Sept. 19-Dec. 15, Fifth Regular Session of the General Assembly of the United Nations held at Flushing Meadows, New York. Hon. L. B. Pearson, Secretary of State for External Affairs, was Chairman of the Canadian delegation. Sept. 25-28, The Constitutional Conference of Federal and Provincial Governments continued its meetings at Quebec City for the purpose of devising a method of amending the Canadian Constitution. Sept. 30, Minister of Finance, Hon. D. C. Abbott, announced the Government's decision to free the exchange rate of the Canadian dollar. Oct. 4, Opening of Edmonton-Regina section of interprovincial oil pipe line stretching from Edmonton to the Head of the Lakes. Oct. 10, Canada-United States power treaty *re* hydro developments at Niagara Falls ratified after approval by the Canadian Parliament (June 19, 1950) and United States Senate (Aug. 9, 1950). Oct. 11, Enlistments in Canada's Special Army Force were 9,367. Oct. 17, Mr. Justice R. L. Kellock, of the Supreme Court of Canada, appointed as arbitrator to determine and decide all matters between the railways and the unions in regard to remaining differences in matters of wages and hours (see under Aug. 30). Oct. 26, Canada and United States signed an agreement setting out six economic principles for joint defence production which, when developed, will virtually eliminate all barriers to the free flow of arms and equipment between the two countries. Rt. Hon. C. D. Howe signed the agreement for Canada. Oct. 27, Progressive Conservatives ended 10-year coalition with Liberals in Manitoba. Oct. 28, Term of Governor General, Field Marshal the Rt. Hon. Viscount Alexander, extended one year. Oct. 31, Completion of 1,100-mile oil pipe line connecting Edmonton with Great Lakes. Nov. 1, Minister of Finance, Hon. D. C. Abbott, announced restrictions on consumer credit. Nov. 16, Canadian troops, members of Canada's Korean Brigade, arrived at Fort Lewis, Washington, for advanced training. Nov. 21, Westbound troop train collided with C.N.R. Transcontinental at Canoe River, B.C. (21 dead, 53 injured). Nov. 25, The destroyer H.M.C.S. *Nootka* left Halifax for Korea to relieve H.M.C.S. *Sioux*. Nov. 28, "Colombo Plan" to raise the living standards of 570,000,000 Asiatic

peoples and for development of south and southeast Asia during next six years announced; Canada one of the seven participating countries. Dec. 1, Canada's enlistments for the Special Brigade reached a total of 10,357. Dec. 4-7, Federal-Provincial Conference met at Ottawa to discuss general questions of common concern to the Federal and Provincial Governments. Dec. 9, Export permits for shipments to Korea, China, Hong Kong, Macao and Manchuria suspended and all outstanding permits for revalidation recalled. Dec. 9-11, Rt. Hon. Clement R. Attee, Prime Minister of the United Kingdom, visited Ottawa. Dec. 18, Mr. Justice R. L. Kellock, arbitrator in rail-wage dispute, awarded an additional three cents an hour to workers other than hotel and transport employees, and a five-day 40-hour week from June 1, 1951. The 2nd Battalion of the Princess Patricia's Canadian Light Infantry, Canada's contribution to United Nations forces in Korea, landed at Pusan; the first Canadian troops other than advance personnel to arrive in Korea. Dec. 18-19, Joint meetings of the North Atlantic Treaty Defence Committee and Council held at Brussels, Belgium. Hon. Brooke Claxton, Minister of National Defence, was Canada's representative.

1951. Jan. 2, All remaining emergency import controls suspended. Jan. 4-12, Prime Ministers and Leaders of the Commonwealth countries met at London to discuss the defence policy of the Commonwealth. Canada was represented by Prime Minister Rt. Hon. L. S. St. Laurent. Jan. 13, The first group of Royal Air Force aircrew trainees arrived by air at Dorval, Que. Jan. 22, The destroyer H.M.C.S. *Huron* placed under United Nations command. Jan. 26-27, General Dwight D. Eisenhower, Supreme Commander of the North Atlantic Treaty forces, visited Ottawa to discuss with the Canadian Cabinet the general defence problem, on his return to the United States from an inspection of the defences of Europe. Jan. 29, Third (Special) Session of 21st Parliament prorogued. Jan. 30, Fourth Session of 21st Parliament opened. Jan. 30-31, Rt. Hon. S. G. Holland, Prime Minister of New Zealand, visited Ottawa. Jan. 31, Collapse of \$3,000,000 Duplessis Bridge between Three Rivers and Cap de la Madeleine (4 dead). Feb. 2-3, René Pleven, Premier of France, paid an official courtesy visit to Ottawa to confer with Prime Minister St. Laurent on the general European defence situation and the supply of Canadian arms. Feb. 5, A three-year \$5,000,000,000 defence program for the Armed Forces and the establishment of a National Advisory Council on manpower announced. Feb. 19, Canadian Government contribution of \$25,000,000 approved for the first year of the six-year Colombo Plan. Feb. 20, Second Battalion of the Princess Patricia's Canadian Light Infantry in front-line action in Korea.

## APPENDIX II

### The Royal Commission on Arts, Letters and Sciences

As indicated at p. 316 of this volume, it was planned, when the material on the Royal Commission on the Arts, Letters and Sciences was being prepared, to publish a summary of the Report of the Commission in this Appendix. However, since the Report had not been released at the time of closing this edition for press, the summary will be carried in the Education Chapter of the 1952 Year Book.

---

## APPENDIX III

### Foreign Trade of Canada, 1949 and 1950

Chapter XXII of this volume include foreign trade figures for the calendar year 1949. However, at the time of going to press it is possible to give monthly and group figures up to the end of 1950 and these are shown in the following tables. Figures for 1949 are given for purposes of comparison.

#### 1.—Trade of Canada (excluding Gold), by Months, 1949 and 1950

NOTE.—Monthly figures from 1940 to 1948 are given in corresponding tables in previous Year Books beginning with the 1943-44 edition.

Month	Imports		Domestic Exports		Total Trade <sup>1</sup>	
	1949	1950	1949	1950	1949	1950
	\$'000	\$'000	\$'000	\$'000	\$'000	\$'000
January.....	223,786	211,938	237,030	221,180	462,799	435,682
February.....	205,976	200,170	204,994	199,462	413,112	401,716
March.....	235,946	237,366	216,787	228,221	454,952	469,081
April.....	242,698	230,918	237,792	205,503	482,974	440,618

## APPENDIX IV

### Comparative Expenditures for the First and Second World Wars

**First World War.**—For the years ended Mar. 31, 1915 to 1920, direct expenditures on war and demobilization totalled \$1,670,406,000.

**Second World War.**—For the years ended Mar. 31, 1940 to 1945, direct expenditures on war and demobilization amounted to \$14,939,728,000. Expenditures on war, demobilization and reconversion during the years ended Mar. 31, 1946 and 1947 were \$5,317,747,000, making a total expenditure from 1940 to 1947 of \$20,257,475,000. The figures by years are as follows:—

#### War Appropriations—

1939-40.....	\$ 118,291,000
1940-41.....	752,045,000
1941-42.....	1,339,674,000
1942-43.....	3,724,249,000
1943-44.....	4,587,023,000
1944-45.....	4,418,446,000

#### War and Demobilization—

1945-46.....	4,002,949,000
--------------	---------------

#### Demobilization and Reconversion—

1946-47.....	1,314,798,000
--------------	---------------
